 Symposia Series National strategies to minimize pollution including that from hazardous waste are evolving in both the
 United States and Canada Recent federal hazardous waste regulations in the United States promulgated under the authority
 of the Resource Conservation and Recovery Act of 1976 RCRA encourage the states to develop their own waste management
 programs patterned after federal specifications some states have developed progressive options Canadian hazardous waste
 management programs originate in the provinces However the federal government is increasingly involved in developing new
 treatment technologies guidelines for consistent management and control of waste across political boundaries The authors of
 this volume find that disposal is still the most common practice for handling hazardous waste in both countries despite the
 potential for alternative methods such as industrial process redesign for waste reduction waste detoxification recycling or
 incineration Nonetheless some waste will remain Sound disposal site selection criteria are prerequisite for industry and
 government credibility in site selection Only after accountability is established and recognized will the public lose symptoms
 of the NIMBY not in my backyard syndrome Even so public involvement in site selection in these countries should be
 expected for a site to be accepted All the while the three parties industry government and the public must balance the risk of
