It augments current contributions from the fields of public choice law and economics and the burgeoning field of what used to be called the New Institutional Economics to describe, explain, and interpret how these new developments have been applied to better understand the economics of natural resources and the environment. This textbook takes a multi-disciplinary approach which is essential for understanding complex environmental problems and examines the issue from not only an economic perspective but also taking into account law, politics, and institutions. NEW This edition of the text features a new organization. The first section is an overview of techniques; the second focuses on static models of natural resource use; and the third examines dynamic models of natural resource use. NEW Revised and updated cases use real-world examples and show how they are linked to natural resource modeling. NEW Text pedagogy has been improved overall, including a much more extensive use of graphs. Only current book solely on natural resources without environmental econ for all of North America.
