Combat Aircraft of the United States Air Force Michael Green, 2016-07-30 When the United States Army Signal Corps created the Aeronautical Division in August 1907 it had a mission to take charge of all matters pertaining to military ballooning air machines and all kindred matters That small inconsequential portion of the US Army would grow progressively over the many decades to become a separate service named the US Air Force in 1947 following the Second World War Overnight it became the world's most powerful military establishment able to deliver conventional and nuclear ordnance anywhere around the globe Today's cutting edge example of this power projection is the supersonic bat-winged B 2 Spirit stealth bomber which can fly at an altitude of 50 000 feet and is built of carbon graphite composite materials The B 2 Spirit is a far cry from the early days of the service when it relied on fragile prop driven wood and fabric aerial platforms such as the Wright Type B which could barely reach an altitude of 100 feet In between have been such iconic Second World War aircraft as the P 51 Mustang and P 47 Thunderbolt fighters and bombers such as the B 25 Mitchell B 17 Flying Fortress and B 29 Super Fortress which dropped the first Atomic Bomb in 1945 The Cold War demanded ever more powerful aircraft such as the B 58 Hustler and B 52 Stratofortress and fighters including the F 86 Sabre F 104 Starfighter and F 4 Phantom All these aircraft and more are vividly illustrated and described in detail in this superb Images of War publication

Tiger Check Steven A. Fino, 2017-11-01 How did American fighter pilots respond to the challenges posed by increasing automation Spurred by their commanders during the Korean War to be tigers aggressive and tenacious American fighter pilots charged headlong into packs of fireball spewing

enemy MiGs relying on their keen eyesight piloting finesse and steady trigger fingers to achieve victory But by the 1980s American fighter pilots vanquished their foes by focusing on a four inch square cockpit display manipulating electromagnetic waves and launching rocket propelled guided missiles from miles away In this new era of automated long range air combat can fighter pilots still be considered tigers Aimed at scholars of technology and airpower aficionados alike Steven A Fino's Tiger Check offers a detailed study of air to air combat focusing on three of the US Air Force's most famed aircraft the F 86E Sabre the F 4C Phantom II and the F 15A Eagle Fino argues that increasing fire control automation altered what fighter pilots actually did during air to air combat Drawing on an array of sources as well as his own decade of experience as an F 15C fighter pilot Fino unpacks not just the technological black box of fighter fire control equipment but also fighter pilots attitudes toward their profession and their evolving aircraft He describes how pilots grappled with the new technologies acutely aware that the very systems that promised to simplify their jobs while increasing their lethality in the air also threatened to rob them of the quintessential albeit mythic fighter pilot experience Finally Fino explains that these new systems often required new unique skills that took time for the pilots to identify and then develop Eschewing the typical great machine or great pilot perspectives that dominate aviation historiography Tiger Check provides a richer perspective on humans and machines working and evolving together in the air The book illuminates the complex interactions between human and machine that accompany advancing automation in the workplace **McDonnell Douglas F-15 Eagle** Dennis R. Jenkins, 1997 This top flight series provides a review of the world's most exciting combat aircraft
