Economics And Medical Research:

Measuring the Gains from Medical Research Kevin M. Murphy, Robert H. Topel, 2010-04-15 In 1998 health expenditures in the United States accounted for 12.9% of national income the highest share of income devoted to health in the developed world The United States also spends more on medical research than any other country in 2000 the federal government dedicated 18.4 billion to it compared with only 3.7 billion for the entire European Union In this book leading health economists ask whether we are getting our money's worth From an economic perspective they find the answer is a resounding yes in fact considering the extraordinary value of improvements to health we may even be spending too little on medical research The evidence these papers present and the conclusions they reach are both surprising and convincing that growth in longevity since 1950 has been as valuable as growth in all other forms of consumption combined that medical advances producing 10% reductions in mortality from cancer and heart disease alone would add roughly 10 trillion a year's GDP to the national wealth or that the average new drug approved by the FDA yields benefits worth many times its cost of development The papers in this book are packed with these and many other surprising revelations their sophisticated analysis persuasively demonstrating the massive economic benefits we can gain from investments in medical research For anyone concerned about the cost and the value of such research from policy makers to health care professionals and economists this will be a landmark book

Demissie Alemayehu, Joseph C. Cappelleri, Birol Emir, Kelly H. Zou, 2017-11-22 With ever rising healthcare costs evidence generation through Health Economics and Outcomes Research (HEOR) plays an increasingly important role in decision making about the allocation of resources Accordingly it is now customary for health technology assessment and reimbursement agencies to request for HEOR evidence in addition to data from clinical trials to inform decisions about patient access to new treatment options While there is a great deal of literature on HEOR there is a need for a volume that presents a coherent and unified review of the major issues that arise in application especially from a statistical perspective Statistical Topics in Health Economics and Outcomes Research fulfills that need by presenting an overview of the key analytical issues and best practice Special attention is paid to key assumptions and other salient features of statistical methods customarily used in the area and appropriate and relatively comprehensive references are made to emerging trends The content of the book is purposefully designed to be accessible to readers with basic quantitative backgrounds while providing an in depth coverage of relatively complex statistical issues The book will make a very useful reference for researchers in the pharmaceutical industry academia and research institutions involved with HEOR studies The targeted readers may include statisticians data scientists epidemiologists outcomes researchers health economists and healthcare policy and decision makers

Staginnus, 2016-10-14 The pharmaceutical industry faces a well documented perfect storm on the one hand the patent cliff the lack of new blockbusters and on the other economic pressure on pricing from markets with growing expectations and shrinking budgets In the face of such pressure traditional health economics models no longer seem appropriate and yet what do we have to replace them The growing focus on value and cost effectiveness are evidence of new emerging thinking

although even here with the shift from medicine as cure to medicine as palliative as a treatment for chronic illness and with the growing emphasis on preventative approaches the landscape is complex and challenging The Future of Health Economics offers a window into some of the most influential emerging issues in pharmacoeconomics issues such as risk sharing and alternative pricing models or the potential impact of radical new approaches such as personalized medicine as well as exploring the changing role of government and regulators Ulf Staginnus and Olivier Ethgen themselves two of the most well regarded practitioners in this field have brought together some leading edge thinkers from industry and academia around the world to provide the industry policy makers regulators health practitioners and academics with the raw material for their future scenarios
