Ocean Engineering Studies: Acrylic windows, short-term pressurization Jerry D. Stachiw, 1990 **Automated Face Analysis: Emerging Technologies and Research** Kim, Daijin, Sung, Jaewon, 2009-03-31 This book provides related theoretical background to understand the overall configuration and challenging problem of automated face analysis systems Provided by publisher **Face Detection and Gesture Recognition for Human-Computer Interaction** Ming-Hsuan Yang, Narendra Ahuja, 2012-12-06 Traditionally scientific fields have defined boundaries and scientists work on research problems within those boundaries However from time to time those boundaries get shifted or blurred to evolve new fields For instance the original goal of computer vision was to understand a single image of a scene by identifying objects their structure and spatial arrangements This has been referred to as image understanding Recently computer vision has gradually been making the transition away from understanding single images to analyzing image sequences or video understanding Video understanding deals with understanding of video sequences e g recognition of gestures activities facial expressions etc The main shift in the classic paradigm has been from the recognition of static objects in the scene to motion

based recognition of actions and events Video understanding has overlapping research problems with other fields therefore blurring the fixed boundaries Computer graphics image processing and video databases have obvious overlap with computer vision The main goal of computer graphics is to generate and animate realistic looking images and videos Researchers in computer graphics are increasingly employing techniques from computer vision to generate the synthetic imagery A good example of this is image based rendering and modeling techniques in which geometry appearance and lighting is derived from real images using computer vision techniques Here the shift is from synthesis to analysis followed by synthesis

of these requires something different Properly and efficiently addressing all of these factors will set you and your business apart from the competition In this book Smith focuses on teaching photographers how to conceptualize and produce portraits that will please the client He emphasizes that he is not creating his own artistic vision but that he is crafting what the client wants That is not to say the results aren't artful and creative Both of those things are very important as Smith shows but the main goal as a successful professional photographer is to create portraits that the subject wants to buy Smith advises photographers to be aware of a subject's self image when creating the portrait being sure not to light them in a manner that is unflattering or distorted Success in creating salable portraits relies as much on understanding people and the way our self image functions as it does understanding the proper techniques of lighting First Smith discusses the differences between face types and what to be aware of when setting up the lighting for each Proper metering and placement of light source are essential to controlling your highlights your shadowing and the transition area in between Establishing a system for modifying your lighting setup for each subject is emphasized The concept of Camera Sight or visualizing the finished photo ahead of time to look for potential problem areas is very important As Smith admits this skill comes with experience Where he once had to take many test shots to pick out these issues he is now able to see them before he shoots a single frame This is a skill that develops over time with training and practice The author then explains the differences between shooting in a studio and shooting on location both indoors and outdoors Different equipment is required for each scenario but the equipment used for shooting outdoors can even differ depending on the time of day While the most ideal natural light occurs just after sunrise or just before sunset most customers do not want to have their portraits taken at 5am or late in the day So the photographer needs to be prepared to shoot in the harsh midday sun In addition to lighting the face the photographer must find usable light to illuminate the background properly Smith details the lighting system he uses for outdoor portraiture and presents it in the context of his shooting experiences While studio shoots provide greater levels of comfort and consistency compared to a location shoot there are still many things required to get that perfect shot Properly applying fill accent light and shadowing are just as important in the studio as they are on location Understanding the concepts of traditional lighting allows the photographer to consistently create studio portraits that will please any customer The most important part of the face to light properly is the eyes Smith explains in detail what factors a successful photographer must consider to get the final portrait every client wants Whether it is a difference in the size of the client's eyes or ears asymmetrical lips or a crooked nose there are ways to light these to correct the differences Using artistry and creative vision to adapt from the comfort of studio shoots to the complicated and diverse demands of location shoots Smith provides the reader with the tools to capture what the client wants every time
