Traumatic Experiences of Normal Development Carl H. Shubs, 2020-02-24. Traditionally, trauma has been defined as negatively impacting external events with resulting damage. This book puts forth an entirely different thesis: trauma is universal, occurring under even the best of circumstances and unavoidably sculpting the very building blocks of character structure. In *Traumatic Experiences of Normal Development*, Dr. Carl Shubs de-pathologizes the experience of trauma by presenting a listening perspective which helps recognize the presence and effects of traumatic experiences of normal development. TEND, by using a reconstruction of object relations theory, this outlook redefines trauma as the breach in intrapsychic organization of Self, Affect, and Other (SAO), the three components of object relations units which combine to form intricate and changeable constellations that are no less than the total experience of living in any given moment. Bridging the gap between the trauma and analytic communities, as well as integrating intrapsychic and relational frameworks, the SAO TEND perspective provides a trauma-based band of attunement for attending to all relational encounters, including those occurring in therapy. Though targeted to mental health professionals, this book will help enable therapists and sophisticated lay readers alike to recognize the impact of relational encounters, providing new tools to understand the traumas we have experienced and to minimize the hold they have on us.

A Human's Guide to Machine Intelligence Kartik Hosanagar, 2020-03-10. A Wharton professor and tech entrepreneur examines how

algorithms and artificial intelligence are starting to run every aspect of our lives and how we can shape the way they impact us Through the technology embedded in almost every major tech platform and every web enabled device algorithms and the artificial intelligence that underlies them make a staggering number of everyday decisions for us from what products we buy to where we decide to eat to how we consume our news to whom we date and how we find a job We've even delegated life and death decisions to algorithms decisions once made by doctors pilots and judges In his new book Kartik Hosanagar surveys the brave new world of algorithmic decision making and reveals the potentially dangerous biases they can give rise to as they increasingly run our lives He makes the compelling case that we need to arm ourselves with a better deeper more nuanced understanding of the phenomenon of algorithmic thinking And he gives us a route in pointing out that algorithms often think a lot like their creators that is like you and me Hosanagar draws on his experiences designing algorithms professionally as well as on history computer science and psychology to explore how algorithms work and why they occasionally go rogue what drives our trust in them and the many ramifications of algorithmic decision making He examines episodes like Microsoft's chatbot Tay which was designed to converse on social media like a teenage girl but instead turned sexist and racist the fatal accidents of self driving cars and even our own common and often frustrating experiences on services like Netflix and Amazon A Human's Guide to Machine Intelligence is an entertaining and provocative look at one of the most important developments of our time and a practical user's guide to this first wave of practical artificial intelligence
