Instrumentation and Research Programmes for Small Telescopes where small telescopes were defined as those ground based
instruments with apertures less than 1.5m The scientific goal of the symposium was to emphasise research programmes
which were more suited to smaller tele scopes on which frequent regular observations can be made A wide variety of topics
on instrumentation photometry spectroscopy and polarimetry of objects in the solar system to extragalactic systems were
discussed Each of the four scientific days of the symposium comprised a number of invited review papers contributed oral
papers and discussion sessions devoted purely to the large number 4 of poster papers An introductory paper on the research
potential of small telescopes sets the scene for the symposium The proceedings have then been divided into three sections
Section I Telescopes and instrumentation Section II Photometric research programmes Section III Spectroscopic research
programmes The diversity of topics within each of these sections indicated the extent to which small telescopes have and can
contribute greatly to astronomical research Dr J A Graham s summary of the symposium which illustrates the opportunities
available with small telescopes concludes these proceedings As in all symposia the importance of the discussion following
