Handbook of Experimental Economic Methodology Guillaume R. Fréchette,A. Schotter,2015 The Handbook of Experimental Economic Methodology edited by Guillaume R Fr chette and Andrew Schotter aims to confront and debate the issues faced by the growing field of experimental economics For example as experimental work attempts to test theory it raises questions about the proper relationship between theory and experiments As experimental results are used to inform policy the utility of these results outside the lab is questioned and finally as experimental economics tries to integrate ideas from other disciplines like psychology and neuroscience the question of their proper place in the discipline of economics becomes less clear This book contains papers written by some of the most accomplished scholars working at the intersection of experimental behavioral and theoretical economics talking about methodology It is divided into four sections each of which features a set of papers and a set of comments on those papers The intention of the volume is to offer a place where ideas about methodology could be discussed and even argued Some of the papers are contentious a healthy sign of a dynamic discipline while others lay out a vision for how the authors think experimental economics should be pursued This exciting and illuminating collection of papers brings light to a topic at the core of experimental economics Researchers from a broad range of fields will benefit from the exploration of these important questions

Johnson, Marianne F. Johnson, Warren J. Samuels, 2004-05-20 Under the impressive editorship of Warren Samuels et al this book addresses the state of the history of economic thought today An important contribution to the study of the history of economics this eagerly awaited book will develop an unsurprisingly large following **The Economics of Urban Property Markets** Paschalis Arvanitidis, 2014-08-13 This book examines the relationship between the property market and urban economy The stimulus for this work was provided by the seemingly ever accelerating process of urban economic change and the noticeable failure of existing studies to adequately explore the pivotal role that the property market plays in this process Drawing on institutional economics the central argument of the book is that the property market as an institution is a mediator through which urban economic potential can be realised and served In developing this argument the book provides a critical realist ontological framework that advances understanding of the institutional structure of the economy and the complex interrelation between the institutional environment and human agency as well as a holistic theoretical framework of urban economic change where appropriate emphasis is placed on the specific mechanisms processes and dynamics through which the built environment is provided Arvanitidis also explores an institutional conceptualisation of property market efficiency defined in terms of the ability of the market institution to adapt its structure and to provide outcomes that the economy requires To inform empirical research on the developed concepts the book also offers a generic analytical approach specifying appropriate research methods and techniques for investigation along with a specific research design providing an operational framework that translates developed theory into empirical practice The book's primary contribution therefore lies in its delineation of a holistic research programme to conceptualise the property market as an institution and to explore its role within the urban economy
