Farm Machinery Selection Investment And Management:

Farm Machinery Andrew Landers, 2000 A detailed analysis of one of the major fixed costs on the farm machinery It is designed to help farmers to run their business more efficiently Topics covered include components of a mechanised system equipment required for given land areas purchase of machines and monitoring Operations Management in Agriculture Dionysis Bochtis, Claus Aage Gron Sorensen, Dimitrios Kateris, 2018-11-20 Operations Management in Agriculture bridges the knowledge gap on operations management for agricultural machinery It complements traditional topics cost of using and choosing machinery with advanced engineering approaches recently applied in agricultural machinery management area coverage planning and sequential scheduling The book covers new technologies in bio production systems robotics IoT and environmental compliance by employing a systems engineering perspective with focuses on sub systems including advanced optimization supply chain systems sustainability autonomous vehicles and IT driven decision making It will be a valuable resource for students studying decision making and those working to improve the efficiency effectiveness and sustainability of production through machinery choice Covers agricultural machinery management related courses and a number of other courses within the agricultural engineering discipline Provides core tools for machine operations management including machinery selection and cost of usage Presents current knowledge for agricultural machinery management in a science based format *HIRE SERVICES AS A BUSINESS ENTERPRISE* Food and Agriculture Organization of the United Nations, 2018-07-20 This manual is specifically designed to help train actual and potential farm mechanization service providers in order to increase access to sustainable farm power to raise the productivity of smallholder farmers It focuses on two crucial aspects the provision of farm mechanization services as a viable business opportunity for entrepreneurs and the essential criteria of raising productivity in an environmentally sensitive and responsible way i e that includes conservation agriculture Practical guidance on the essential business development and management skills required to successfully run a mechanization service provision business are presented with a focus on the equipment required to offer services compatible with conservation agriculture The manual will be of particular interest to policymakers intent on achieving sustainable intensification in the agricultural sector It is also a valuable resource for trainers charged with increasing the supply of well trained and well equipped entrepreneurial mechanization service providers through the implementation of training courses tailored to the specific course locations Conservation Agriculture for Africa Amir H Kassam, Saidi Mkomwa, Theodor Friedrich, 2016-12-14 Tillage agriculture has led to widespread soil and ecosystem degradation globally This is especially so in Africa where traditional and modern tillage based agricultural practices have become unsustainable due to severe disturbance and exploitation of natural resources with negative impacts on the environment and rural livelihoods In addition agriculture in Africa today faces major challenges including increased costs of production and energy the effects of climate change and the lack of an effective paradigm for sustainable intensification especially for small and medium size holdings

Africa is facing a serious challenge to food security and as a continent has not advanced towards eradicating hunger. In addition, the population is still growing much faster than on most other continents. This pressure has led to the emergence of no till conservation agriculture as a serious alternative sustainable agriculture paradigm. In Africa, in recent years, conservation agriculture techniques and methods have spread to many countries as greater development, education, and research effort are directed towards its extension and uptake. This book is aimed at agricultural researchers and scientists, educationalists, and agricultural service providers, institutional leaders, and policy makers working in the fields of sustainable agriculture and international development, and also at agroecologists, conservation scientists, and those working on ecosystem services.

Farm Power and Machinery Management Donnell Hunt, 2008-03-27

Mechanization is an integral part of all North American farms. While farm machinery has improved the efficiency of farming dramatically over the years, the costs of owning and operating machinery can be excessive. Proper management and optimization of mechanized equipment are essential for reducing costs and maximizing profits. *Farm Power and Machinery Management* analyzes the factors that comprise machinery management, explains the functions of the various machines and mechanisms as they affect economic operation, and offers contemporary approaches and procedures for making management decisions. The authoritative coverage of management principles and the machinery operating details make this text an outstanding choice for courses in agricultural education, agricultural mechanization, agricultural business, and agricultural engineering. An understanding of agricultural practices, college algebra, and trigonometry are adequate preparation for using this text. Abundant figures, photographs, and charts, along with laboratory exercises, that amplify and fix the concepts of farm machinery management in the reader's mind, enhance the text's effectiveness for students as well as for farmers, farm operators, and farm managers.

The Development of an Integrated Planning and Decision Support System (IPDSS) for Land Consolidation

Demetris Demetriou, 2013-11-01

This book provides an extensive review of three interrelated issues: land fragmentation, land consolidation, and land reallocation, and it presents in detail the theoretical background, design, development, and application of a prototype integrated planning and decision support system for land consolidation. The system integrates geographic information systems (GIS) and artificial intelligence techniques, including expert systems (ES) and genetic algorithms (GAs) with multi-criteria decision methods (MCDM), both multi-attribute MADM and multi-objective MODM. The system is based on four modules for measuring land fragmentation, automatically generating alternative land redistribution plans, evaluating those plans, and automatically designing the land partitioning plan. The presented research provides a new scientific framework for land consolidation planning, both in terms of theory and practice, by presenting new findings and by developing better tools and methods embedded in an integrated GIS environment. It also makes a valuable contribution to the fields of GIS and spatial planning as it provides new methods and ideas that could be applied to improve the former for the benefit of the latter in the context of planning support systems. From the 1960s, ambitious research activities set out to observe regarding IT

support of the complex and time consuming redistribution processes within land consolidation without any practically relevant results until now This scientific work is likely to close that gap This distinguished publication is highly recommended to land consolidation planning experts researchers and academics alike Prof Dr Ing Joachim Thomas Münster Germany Planning support systems take new scientific tools based on GIS optimisation and simulation and use these to inform the process of plan making and policy This book is one of the first to show how this can be consistently done and it is a triumph of demonstrating how such systems can be made operational Essential reading for planners analysts and GI scientists Prof Michael Batty University College London **Agricultural Machinery Management** Charles L.
