Economics And The Crisis Of Ecology:

Economics and the Crisis of Ecology Narindar Singh, 1976 **Parallax of Growth** Ole Bjerg, 2016-03-11 Parallax of Growth explores the ideas of economy and ecology and the factors that have put them on a collision course Bjerg argues that our current mode of economic organization is characterized by an inherent debt drive whereby the creation of money through the issuance of commercial bank credit has locked our economy into a vicious circle of forced growth and increasing debt Parallax of Growth is not a catalogue of solutions to the ecological or the economic crisis The book aims to shift the inquiry from what shall we do to why have we not already done it In order to address the challenges of our contemporary times of crisis we need to understand how the idea of growth is deeply ingrained in the ideology as well as the organization of our society The book aims to open the space for philosophical thinking about this important issue **Ecological Political**

Economy and the Socio-Ecological Crisis Martin P. A. Craig, 2016-11-16 Critically synthesising a range of disparate literatures and debates this book asks what is at stake in mounting a decisive response to the socio ecological crisis a crisis of humanity's relationship with the rest of nature that places social life as we know it in jeopardy Martin Craig proposes that political economists within and beyond the field of political ecology make an indispensable contribution to the diagnosis of this crisis and the formulation of prescriptions for its resolution In a wide ranging yet concise exposition he assesses the fraught relationship between capitalist societies and the biosphere of which they are a part and urges a renewed emphasis on political economic structure and strategy when considering responses to the crisis The result is a proposal for a critical yet inclusive research enterprise ecological political economy within which a wide variety of researchers can readily participate

Resolving the Climate Change Crisis Philip Lawn, 2016-02-29 This book explains why the climate change crisis is a symptom of a much larger underlying problem namely humankind's predilection with continuous GDP growth Given this starting point the world's high income nations must begin the transition to a qualitatively improving steady state economy and low income nations must follow suit at some stage over the next 20-40 years Unless they do a well designed emissions protocol will be as useless as the paper it is written on Adopting an ecological economic approach this book sets out why we must abandon the goal of continuous growth how we can do so in a way that improves human well being what constitutes a safe atmospheric concentration of greenhouse gases and what type of emissions protocol and emissions trading framework is likely to achieve a desirable climate change outcome Failure of the world's leaders to achieve these goals will not only put future human well being at risk it will threaten freedom in the liberal democratic tradition and international peace **The**

Ecological Crisis and the Logic of Capital Xueming Chen, 2017-09-11 The worsening environmental crisis has become a serious threat to mankind The search for a solution to this crisis must begin by understanding its causes Taking an eco socialist perspective The Ecological Crisis and the Logic of Capital explores the logic of capitalism as a fundamental cause of today's environmental crisis in particular the thirst for profit and the capitalist mode of production By demonstrating the

inherent antagonism between capital and ecology this book argues that proposals to resolve the crisis within the capitalist system are utopian that proposed remedies relying on scientific progress alternative energies low carbon technologies or the introduction of ecological ethics and new attitudes toward Nature into market mechanisms are doomed to failure without a radical overhaul of the principles that govern capitalism Ecology Against Capitalism John Bellamy Foster, 2002-02-01 In recent years John Bellamy Foster has emerged as a leading theorist of the Marxist perspective on ecology His seminal book *Marx's Ecology* Monthly Review Press 2000 discusses the place of ecological issues within the intellectual history of Marxism and on the philosophical foundations of a Marxist ecology and has become a major point of reference in ecological debates This historical and philosophical focus is now supplemented by more directly political engagement in his new book *Ecology against Capitalism* In a broad ranging treatment of contemporary ecological politics Foster deals with such issues as pollution sustainable development technological responses to environmental crisis population growth soil fertility the preservation of ancient forests and the new economy of the Internet age Foster's introduction sets out the unifying themes of these essays enabling the reader to draw from them a consolidated approach to a rapidly expanding field of debate which is of critical importance in our times Within these debates on the politics of ecology Foster's work develops an important and distinctive perspective Where many of these debates assume a basic divergence of red and green issues and are concerned with the exact terms of a trade off between them Foster argues that Marxism properly understood already provides the framework within which ecological questions are best approached This perspective is advanced here in accessible and concrete form taking account of the major positions in contemporary ecological debate **Economics and Ecology** Edward B. Barbier, 2012-12-06 In the Summer of 1991 Bob Carling who was then Life Sciences Editor of Chapman Hall approached me over the possibility of producing an edited volume of works on economics and ecology As we discussed the matter further what became clear is that there is a growing literature on the frontiers of both disciplines that has involved economists borrowing from ecology and ecologists borrowing from economics We decided that this volume should try to provide a small cross section of that literature I was very much interested in editing this volume for several reasons First one of my principal interests in economics has been how the economic analysis of natural resource and environmental problems can benefit from the concepts and lessons learned from other disciplines in particular ecology I was grateful at having the opportunity to pull together a selection of readings that illustrate how the integration of the two disciplines can lead to fruitful analysis Second I was also aware that as Director of the London Environmental Economics Centre and as a Senior Researcher at the International Institute of Environment and Development I was fortunate to have worked with or to have known a number of economists and ecologists whose work would be ideal for this volume I was delighted that so many of my friends and colleagues were as enthusiastic about this project as I and agreed to participate **The economic crisis and its consequences for the environment and environmental policy** Adriaan Perreels, 2010 Ecology and Socialism Chris

Williams,2010-08-17 Around the world consciousness of the threat to our environment is growing The majority of solutions on offer from using efficient light bulbs to biking to work focus on individual lifestyle changes yet the scale of the crisis requires far deeper adjustments Ecology and Socialism argues that time still remains to save humanity and the planet but only by building social movements for environmental justice that can demand qualitative changes in our economy workplaces and infrastructure Chris Williams is a longtime environmental activist professor of physics and chemistry at Pace University and chair of the science department at Packer Collegiate Institute He lives in New York City *Crisis System* Petter Naess,Leigh

Price,2016-06-17 This book throws light onto the nature and causes of three different but strongly interconnected crises in contemporary societies worldwide an economic crisis an ecological crisis and a normative moral and political crisis These crises are reflected in the profoundly inequitable distribution of wealth resources and life opportunities around the world If we follow the causal roots of these crises we are led back to an inherent dynamic in the capitalist economic system itself discursively expressed as neoclassical mainstream economics For instance by conflating human needs with market demand mainstream economics disregards the needs of those who do not have sufficient purchasing power as well as any needs that cannot be quantified or monetised in some way Mainstream economics also ignores the notion of natural limits Furthermore it seems that everything that is quantifiable is potentially for sale and this results in the substitution of nature indigenous cultural traditions and various life forms with commodities and human capital The latter is defined as the skills instrumental for continual economic growth Besides critiquing the academic discipline of economics this book also points to a number of dysfunctional and crisis prone structures and practices of substantive economic life It will be of interest to students and scholars working in philosophy economics and environmental studies **Green Politics, Green Economics** Palaeologu

Athena Palaeologu,2020-07-16 Given the world wide ecological crisis to what extent do the current economic systems of production and consumption need to change To make substantial changes to the dominant economic system as the author proposes area new politics required What are the relations between economic and political changes M Athena Palaeologu s lucid and engaging analysis offers concrete proposals for moving beyond our current social and environmental impasse In market driven economies around the world ecological crises are creating major problems of supply and distribution The inability of governments to manage these environmental problems both domestically and internationally has led to widespread contradictions between public rhetoric and political practice A growing number of contemporary publications respond to these crises by advocating a successful marriage of the corporate marketplace with the goals of environmentalism in a marketing landscape where large and small corporations are tripping over each other to present their e greene credentials M Athena Palaeologu s timely work *Green Politics Green Economics* examines these apologetic responses to broach an uncomfortable but fundamental question is long term and sustainable development really possible under market capitalism Palaeologu develops two alternative approaches to these environmental challenges i ae green politicse that places

major importance on achieving ecological goals through grassroots participatory citizen involvement drawing heavily on values shared with feminist and social movements and ii ae green economicse that address the dynamic and spatial interdependence between human economies and the natural ecosystems which sustain them The focus of both of these approaches is thee scalee conundrum how are we to implement a green economics capable of realising development within the ecological constraints of our planet s biosphere The Barcelona School of Ecological Economics and Political Ecology Sergio Villamayor-Tomas,Roldan Muradian,2023-02-28 In this open access book ecological economics and political ecology traditions converge into a single academic school The book constitutes a common ground where multiple and critical voices are expressed covering a broad scope of urgent matters at the crossroad between society economy and the natural environment The manuscripts composing this compendium offer appealing material for both experienced and younger researchers interested in interdisciplinary exchanges in the field of the social environmental sciences It combines historical accounts with recent theoretical and empirical developments revolving around the interaction between three foundational notions of the Barcelona School social metabolism environmental justice and self reflective science **Global Political**

Ecology Adam Swift,1993 This book examines the new framework of ideas since 1989 which will inform our understanding on how development in the old Third World should be understood The Routledge Handbook of Heterodox Economics Tae-Hee Jo,Lynne Chester,Carlo D'Ippoliti,2017-07-28 The Routledge Handbook of Heterodox Economics presents a comprehensive overview of the latest work on economic theory and policy from a pluralistic heterodox perspective Contributions throughout the Handbook explore different theoretical perspectives including Marxian radical political economics Post Keynesian Sraffian economics institutionalist evolutionary economics feminist economics social economics R regulation theory the Social Structure of Accumulation approach and ecological economics They explain the structural properties and dynamics of capitalism as well as propose economic and social policies for the benefit of the majority of the population This book aims firstly to provide realistic and coherent theoretical frameworks to understand the capitalist economy in a constructive and forward looking manner Secondly it delineates the future directions as well as the current state of heterodox economics and then provides both heat and light on controversial issues drawing out the commonalities and differences among different heterodox economic approaches The volume also envisions transformative economic and social policies for the majority of the population and explains why economics is and should be treated as a social science This Handbook will be of compelling interest to those including students who wish to learn about alternative economic theories and policies that are rarely found in conventional economics textbooks or discussed in the mainstream media and to critical economists and other social scientists who are concerned with analyzing pressing socio economic issues Green Economics Robin Hahnel,2014-12-18 This book s pluralistic non dogmatic and committed investigation of the values of ecological sustainability economic justice and human dignity provides balanced analysis of environmental problems and their

potential solutions Ecological Economics, Second Edition Herman E. Daly, Joshua Farley, 2011-01-26 In its first edition this book helped to define the emerging field of ecological economics This new edition surveys the field today It incorporates all of the latest research findings and grounds economic inquiry in a more robust understanding of human needs and behavior Humans and ecological systems it argues are inextricably bound together in complex and long misunderstood ways According to ecological economists conventional economics does not reflect adequately the value of essential factors like clean air and water species diversity and social and generational equity By excluding biophysical and social systems from their analyses many conventional economists have overlooked problems of the increasing scale of human impacts and the inequitable distribution of resources This introductory level textbook is designed specifically to address this significant flaw in economic thought The book describes a relatively new transdiscipline that incorporates insights from the biological physical and social sciences It provides students with a foundation in traditional neoclassical economic thought but places that foundation within an interdisciplinary framework that embraces the linkages among economic growth environmental degradation and social inequity In doing so it presents a revolutionary way of viewing the world The second edition of Ecological Economics provides a clear readable and easy to understand overview of a field of study that continues to grow in importance It remains the only stand alone textbook that offers a complete explanation of theory and practice in the discipline **Thinking Through the Environment** Mark J. Smith, 2005-09-30 This reader brings together material from ecological thought environmental policy environmental philosophy social and political thought historical sociology and cultural studies The extracts tell the story of the way the natural environment has been understood in the modern world and how this has recently been questioned as contemporary societies are seen as characterised by uncertainty and complexity The literature guides the reader through the conventional grounds for thinking about rights and obligations in relation to future generations non human animals and the biotic communities bringing each into question This then leads into a critical examination of social and political theories and their capacity for drawing on ecological thought Each of the seven sections of readings is introduced by the editor who locates the set of readings within the specific themes and issues at the heart of each section This broad reaching and thought provoking set of readings stresses the diversity of response to environmental problems both within and between anthropocentric and ecocentric approaches and will encourage the reader to examine how they are manifested in the areas of environmental ethics policy analysis and social and political theory

Elgar Encyclopedia of Ecological Economics Emilio Padilla Rosa, Jesús Ramos-Martín, 2023-09-06 With diverse contributions from over 100 authors around the globe this comprehensive Encyclopedia summarises the developments of ecological economics from the fundamental contributions to the more recent methodological debates in the field It provides an expansive list of topics including sustainable development the limits to growth agroecology implications of thermodynamic laws for economics integrated ecologic economic modelling valuation of natural resources and services and renewable and

non renewable resources management This title contains one or more Open Access chapters

Ecology and the World-System Walter L. Goldfrank, David Goodman, Andrew Szasz, 1999-06-30 Integrating environmental and world systems analyses in chapters ranging from the ancient to the contemporary from the global to the local from West to East and from North to South this book is the first collection to analyze environmental issues from the world systems perspective The introduction provides Immanuel Wallerstein s fullest explication of the role of ecological constraints in the world system Early chapters diagnose the increasing environmental threats to global sustainability and suggest ways to arrive at an integrated theoretical understanding of those threats The work then shows the historical and geographical range necessary to do justice to ecological considerations in chapters considering ancient civilizations capitalism the circumpolar North the dam builders of Asia and the polluters of East Central Europe The final chapters analyze the successes and limits of environmental movements in the United States South Africa and South Korea

The Limits of the Green Economy Anneleen Kenis, Matthias Lievens, 2015-03-24 Projecting win win situations new economic opportunities green growth and innovative partnerships the green economy discourse has quickly gained centre stage in international environmental governance and policymaking Its underlying message is attractive and optimistic if the market can become the tool for tackling climate change and other major ecological crises the fight against these crises can also be the royal road to solving the problems of the market But how green is the green economy And how social or democratic can it be This book examines how the emergence of this new discourse has fundamentally modified the terms of the environmental debate Interpreting the rise of green economy discourse as an attempt to re invent capitalism it unravels the different dimensions of the green economy and its limits from pricing carbon to emissions trading from sustainable consumption to technological innovation The book uses the innovative concept of post politics to provide a critical perspective on the way green economy discourse represents nature and society and their interaction and forecloses the imagination of alternative socio ecological possibilities As a way of repoliticising the debate the book advocates the construction of new political faultlines based on the demands for climate justice and democratic commons This book will be of interest to students and scholars of environmental politics political ecology human geography human ecology political theory philosophy and political economy Includes a foreword written by Erik Swyngedouw Professor of Geography Manchester University
