

# The Economics of Industrial Innovation

THIRD EDITION

Chris Freeman and Luc Soete

Technical innovation has moved to center stage in contemporary debates on economic theory and policy, and Chris Freeman and Luc Soete have played a prominent part in these debates. For this new edition of *The Economics of Industrial Innovation*, they have rewritten all the existing chapters and added ten new ones that address recent advances in theory and in policymaking. In the new chapters they deal with the international dimensions of technological change including underdevelopment, technology transfer, international trade, and globalization. They have also strengthened the historical account of the rise of new technologies, a main feature of earlier editions. They take advantage of their experience on projects for the OECD, the European Union, and industry in other chapters on "The Information Society" and on environmental issues, as well as in the updated discussion of science and technology policy.

**Chris Freeman** is Professor Emeritus at the Science Policy Research Unit at the University of Sussex, U.K. **Luc Soete** is Director of MERIT (Maastricht Economics Research Institute on Innovation and Technology) and Professor of International Economics at the University of Maastricht, the Netherlands.

**Development** Anant Kamath, 2014-11-27 This book offers an innovative examination of how low technology industries operate Based on extensive fieldwork in India the book fuses economic and sociological perspectives on information sharing by means of informal interaction in a low technology cluster in a developing country In doing so the book sheds new light on settings where economic relations arise as emergent properties of social relations This book examines industrial innovation and microeconomic network behaviour among producers and clusters perceiving knowledge diffusion to be a socially spatial as much as a geographically spatial phenomenon This is achieved by employing two methods simulation modelling and quantitative qualitative and historical social network analysis The simulation model based on its findings motivates two empirical studies one descriptive case and one network study of low tech rural and semi urban traditional technology clusters in Kerala state in southern India These cases demonstrate two contrasting stories of how social cohesion either supports or thwarts informal information sharing and learning This book pushes towards an economic sociology approach to understanding knowledge diffusion and technological learning which perceives innovation and learning as being more social processes than the mainstream view perceives them to be In doing so it makes a significant contribution to the literature on defensive innovation and the role of networks in technological innovation and knowledge diffusion as well as to policy studies of Indian small firm and traditional technology clusters *Advisory Committee on Industrial Innovation* United States.
