Yang, 2012-12-06 Polymers continue to show almost amazing versatility We have always known that polymers could be used for trinkets toys and dishes Now however we are no longer surprised to encounter these adaptable materials in almost every place we look We find them in our cars tools electronic devices building materials etc The use of polymeric materials in medicine is also well documented in previous books by one of the Editors Gebelein and by others Likewise the use of polymeric materials in pharmaceutical applications especially in controlled release systems is also well established Nevertheless the use of these ubiquitous chemicals is far less obvious in the field of cosmetics although modern cosmetic preparations rely heavily on polymers and this trend is certain to increase This book brings together much of the basic information on polymers in cosmetics and compares this usage with similar applications in pharmaceutical and medical applications Cosmetics like medicine and pharmacy dates back to antiquity We can find uses of perfumes balms and ointments in various old books such as the Bible For example the use of ointments and balms is noted more than thirty eight times and perfumes and related materials are cited at least twenty nine times in the Bible

Viscoelastics in Ophthalmic Surgery H.B. Dick, Oliver Schwenn, 2012-12-06 It will be difficult to find an ophthalmic surgeon who will gladly do his work entirely without viscoelastics Within just a few years this group of substances has enlarged the field of ophthalmic surgery enormously Many procedures have become safer and simpler and other techniques could only be developed because of the availability of viscoelastics Especially cataract surgery and implantation of intraocular lenses have benefitted Implantation of an intraocular lens can be performed much more reliably into the capsular bag without endangering the posterior capsule Implantation of foldable lenses would be almost impossible without viscoelastics However other surgical maneuvers also necessitate viscoelastics especially when the anterior chamber must be maintained the corneal endothelium must be protected and delicate tissues must be manipulated A corneal transplant can be sutured safely into the recipient corneal ring using viscoelastics Even in glaucoma surgery viscoelastics gain importance as they are being used in trabeculectomy or in deep sclerectomy with additional viscocanalostomy But which substance is best for which purpose Just as much as a basic pharmacological knowledge is necessary for a rational use of drugs in depth knowledge of physicochemical properties and objective investigations are prerequisites for a logical selection of viscoelastics from an ever increasing number of available substances H
