Hawkes In Flight:

Hawks In Flight Pete Dunne, David Sibley, Clay Sutton, 2024-04-16 Among the world's most popular birds, hawks can be some of the most difficult birds to identify. They're most often seen flying high above and at a distance. In the first edition of *Hawks in Flight*, Pete Dunne, David Sibley, and Clay Sutton presented a holistic method of hawk identification using general body shape, the way they move, and the places they are most likely to be seen. The new edition of the book that Roger Tory Peterson called a landmark integrates an array of carefully selected photographs, David Sibley's superb illustrations, and a clear, information-packed text and takes raptor identification to a higher level. This edition covers all of the raptors that breed in North America, including those with limited ranges in Florida, the Southwest, and Texas. Picking up where its predecessor ended by including two decades of raptor identification refinement, *Hawks in Flight* summarizes and places in users' hands an identification skill set that used to take years to master. The unique alchemy of Dunne, Sibley, and Sutton, including their collective experience of more than one hundred years watching hawks, make this book a singular achievement and a must-have for anyone interested in hawks.

The Biology of the Avian Respiratory System John N. Maina, 2017-04-28 The central focus of this book is the avian respiratory system. The authors explain why the respiratory system of modern birds is built the way it is and works the way that it does. Birds have been and continue to attract particular interest to biologists. The more birds are studied, the more it is appreciated that the existence of human kind on earth very much depends directly and indirectly on the existence of birds. Regarding the avian respiratory system, published works are scattered in biological journals of fields like physiology, behavior, anatomy, morphology, and ecology, while others appear in as far afield as paleontology and geology. The contributors to this book are world-renowned experts in their various fields of study. Special attention is given to the evolution, the structure, the function, and the development of the lung-air sac system. Readers will not only discover the origin of birds but will also learn how the respiratory system of theropod dinosaurs worked and may have transformed into the avian one. In addition, the work explores such aspects as swallowing mechanism in birds, the adaptations that have evolved for flight at extreme altitude, and gas exchange in eggs. It is a highly informative and carefully presented work that provides cutting-edge scientific insights for readers with an interest in the respiratory biology and the evolution of birds.

The Baseball Film in Postwar America Ron Briley, 2014-01-10 This work focuses on the baseball movie genre in the years following World War II, beginning with the 1948 biopic *The Babe* (Ruth Story) and ending with the 1962 Mickey Mantle/Roger Maris vehicle *Safe at Home*, when the consensus was that conflict should be limited in American society by emphasizing economic growth and a strong stand against Communism. This study of selected films indicates, however, that this strategy was not entirely effective. While offering a certain amount of nostalgia, these films could not provide shelter from the storm gathering in postwar America, which challenged conventional ideas of race, gender, and class and broke in the 1960s.
