Topics from the Theory of Numbers Emil Grosswald,2010-02-23 Many of the important and creative developments in modern mathematics resulted from attempts to solve questions that originate in number theory The publication of Emil Grosswald s classic text presents an illuminating introduction to number theory Combining the historical developments with the analytical approach Topics from the Theory of Numbers offers the reader a diverse range of subjects to investigate including 1 divisibility 2 congruences 3 the Riemann zeta function 4 Diophantine equations and Fermat s conjecture 5 the theory of partitions Comprehensive in nature Topics from the Theory of Numbers is an ideal text for advanced undergraduates and graduate students alike *Handbook of Mathematics* Thierry Vialar,2016-12-07 The book revised consists of XI Parts and 28 Chapters covering all areas of mathematics It is a tool for students scientists engineers students of many disciplines teachers professionals writers and also for a general reader with an interest in mathematics and in science It provides a wide range of mathematical concepts definitions propositions theorems proofs examples and numerous illustrations The difficulty level can vary depending on chapters and sustained attention will be required for some The structure and list of Parts are quite classical I Foundations of Mathematics II Algebra III Number Theory IV Geometry V Analytic Geometry VI Topology VII Algebraic Topology VIII Analysis IX Category Theory X Probability and Statistics XI Applied Mathematics Appendices provide useful lists of symbols and tables for ready reference Extensive cross references allow readers to find related terms concepts and items by page number heading and objet such as theorem definition example etc The publisher s hope is that this book slightly revised and in a convenient format will serve the needs of readers be it for study teaching exploration work or research *Lectures Introductory to the Theory of Functions of Two Complex Variables* Andrew Russell Forsyth,1914 Almost Global Solutions of Capillary-Gravity Water Waves Equations on the Circle Massimiliano Berti,Jean-Marc Delort,2018-11-02 The goal of this monograph is to prove that any solution of the Cauchy problem for the capillary gravity water waves equations in one space dimension with periodic even in space small and smooth enough initial data is almost globally defined in time on Sobolev spaces provided the gravity capillarity parameters are taken outside an exceptional subset of zero measure In contrast to the many results known for these equations on the real line with decaying Cauchy data one cannot make use of dispersive properties of the linear flow Instead a normal forms based procedure is used eliminating those contributions to the Sobolev energy that are of lower degree of homogeneity in the solution Since the water waves equations form a quasi linear system the usual normal forms approaches would face the well known problem of losses of derivatives in the unbounded transformations To overcome this after a paralinearization of the capillary gravity water waves equations we perform several paradifferential reductions to obtain a diagonal system with constant coefficient symbols up to smoothing remainders Then we start with a normal form procedure where the small divisors are compensated by the previous paradifferential regularization The reversible structure of the water waves

equations and the fact that we seek solutions even in space guarantees a key cancellation which prevents the growth of the Sobolev norms of the solutions   Conformal and Harmonic Measures on Laminations Associated with Rational Maps Vadim A. Kaimanovich,Mikhail Lyubich,2005 This book is dedicated to Dennis Sullivan on the occasion of his 60th birthday The framework of affine and hyperbolic laminations provides a unifying foundation for many aspects of conformal dynamics and hyperbolic geometry The central objects of this approach are an affine Riemann surface lamination mathcal A and the associated hyperbolic 3 lamination mathcal H endowed with an action of a discrete group of isomorphisms This action is properly discontinuous on mathcal H which allows one to pass to the quotient hyperbolic lamination mathcal M Our work explores natural geometric measures on these laminations We begin with a brief self contained introduction to the measure theory on laminations by discussing the relationship between leafwise transverse and global measures The central themes of our study are leafwise and transverse conformal streams on an affine lamination mathcal A analogues of the Patterson Sullivan conformal measures for Kleinian groups harmonic and invariant measures on the corresponding hyperbolic lamination mathcal H the Anosov Sinai cocycle the corresponding basic cohomology class on mathcal A which provides an obstruction to flatness and the Busemann cocycle on mathcal H A number of related geometric objects on laminations in particular the backward and forward Poincare series and the associated critical exponents the curvature forms and the Euler class currents and transverse invariant measures lambda harmonic functions and the leafwise Brownian motion are discussed along the lines The main examples are provided by the laminations arising from the Kleinian and the rational dynamics In the former case mathcal M is a sublamination of the unit tangent bundle of a hyperbolic 3 manifold its transversals can be identified with the limit set of the Kleinian group and we show how the classical theory of Patterson Sullivan measures can be recast in terms of our general approach In the latter case the laminations were recently constructed by Lyubich and Minsky in LM97 Assuming that they are locally compact we construct a transverse delta conformal stream on mathcal A and the corresponding lambda harmonic measure on mathcal M where lambda delta delta 2 We prove that the exponent delta of the stream does not exceed 2 and that the affine laminations are never flat except for several explicit special cases rational functions with parabolic Thurston orbifold   **Statistical Issues in Allocating Federal Funds and Estimation of Local Government Finances** ,1977   **Handbuch der Astrophysik** Gustav Eberhard,1928   *Uniqueness Theory of Meromorphic Functions* Chung-Chun Yang,Hong-Xun Yi,2004-10-04 This book is the first monograph in the field of uniqueness theory of meromorphic functions dealing with conditions under which there is the unique function satisfying given hypotheses Developed by R Nevanlinna a Finnish mathematician early in the 1920 s research in the field has developed rapidly over the past three decades with a great deal of fruitful results This book systematically summarizes the most important results in the field including many of the authors own previously unpublished results In addition useful skills and simple proofs are introduced This book is suitable for higher level and graduate students

Christos Flytzanis,Jean L. Oudar,2012-12-06 The field of nonlinear optics has witnessed a tremendous evolution since its beginnings in the early sixties Its frontiers have been extended in many direc tions and its techniques have intruded upon many areas of both fundamental and practical interest The field itself has been enriched with many new phe nomena and concepts that have further extended its scope and strengthened its connection with other areas As a consequence it is becoming increasingly unrealistic to expect to cover the different facets and trends of this field in the lectures or proceed ings of a summer school however advanced these may be However much of the current progress and interest in this field springs to a large extent from the promise and expectation that highly performing all optical devices that exploit and operate on the principles of nonlinear optics will constitute an important branch of future technology and will provide new alternatives in information processing and transmission The conception of new devices in general requires an intricate and bold combination of facts and methods from most diverse fields in order to perform functions and operations that fit into an overall technological ensemble **Algebraic Methods: Theory, Tools and Applications** Martin Wirsing,Jan A.
