Structure Theorems of Unit Groups Eric Jespers, Ángel del Río, 2015-11-13 This two volume graduate textbook gives a comprehensive state of the art account of describing large subgroups of the unit group of the integral group ring of a finite group and more generally of the unit group of an order in a finite dimensional semisimple rational algebra Since the book is addressed to graduate students as well as young researchers all required background on these diverse areas both old and new is included Supporting problems illustrate the results and complete some of the proofs Volume 1 contains all the details on describing generic constructions of units and the subgroup they generate Volume 2 mainly is about structure theorems and geometric methods Without being encyclopaedic all main results and techniques used to achieve these results are included Basic courses in group theory ring theory and field theory are assumed as background

From Representation Theory to Homotopy Groups Donald M. Davis, 2002 A formula for the odd primary v_1 periodic homotopy groups of a finite H space in terms of its K theory and Adams operations has been obtained by Bousfield This work applies this theorem to give explicit determinations of the v_1 periodic homotopy groups of $E_8/5$ and $E_8/3$ thus completing the determination of all odd primary v_1 periodic homotopy groups of all compact simple Lie groups a project suggested by Mimura in 1989

Maximum Entropy of Cycles of Even Period Deborah Martina King, John Bruce Strantzen, 2001 This book is intended for graduate students and research mathematicians interested in dynamical systems and ergodic theory

Tilings of the Plane, Hyperbolic Groups and Small Cancellation Conditions Milé Krajčevski, 2001 This book is intended for

graduate students and research mathematicians interested in group theory and generalizations

Homotopy Theory of the Suspensions of the Projective Plane Jie Wu, 2003 Investigates the homotopy theory of the suspensions of the real projective plane This book computes the homotopy groups up to certain range It also studies the decompositions of the self smashes and the loop spaces with some applications to the Stiefel manifolds

Homotopy Theory of Diagrams Wojciech Chachólski, Jérôme Scherer, 2002 In this paper the authors develop homotopy theoretical methods for studying diagrams In particular they explain how to construct homotopy colimits and limits in an arbitrary model category The key concept introduced is that of a model approximation A model approximation of a category \mathcal{C} with a given class of weak equivalences is a model category \mathcal{M} together with a pair of adjoint functors $\mathcal{M} \rightleftarrows \mathcal{C}$ which satisfy certain properties The key result says that if \mathcal{C} admits a model approximation then so does the functor category $\text{Fun } I, \mathcal{C}$

On the Foundations of Nonlinear Generalized Functions I and II Michael Grosser, 2001 In part 1 of this title the authors construct a diffeomorphism invariant Colombeau type differential algebra canonically containing the space of distributions in the sense of L Schwartz Employing differential calculus in infinite dimensional convenient vector spaces previous attempts in this direction are unified and completed Several classification results are achieved and applications to nonlinear differential equations involving singularities are given

Nearrings and Nearfields Hubert Kiechle, Alexander Kreuzer, Momme Johs Thomsen, 2005-04-19 The present volume is the Proceedings of the 18th International Conference on Nearrings and Nearfields held at the Helmut Schmidt Universit t Universit t der Bundeswehr Hamburg from July 27 August 3 2003 It contains the written versions of the lectures by the five invited speakers These concern recent developments of planar nearrings nearrings of mappings group nearrings and loop nearrings One of them is a long and very substantial research paper The Z Constrained Conjecture They are followed by 13 contributions reflecting the diversity of the subject of nearrings and related structures Besides the purely algebraic structure theory these papers show many connections of nearring theory with group theory combinatorics geometries and topology They all contain original research

The Submanifold Geometries Associated to Grassmannian Systems Martina Brück, 2002 This work is intended for graduate students and research mathematicians interested in differential geometry and partial differential equations

Topological Invariants for Projection Method Patterns Alan Forrest, John Hutton, Johannes Kellendonk, 2002 This memoir develops discusses and compares a range of commutative and non commutative invariants defined for projection method tilings and point patterns The projection method refers to patterns particularly the quasiperiodic patterns constructed by the projection of a strip of a high dimensional integer lattice to a smaller dimensional Euclidean space In the first half of the memoir the acceptance domain is very general any compact set which is the closure of its interior while in the second half the authors concentrate on the so called canonical patterns The topological invariants used are various forms of K theory and cohomology applied to a variety of both C DEGREES algebras and dynamical systems derived from such a p

Decomposition of a Covering of $GL(r)$: the Borel case Heng Sun, 2002 Let F be a number field and \mathbb{A} the ring of adèles over F Suppose $\overline{G} \subset GL(r, \mathbb{A})$ is a metaplectic cover of $G \subset GL(r, \mathbb{A})$ which is given by the n th Hilbert symbol on \mathbb{A}

A Geometric Setting for Hamiltonian Perturbation Theory Anthony D. Blaom, 2001 In this text the perturbation theory of non commutatively integrable systems is revisited from the point of view of non Abelian symmetry groups Using a co ordinate system intrinsic to the geometry of the symmetry the book generalizes and geometrizes well known estimates of Nekhoroshev 1977 in a class of systems having almost G invariant Hamiltonians These estimates are shown to have a natural interpretation in terms of momentum maps and co adjoint orbits The geometric framework adopted is described explicitly in examples including the Euler Poincaré rigid body

The AB Program in Geometric Analysis: Sharp Sobolev Inequalities and Related Problems Olivier Druet, Emmanuel Hebey, 2002 Function theory and Sobolev inequalities have been the target of investigation for many years Sharp constants in these inequalities constitute a critical tool in geometric analysis The AB programme is concerned with sharp Sobolev inequalities on compact Riemannian manifolds This text summarizes the results of contemporary research and gives an up to date report on the field

Connectivity Properties of Group Actions on Non-Positively Curved Spaces Robert Bieri, Ross Geoghegan, 2003 Generalizing the Bieri Neumann Strebel Renz Invariants this Memoir presents the foundations of a theory of not necessarily discrete actions ρ of a suitable group G by isometries on a proper CAT 0 space M The passage from groups G to group actions ρ implies the introduction of Sigma invariants $\Sigma_k \rho$ to replace the previous $\Sigma_k G$ introduced by those authors Their theory is now seen as a special case of what is studied here so that readers seeking a detailed treatment of their theory will find it included here as a special case We define and study controlled k connectedness CC_k of ρ both over M and over end points e in the boundary at infinity $\partial_\infty M$ $\Sigma_k \rho$ is by definition the set of all e over which the action is $k+1$ connected A central theorem the Boundary Criterion says that $\Sigma_k \rho \subset \partial_\infty M$ if and only if ρ is CC_{k+1} over M An Openness Theorem says that CC_k over M is an open condition on the space of isometric actions ρ of G on M Another Openness Theorem says that $\Sigma_k \rho$ is an open subset of $\partial_\infty M$ with respect to the Tits metric topology When ρ is a discrete group of isometries the property CC_{k+1} is equivalent to $\ker \rho$ having the topological finiteness property type F_{k+1} More generally if the orbits of the action are discrete CC_{k+1} is equivalent to the point stabilizers having type F_{k+1} In particular for $k=2$ we are characterizing finite presentability of kernels and stabilizers Examples discussed include locally rigid actions translation actions on vector spaces especially those by metabelian groups

Strong Boundary Values, Analytic Functionals, and Nonlinear Paley-Wiener Theory Jean-Pierre Rosay, Edgar Lee Stout, 2001 This work is intended for graduate students and research mathematicians interested in functional analysis several complex variables analytic spaces and differential equations

Basic Global Relative Invariants for Homogeneous Linear Differential Equations Roger Chalkley, 2002 Given any fixed integer $m \geq 3$ the author presents simple formulas for $m-2$ algebraically independent polynomials over \mathbb{Q} having the remarkable

property with respect to transformations of homogeneous linear differential equations of order m that each polynomial is both a semi invariant of the first kind with respect to changes of the dependent variable and a semi invariant of the second kind with respect to changes of the independent variable These relative invariants are suitable for global studies in several different contexts and do not require Laguerre Forsyth reductions for their evaluation In contrast all of the general formulas for basic relative invariants that have been proposed by other researchers during the last 113 years are merely local ones that are either much too complicated or require a Laguerre Forsyth reduction for each evaluation

Approximation and Entropy Numbers of Volterra Operators with Application to Brownian Motion

Mikhail Anatol'evich Lifshits, Werner Linde, 2002 This text considers a specific Volterra integral operator and investigates its degree of compactness in terms of properties of certain kernel functions In particular under certain optimal integrability conditions the entropy numbers $e_n(T_{\rho, \psi})$ satisfy $\|c_1\|_{\rho, \psi} = 0$

Triangulations of Oriented Matroids Francisco Santos, 2002 We consider the concept of triangulation of an oriented matroid We provide a definition which generalizes the previous ones by Billera Munson and by Anderson and which specializes to the usual notion of triangulation or simplicial fan in the realizable case Then we study the relation existing between triangulations of an oriented matroid M and extensions of its dual M^* via the so called lifting triangulations We show that this duality behaves particularly well in the class of Lawrence matroid polytopes In particular that the extension space conjecture for realizable oriented matroids is equivalent to the restriction to Lawrence polytopes of the Generalized Baues problem for subdivisions of polytopes We finish by showing examples and a characterization of lifting triangulations
