Water Resources Development Edward Kuiper, 2013-12-14 **Water Resources Planning and Management** R. Quentin Grafton, Karen Hussey, 2011-02-17 Water is an increasingly critical issue at the forefront of global policy change management and planning There are growing concerns about water as a renewable resource its availability for a wide range of users aquatic ecosystem health and global issues relating to climate change water security water trading and water ethics This handbook provides the most comprehensive reference ever published on water resource issues It brings together multiple disciplines to understand and help resolve problems of water quality and scarcity from a global perspective Its case studies and foundation chapters will be greatly valued by students researchers and professionals involved in water resources hydrology governance and public policy law economics geography and environmental studies Economics of water resources planning Leonard Douglas James, 1970 Economics of Water Resources: From Regulation to Privatization Nicolas Spulber, Asghar Sabbaghi, 2012-12-06 The appearance of this Second Edition has been encouraged by the favorable reception of the first This has offered us the opportunity to update the materials and to expand the exposition of four central theses concerning 1 the integration of water quantity quality issues and the treatment of water as a multi product commodity with the market playing a major role in determining water quality discriminant pricing 2 the drawbacks of public controls regulation and enforcement and the need to expand privatization of water supply and of water and wastewater treatment facilities to ensure their appropriate development and modernization through increased reliance on private capital 3 the unification and centralization of water management on the river basin level in order to handle effectively the expanding pressures for water availability for the elimination of waterborne disease for extensive and effective pollution abatement as

Current Issues in the Economics of Water Resource Management P. Pashardes, T.M. Swanson, A. Xepapadeas, 2013-04-17 The marginal price elasticities estimated by Martinez Espineira conforms to expectation The price specification that accounts for the changing proportion of water users in each block yields a higher elasticity 0.47 compared to the specification ignoring this feature of the data However this difference is not found to be statistically significant a result attributed to the low power of the test small sample size limiting the accuracy of estimates In conclusion the paper provides a theoretically correct price specification for demand functions under block pricing and aggregate data The empirical findings in the paper however are not conclusive and further empirical work using more data and alternative nonlinear demand functions is needed to show the practical implications of the arguments put forward by the Martinez Espineira's paper Static empirical consumer demand functions estimated with aggregate data are well known to suffer from serial correlation and other statistical problems associated with misspecified dynamics These dynamics arise because consumers do not react immediately to a change in prices due to their largely predetermined lifestyle In the case of demand for water for example current purchases can be largely predetermined due to commitments arising from past purchases such as swimming pools bathtubs dishwashing machines etc Muellbauer and Pashardes 1992 show that the autoregressive nature of consumer demand data can be captured in a theoretically consistent manner by incorporating intertemporal aspects of consumer behaviour in the model through habit formation and durability Water Resources Research Catalog, 1966

Economics of Water Resources Nicolas Spulber, Asghar Sabbaghi, 2014-01-15 This book develops a general economic model which integrates the quantity and quality issues of water resource management and provides along with a detailed criticism of the policy instruments now in use alternative proposals concerning the efficient allocation and distribution of water In particular the authors treat water as a multi product commodity where the market plays a major role in determining water quality discriminant pricing and its value to the user The book examines the process of moving from administrative allocation and regulation to privatization of the water industry as the key element in promoting effective competition and in providing economic incentives for greater efficiency The book is divided into four major parts The first presents the analytical framework within which the main issues in the management of water resources are examined The second part focuses on water quality modeling and the analysis of quantity quality controls and water distribution Part three examines instruments of public policy and the regulations enacted for water resources management The fourth part presents the overall conclusions The book is designed for all students of environmental problems as well as for professionals involved in water resources allocation and in pollution abatement programs at both planning and management levels The book can be used in
