The Civic Culture of Local Economic Development Laura A. Reese, Raymond A. The Measurement of Productive Efficiency Harold O. Fried, Shelton S. Schmidt, C. A. Knox Lovell, 1993-04-22 This work focuses on measuring and explaining producer performance The authors view performance as a function of the state of technology and economic efficiency with the former defining a frontier relation between inputs and outputs the former incorporating waste and misallocation relative to this frontier They show that insights can be gained by allowing for the possibility of a divergence between the economic objective and actual performance and by associating this inefficiency with causal variables subject to managerial or policy influence Derived from a series of lectures held on techniques and applications of the three approaches to the construction of production frontiers and measure of efficiency this work will be an essential reference to scholars of a variety of disciplines who are involved with quantitative methods or policy

Structuralist Knowledge Representation, 2022-05-16 **The Limits of Inference without Theory** Kenneth I. Wolpin, 2013-04-26 The role of theory in ex ante policy evaluations and the limits that eschewing theory places on inference In this rigorous and well crafted work Kenneth Wolpin examines the role of theory in inferential empirical work in economics and the social sciences in general that is any research that uses raw data to go beyond the mere statement of fact or the tabulation of statistics He considers in particular the limits that eschewing the use of theory places on inference Wolpin finds that the absence of theory in inferential work that addresses microeconomic issues is pervasive That theory is unnecessary for inference is exemplified by the expression let the data speak for themselves This approach is often called reduced form A more nuanced view is based on the use of experiments or quasi experiments to draw inferences Atheoretical approaches stand in contrast to what is known as the structuralist approach which requires that a researcher specify an explicit model of economic behavior that is a theory Wolpin offers a rigorous examination of both structuralist and nonstructuralist approaches He first considers ex ante policy evaluation highlighting the role of theory in the implementation of parametric and nonparametric estimation strategies He illustrates these strategies with two examples a wage tax and a school attendance subsidy and summarizes the results from applications He then presents a number of examples that illustrate the limits of

inference without theory the effect of unemployment benefits on unemployment duration the effect of public welfare on women's labor market and demographic outcomes the effect of school attainment on earnings and a famous field experiment in education dealing with class size Placing each example within the context of the broader literature he contrasts them to recent work that relies on theory for inference [Error in Economics](#) Julian Reiss, 2016-02-04 What is the correct concept behind measures of inflation Does money cause business activity or is it the other way around Shall we stimulate growth by raising aggregate demand or rather by lowering taxes and thereby providing incentives to produce Policy relevant questions such as these are of immediate and obvious importance to the welfare of societies The standard approach in dealing with them is to build a model based on economic theory answer the question for the model world and then apply the results to economic phenomena outside Data come in if at all only in testing a limited number of the model's consequences Despite some critical voices economic methodology too has by and large subscribed to a theory first approach to applied economics Error in Economics systematically develops an alternative to the theory based orthodoxy It places the methodical study of evidence at the centre of the scientific enterprise and thus provides a foundation for a methodology of evidence based economics But the book does not stop at the truism that claims should be based on the best available evidence Rather detailed studies in the areas of measurement causal inference and policy analysis show what it means for a claim to be evidence based in the context of a concrete case The examples discussed concern topics as diverse as consumer price indices radio spectrum auctions the transmission mechanism natural experiments on minimum wages and the evaluation of counterfactuals for policy Error in Economics is essential reading for economic methodologists philosophers of science and anyone interested in how claims about socio economic matters are validated [Agricultural Economics Research](#), 1986
