

Economic Evaluation of Public Programs¹

Martin NEKOLA – František OCHRANA*

Abstract

The present study deals with theoretical and practical problems related to program evaluation. Based on contrasting various public program evaluation approaches it analyzes the virtues and setbacks of economic evaluation and offers indigenous criteria for comprehensive assessment of public programs. At the end, a mathematical model to optimize the public program portfolio related to discrete costs is proposed.

Introduction

Evaluation of public policy outcomes and public programs is an interesting issue for researchers and hands on experts. “Evaluation” could be approached from various angles. However, the present study centers above all on economic evaluation that has been the focus of sterling efforts by scientists (see McDavid and Hawton, 2006; Harberger and Jenkins, 2002; Wholey et al., 1994) as well as authors developing general theoretical approaches to suit the specific features of the Central European region (Wright and Nemec, 2002). Other researchers center on particular economic issues, such as monitoring economy, efficiency and purpose in allocating resources (Šumpíková et al., 2004). Still others dwell on the issues of spending program control (Benčo et al., 2001) or institutional functioning of selected spending programs (Beblavý and Beblavá, 2006), or, in selected

Economic Evaluation Of Public Programs:

Economic Evaluation of Public Programs James S. Catterall, 1985 **The Economic Analysis of Public Policy** William K. Bellinger, 2015-12-22 A critical analysis of public policy decisions requires a far greater depth of knowledge than can be received from news reports and political speeches Issues such as how best to reduce traffic congestion reduce acid rain improve airline safety or develop a parcel of land are better understood by organizing measuring and weighing the effects of alternative policies The *Economic Analysis of Public Policy* now in its second edition is the ideal introduction to benefit cost analysis the economics of efficiency risk analysis and present value and is suitable for those with only a modest background in mathematics and economics This brand new edition of the book has been rigorously updated throughout in terms of examples and data references issues covered and layout and pedagogical features Key concepts are reinforced through multiple problems and discussion questions within each chapter This latest edition contains extra material on loss aversion global warming technology and US health care reform as well as a wider range of international examples Extra tables have been included in order to clarify more complicated issues Instructors will also benefit from the new companion website which will offer power point presentations answers to end of chapter questions and a test bank This textbook encourages its readers to understand and apply key concepts whilst also learning to appreciate policy analysis as part of an interdisciplinary analytical and political process that can lead to better government policy decisions It is an ideal teaching tool for undergraduate and postgraduate students engaged in Public Administration Public Economics and Public Policy *The Economics of Evaluation in Public Programs* Albert N. Link, John T. Scott, 2011 This research collection illustrates the wide range of methodologies and methods available for the evaluation of public programs All these methods address the benefits of the programs and most compare the benefits to costs but the types of benefits and their measures vary greatly across the studies and across the different types of public programs The key articles presented here explore these different approaches and offer many examples of actual evaluations of public programs across different public policy settings Professor Link and Professor Scott have provided an authoritative original introduction which elucidates this diversity of approaches and settings and challenges scholars to contemplate an evaluation in terms of its theoretical foundation *The Economic Analysis of Public Policy* Mary Jean Bowman, George Leland Bach, 1949 *Applying Cost Analysis to Public Health Programs*, 200? *Economics of Evaluation in Public Programs* , **Handbook of Economic Evaluation of HIV Prevention Programs** David R. Holtgrave, 2013-06-29 If resources for HIV prevention efforts were truly unlimited then this book would be entirely unnecessary In a world with limitless support for HIV prevention activities one would simply implement all effective or potentially effective programs without regard to expense We would do everything useful to prevent the further spread of the virus that has already claimed hundreds of thousands of lives in the United States and millions of lives worldwide Unfortunately funding for HIV prevention programs is limited Even though the amount of available funding may

seem quite large especially in the United States it is still fixed and not sufficient to meet all needs for such programs This was very well illustrated in the summer of 1997 when over 500 community based organizations applied for a combined total of 18 million of HIV prevention funding from the U S Centers for Disease Control and Prevention CDC Less than one fifth of these organizations received support via this funding mechanism Hence although 18 million may seem like a large amount of money at first blush it is not enough to meet all of the prevention needs that could be addressed by these community based organizations

Introduction to Economic Evaluation in Oral Health Care has an applied orientation that emphasizes practical solutions to managing existing problems and situations in oral health care As such the book is essential reading for oral health professionals including dentists oral health therapists and dental hygienists as well as students in the oral health professions The text is also an appropriate and useful resource for other health practitioners and managers who are interested in enhancing their practical understanding of economic evaluation including health economists and other health professionals and decision makers

Public Program Evaluation Laura Langbein, 2014-12-18 This readable

and comprehensive text is designed to equip students and practitioners with the statistical skills needed to meet government standards regarding public program evaluation. Even those with little statistical training will find the explanations clear with many illustrative examples, case studies and applications. Far more than a cookbook of statistical techniques, the book begins with chapters on the overall context for successful program evaluations and carefully explains statistical methods and threats to internal and statistical validity that correspond to each evaluation design. Laura Langbein then presents a variety of methods for program analysis and advises readers on how to select the mix of methods most appropriate for the issues they deal with, always balancing methodology with the need for generality, the size of the evaluator's budget, the availability of data and the need for quick results.

Theory and Methods of Economic Evaluation of Health Care Magnus Johannesson, 2013-03-09. Most economic evaluations of health care programmes at the moment are cost effectiveness and cost utility analyses. The problem with these methods is that their theoretical foundations are unclear. This has led to confusion about how to define the costs and health effects and how to interpret the results of these studies. In the environmental and traffic safety fields it is instead common to carry out traditional cost benefit analyses of health improving programmes. This striking difference in how health programmes are assessed in different fields was the original motivation for writing this book. The aim of the book is to try and provide a coherent framework within cost benefit analysis and welfare economics for the different methods of economic evaluation in the health care field. The book is written in an easily accessible manner and several examples of applications of the different methods are provided. It is my hope that it will be useful both for teaching purposes and as a guide for practitioners in the field. Glenn C. Blomquist, John D. Graham, Rich O. Connor and four anonymous referees provided helpful comments on previous versions of the manuscript. I would also like to express my gratitude to the following persons for helping me to prepare the manuscript: Carl Magnus Berglund, Carin Blanksvard, Ann Brown and Ziad Obeid.
