Common Eye Diseases and Their Management N.R.

Galloway, 2013-11-11 This book is intended for the medical student and non specialist postgraduate It is being published at a time when hospital waiting lists for eye care in Great Britain have reached record levels and the need for more teaching at medical student level is becoming imperative In many medical schools the students have very little exposure to the specialty some students none at all This may be because in past years the emphasis has been on teaching ophthalmology at a postgraduate level and a considerable development of postgraduate teaching has occurred It had been inferred that more exposure of qualified general practitioners to the subject would reduce the hospital waiting lists since more eye care would take place in general practice It would appear that the reverse has taken place general practitioners being now more aware of eye problems send even more cases to the hospitals In the absence of an expansion of the hospital service there is an urgent need to improve primary care ophthalmology and this can best be done by placing more emphasis on the teaching of medical students It is against this background that the need to provide a new basic textbook in ophthalmology arises The book is therefore aimed primarily at the medical student It does however aim to make preliminary reading for the postgraduate student

Eye Diseases and their Management Nicholas R. Galloway, Winfried M. K. Amoaku, Peter H. Galloway, Andrew C Browning, 2006-06-04 Since the last edition was published the teaching of Ophthalmology at primary care level has become more rather than less important The specialty has developed more subspecialties and the referring doctor has to have a good knowledge of these in order to make appropriate referrals An increased emphasis on screening has made it necessary for the primary care doctor to have a basic knowledge of eye diseases This applies particularly to glaucoma and diabetic eye disease The management of eye conditions in the elderly is also an important and increasing primary care problem Essential for medical students and general practitioners as well as optometrists and nurses the book is problem orientated and deals with

the science of Ophthalmology at a basic level This third edition includes more and better colour illustrations and the text is kept simple but explanatory The authors aim is to avoid technical terms where they can be replaced by plain English
