Hazardous Waste Reducation in the Metal Finishing Industry PRC Environmental Management, Inc,1989-12-31
From the Foreword This book presents the results of a waste audit study for the metal finishing industry The study carried out for the State of California but applicable for metal finishers elsewhere identifies opportunities for waste reduction available to the metal finishing industry and develops procedures that can be used by metal finishers to assess their own waste reduction opportunities The study emphasizes technologies available to small and medium sized metal finishing plants Typically these shops operate a variety of physical chemical and electrochemical processes Chemical processes include degreasing cleaning pickling etching coating and electroless plating Electrochemical processes include plating and anodizing The tasks included in the study were 1 selecting metal finishing plants to include in the study 2 performing a waste audit at each selected plant 3 developing recommendations for implementing waste reduction technologies at each audited plant 4 discussing with facility representatives the feasibility of implementing the waste reduction recommendations and 5 developing this waste audit study report and methodology The study identifies three categories of waste reduction technologies that are available to metal finishers 1 source reduction 2 recycling and resource recovery and 3 alternative treatment The costs associated with implementing these technologies range from a few hundred dollars for making simple improvements in housekeeping and minor process modifications to tens of thousands of dollars for installing recovery or treatment units The benefits realized from implementing such improvements include reductions in material purchase and waste disposal costs as well as reduction in the liability
