Economic Development Theodore Morgan, 1975 The low income economy and society Characteristics and portraits Statistics for LDCs errors and appropriateness Income grumbles measuring economic development Modeling economic growth Nutrition disease and climate Population and development Agriculture and development **Economic Development** Charles P. Kindleberger, 1965 China's Economic Development Strategies: Transformation And Innovation Rui Liu, 2020-04-28 China is a powerful engine of the global economy and the country's rise is undoubtedly the outcome of its protracted campaign of designing and implementing national development strategies since the founding of the People's Republic of China in 1949 This book reviews the transformation and innovation of China's economic development strategies especially Deng Xiaoping's Three Step strategy and Xi Jinping's internal and external strategies By introducing the concept of strategic paradigm it analyzes the theoretical basis of myriads of economic development strategies and predicts China's choice With the evolutionary process and the outstanding problems in national development planning as the main thread it discusses the improvement of the national planning system specifically of the national overall planning system the regional planning system the interplay and conflict between regional planning It also studies the reform of city county planning system major function oriented zones MFOZs and planning legislation and institutionalization It also attempts to put forward proposals to coordinate the interests of planning departments and make different types of planning at different administrative levels compatible Sustainable Development: Concepts, Rationalities and Strategies Sylvie Faucheux, Martin O'Connor, Jan van der Straaten, 2013-03-14 3 decision support techniques that do not depend exclusively on market incentives and monetary valuation The World Conservation Strategy published by the mCN 1980 recognised the full dimensions of these problems and introduced the concept of sustainable development placing the emphasis on the exploitation of natural systems and the use of biological natural resources within limits so that the availability of these resources for use by future generations would not be jeopardised by the current use of them At this time the imposition of quotas and the definition of critical loads and environmental standards were suggested as the sorts of instruments necessary to cope with the problems of limited availability of environmental resources Although the mCN publication did not obtain a high international profile the idea of policy norms to respect critical loads has become quite widely accepted in the environmental policymaking of Western countries This has often put the policy agencies in difficult situations Polluting industries are inclined to argue that the critical loads are defined too restrictively The complexity and time lags of ecological effects makes it hard to say exactly what constitutes a critical load beyond which there will be irreversible damage and lobbying interests can play on these uncertainties to try and weaken the environmental standards In addition polluting industries can use the argument of negative impacts on the economy particularly as regards employment and export prospects to blackmail governments regulatory agencies and the general public **Regional Economic Development**
