Ecosystems and Human Well-being Millennium Ecosystem Assessment, 2005 Millennium Ecosystem Assessment poverty **Bridging Scales and Knowledge Systems** Walter World Resources Institute, Walter Millennium Ecosystem Assessment, 2013-04-09 Bridging the gap between local knowledge and western science is essential to understanding the world s ecosystems and the ways in which humans interact with and shape those ecosystems This book brings together a group of world class scientists in an unprecedented effort to build a formal framework for linking local and indigenous knowledge with the global scientific enterprise Contributors explore the challenges costs and benefits of bridging scales and knowledge systems in assessment processes and in resource management Case studies look at a variety of efforts to bridge scales providing important lessons concerning what has worked what has not and the costs and benefits associated with

those efforts Drawing on the groundbreaking work of the Millennium Ecosystem Assessment Bridging Scales and Knowledge Systems will be indispensable for future efforts to conduct ecosystem assessments around the world

Taking Stock of Nature Anna Lawrence,2010-02-18 In a world of increasing demands for biodiversity information participatory biodiversity assessment and monitoring is becoming more significant Whilst other books have focused on methods or links to conservation or development this book is written particularly for policy makers and planners Introductory chapters analyze the challenges of the approach the global legislation context and the significance of the Millennium Ecosystem Assessment Specially commissioned case studies provide evidence from 17 countries by 50 authors with expertise in both biological and social sciences Ranging from community conservation projects in developing countries to amateur birdwatching in the UK they describe the context objectives stakeholders and processes and reflect on the success of outcomes Rather than advocating any particular approach the book takes a constructively critical look at the motives experiences and outcomes of such approaches with cross cutting lessons to inform planning and interpretation of future participatory projects and their contribution to policy objectives

Restoring Natural Capital James Aronson,Suzanne J. Milton,James N. Blignaut,2012-09-26 How can environmental degradation be stopped How can it be

reversed And how can the damage already done be repaired The authors of this volume argue that a two pronged approach is needed reducing demand for ecosystem goods and services and better management of them coupled with an increase in supply through environmental restoration Restoring Natural Capital brings together economists and ecologists theoreticians practitioners policy makers and scientists from the developed and developing worlds to consider the costs and benefits of repairing ecosystem goods and services in natural and socioecological systems It examines the business and practice of restoring natural capital and seeks to establish common ground between economists and ecologists with respect to the restoration of degraded ecosystems and landscapes and the still broader task of restoring natural capital The book focuses on developing strategies that can achieve the best outcomes in the shortest amount of time as it considers conceptual and theoretical issues from both an economic and ecological perspective examines specific strategies to foster the restoration of natural capital and offers a synthesis and a vision of the way forward Nineteen case studies from around the world illustrate challenges and achievements in setting targets refining approaches to finding and implementing restoration projects and using restoration of natural capital as an economic opportunity Throughout contributors make the case that the restoration of natural capital requires close collaboration among scientists from across disciplines as well as local people and when successfully executed represents a practical realistic and essential tool for achieving lasting sustainable development

Discrete-Event Simulation and System Dynamics for Management Decision Making Sally Brailsford, Leonid Churilov, Brian Dangerfield, 2014-03-31 In recent years there has been a growing debate particularly in the UK and Europe over the merits of using discrete event simulation DES and system dynamics SD there are now instances where both methodologies were employed on the same problem This book details each method comparing each in terms of both theory and their application to various problem situations It also provides a seamless treatment of various topics theory philosophy detailed mechanics practical implementation providing a systematic treatment of the methodologies of DES and SD which previously have been treated separately

Coasts for People Fikret Berkes, 2015-02-11 Issues of sustainability and increased competition over coastal resources are changing practices of resource management Societal concerns about environmental degradation and loss of coastal resources have steadily increased while other issues like food security biodiversity and climate change have emerged A full set of social ecological and economic objectives to address these issues are recognized but there is no agreement on how to implement them This interdisciplinary and big picture book through a series of vivid case studies from environments throughout the world suggests how to achieve these new resource management principles in practical accessible ways

The Routledge Handbook of Indigenous Environmental Knowledge Thomas F. Thornton, Shonil A.
