Ecology And Restoration Of Northern California Coastal Dunes:

Ecology and Restoration of Northern California Coastal Dunes Andrea J. Pickart, John Orvel Sawyer, 1998 Restoration of Coastal Dunes Luisa M Martínez, Juan B. Gallego-Fernández, Patrick A. Hesp, 2013-01-30 The continuously growing human population along the world's coasts will exacerbate the impact of human activities on all coastal environments. Restoration activities will therefore become increasingly important. In particular, sandy shores and coastal dunes will require significant restoration efforts because they are preferred sites for human settlement, industrial and urban development, and tourism. With this book, experts in the field present a comprehensive review of restoration studies and activities where successful and failed studies or approaches from around the world are contrasted and compared. A major asset the book provides is a compendium of studies showing that coastal dune restoration has many definitions and thus leads to many different actions. This volume addresses those with an interest in conservation ecology and biology, coastal dune dynamics and geomorphology, and coastal management who are seeking information on the different strategies for coastal dune restoration applied in different regions of the world. Finally, it will be a valuable resource for coastal scientists and planners as well as for local and state officials, residents of coastal communities, environmental advocates, and developers.

Coastal Dunes M. L. Martínez, Norbert P. Psuty, 2007-09-14 Coastal dunes occur in almost every latitude from tropical to polar and have been substantially altered by human activities. Many are already severely and irreversibly degraded. Although these ecosystems have been studied for a long time as early as 1835, there has been a strong emphasis on the mid-latitude dune systems and a lack of attention given to the tropics where unfortunately much of the modern exploitation and coastal development for tourism is occurring. This book brings together coastal dune specialists from tropical and temperate latitudes which together cover a wide set of topics including geomorphology, community dynamics, ecophysiology, biotic interactions, and environmental problems and conservation. A major product of this book is a set of recommendations for future research identifying relevant topics where detailed knowledge is still lacking. It also identifies management tools that will promote and maintain the rich diversity of the dune environments in the context of continuing coastal development.

Ecosystems of California Harold Mooney, Erika Zavaleta, 2016-01-19 This long anticipated reference and sourcebook for California's remarkable ecological abundance provides an integrated assessment of each major ecosystem type, its distribution, structure, function, and management. A comprehensive synthesis of our knowledge about this biologically diverse state, *Ecosystems of California* covers the state from oceans to mountaintops using multiple lenses: past and present flora and fauna, aquatic and terrestrial, natural and managed. Each chapter evaluates natural processes for a specific ecosystem, describes drivers of change, and discusses how that ecosystem may be altered in the future. This book also explores the drivers of California's ecological patterns and the history of the state's various ecosystems, outlining how the challenges of climate change and invasive species and opportunities for regulation and stewardship could potentially affect the state's ecosystems. The text explicitly incorporates

both human impacts and conservation and restoration efforts and shows how ecosystems support human well being Edited by two esteemed ecosystem ecologists and with overviews by leading experts on each ecosystem this definitive work will be indispensable for natural resource management and conservation professionals as well as for undergraduate or graduate students of California's environment and curious naturalists

Invasive Plants of California's Wildlands Carla C. Bossard, John M. Randall, Marc C. Hoshovsky, 2000 Invasive nonnative plants threaten native species with habitat loss displacement and severe population declines thus seriously reducing biodiversity Invasive Plants of California's Wildlands is a tremendous source for land managers and others who are interested in protecting the rich natural heritage of California and surrounding states John C. Sawhill President and CEO The Nature Conservancy

Terrestrial Vegetation of California, 3rd Edition Michael Barbour, Todd Keeler-Wolf, Allan A. Schoenherr, 2007-07-17 This completely new edition of Terrestrial Vegetation of California clearly documents the extraordinary complexity and richness of the plant communities and of the state and the forces that shape them This volume is a storehouse of information of value to anyone concerned with meeting the challenge of understanding managing or conserving these unique plant communities under the growing threats of climate change biological invasions and development Harold Mooney Professor of Environmental Biology Stanford University The plants of California are under threat like never before Traditional pressures of development and invasive species have been joined by a newly recognized threat human caused climate change It is essential that we thoroughly understand current plant community dynamics in order to have a hope of conserving them This book represents an important well timed advance in knowledge of the vegetation of this diverse state and is an essential resource for professionals students and the general public alike Brent Mishler Director of the University Jepson Herbaria and Professor of Integrative Biology University of California Berkeley

Seven Coastal Plants and the Myrtle's Silverspot Butterfly, 1998

Northwest California John O. Sawyer, 2006-08-15 Annotation Northwestern California is one of the most fascinating and biologically diverse regions of North America This summary of a complex past brings together geological botanical and zoological information to create a single natural history of one of the last unspoiled parts of California and the Pacific Northwest

Sand Dune Conservation, Management and Restoration J. Patrick Doody, 2012-09-17 This book deals with the development of temperate coastal sand dunes and the way these have been influenced by human activity The different states in which the habitat exists both for the beach foredune and inland dune are reviewed against the pressures exerted upon them Options for management are considered and the likely consequences of taking a particular course of action highlighted These options include traditional approaches to the conservation and management of wildlife and landscapes as well as habitat restoration The way the value of the areas changes under different management regimes is considered mainly from an environmental perspective Consideration is given to new approaches to management and restoration including adopting a more dynamic approach
