Ecology and Earth History Richard Nathaniel T-W-Fiennes,1976 *Ecology, Environmental Science & Conservation* Singh J.S., Singh S.P. & Gupta S.R.,2014 Over the years the scope of our scientific understanding and technical skills in ecology and environmental science have widened significantly with increasingly greater emphasis on societal issues In this book an attempt has been made to give basic concepts of ecology environmental science and various aspects of natural resource conservation The topics covered primarily deal with environmental factors affecting organisms adaptations biogeography ecology of species populations and species interactions biotic communities and ecosystems environmental pollution stresses caused by toxics global environmental change exotic species invasion conservation of biodiversity ecological restoration impact assessment application of remote sensing and geographical information system for analysis and management of natural resources and approaches of ecological economics The main issues have been discussed within the framework of sustainability considering humans as part of ecosystems and recognising that sustainable development requires integration of ecology with social sciences for policy formulation and implementation *The Journal of Environmental Sciences* ,1977 **An Environmental History of the World** J. Donald Hughes,2002-09-26 An Environmental History of the World is a concise history from Ancient to Modern times of the interaction between human societies and the other forms of life that inhabit our planet This original work follows a chronological path through the history of mankind in relationship to ecosystems around the world Each chapter concentrates on a general period in human history which has been characterised by large scale changes in the relationship of human societies to the biosphere and gives three case studies that illustrate the significant patterns occurring at that time Little environmental or historical knowledge is assumed from the reader in this introduction to environmental history Climate Change Biology ,2011 Climate change has moved from being a contested phenomenon to the top of the agenda at global summits Climate Change Biology is the first major textbook to address the critical issue of how climate change may affect life on the planet and particularly its impact on human populations Presented in four parts the first deals extensively with the physical evidence of climate change and various modelling efforts to predict its future Biological responses are addressed in the second part from the individual s physiology to populations and ecosystems and further to considering adaptation and evolution The third part examines the specific impact climate change may have on natural resources agriculture and forestry The final part considers research on the cutting edge of impact prediction and the practical and philosophical limitations on our abilities to predict these impacts This text will be a useful asset to the growing number of both undergraduate and graduate courses on impacts of climate change as well as providing a succinct overview for researchers new to the field **Ocean Ecology** J. Emmett Duffy,2021-08-10 A comprehensive introduction to ocean ecology and a new way of thinking about ocean life Marine ecology is more interdisciplinary broader in scope and more intimately linked to human activities than ever before Ocean Ecology provides advanced undergraduates

graduate students and practitioners with an integrated approach to marine ecology that reflects these new scientific realities and prepares students for the challenges of studying and managing the ocean as a complex adaptive system This authoritative and accessible textbook advances a framework based on interactions among four major features of marine ecosystems geomorphology the abiotic environment biodiversity and biogeochemistry and shows how life is a driver of environmental conditions and dynamics Ocean Ecology explains the ecological processes that link organismal to ecosystem scales and that shape the major types of ocean ecosystems historically and in today's Anthropocene world Provides an integrated new approach to understanding and managing the ocean Shows how biological diversity is the heart of functioning ecosystems Spans genes to earth systems surface to seafloor and estuary to ocean gyre Links species composition trait distribution and other ecological structures to the functioning of ecosystems Explains how fishing fossil fuel combustion industrial fertilizer use and other human impacts are transforming the Anthropocene ocean An essential textbook for students and an invaluable resource for practitioners

Environmental Biology & Toxicology Sharma P D,
Environmental Infrastructure in African History Emmanuel Kreike, 2013-05-13 Environmental Infrastructure in African History offers a new approach for analyzing and narrating environmental change Environmental change conventionally is understood as occurring in a linear fashion moving from a state of more nature to a state of less nature and more culture In this model non Western and premodern societies live off natural resources whereas more modern societies rely on artifact or nature that is transformed and domesticated through science and technology into culture In contrast Emmanuel Kreike argues that both non Western and premodern societies inhabit a dynamic middle ground between nature and culture He asserts that humans in collaboration with plants animals and other animate and inanimate forces create environmental infrastructure that constantly is remade and reimagined in the face of ongoing processes of change

Biodiversity and Environmental Philosophy Sahotra Sarkar, 2005-09-19 This book explores the epistemological and ethical issues at the foundations of environmental philosophy emphasising the conservation of biodiversity Sahota Sarkar criticises attempts to attribute intrinsic value to nature and defends an anthropocentric position on biodiversity conservation based on an untraditional concept of transformative value Unlike other studies in the field of environmental philosophy this book is as much concerned with epistemological issues as with environmental ethics It covers a broad range of topics including problems of explanation and prediction in traditional ecology and how individual based models and Geographic Information Systems GIS technology is transforming ecology Introducing a brief history of conservation biology Sarkar analyses the consensus framework for conservation planning through adaptive management He concludes with a discussion of directions for theoretical research in conservation biology and environmental philosophy

Stressors in the Marine Environment Martin Solan, Nia Whiteley, 2016-03-10 A multitude of direct and indirect human influences have significantly altered the environmental conditions composition and diversity of marine communities However understanding and predicting the combined impacts of single and multiple stressors is particularly challenging because observed ecological feedbacks are underpinned by a number of physiological and behavioural responses that reflect stressor type severity and timing Furthermore integration between the traditional domains of physiology and ecology tends to be fragmented and focused towards the effects of a specific stressor or set of circumstances This novel volume summarises the latest research in the physiological and ecological responses of marine species to a comprehensive range of marine stressors including chemical and noise pollution ocean acidification hypoxia UV radiation thermal and salinity stress before providing a perspective on future outcomes for some of the most pressing environmental issues facing society today Stressors in the Marine Environment synthesises the combined expertise of a range of international researchers providing a truly interdisciplinary and accessible summary of the field It is essential reading for graduate students as well as professional researchers in environmental physiology ecology marine biology conservation biology and marine resource management It will also be of particular relevance and use to the regulatory agencies and authorities tasked with managing the marine environment including social scientists and environmental economists
