Abstract: Based on the development history of environmental regulation in China and the corresponding economic situation, this paper discusses whether environmental regulation policies in northeast, southwest and central China are conducive to local economic development. The purpose of this paper is to derive appropriate environmental regulatory policies for regions with different economic conditions. The restoration of ecology and the goal of green production in Northeast China have prompted strict environmental protection policies. However, considering the relatively backward level of local economic development, environmental regulation policies should be relaxed appropriately to give way to economic development. However, Southwest China has a serious ecological destruction problem. The implementation of environmental policies can help Southwest China achieve technological innovation, scientific and technological development and economic growth. Therefore, relatively strict environmental regulation policies should be adopted. Central China has a relatively high level of economic development, but there are also problems such as low resource utilization rate. Therefore, strict environmental policies should be adopted accordingly to promote Central China to improve resource utilization rate, production efficiency and technological innovation, so as to promote economic growth.

Keywords: environmental regulation policy, economic development, ecological environment

1. Introduction

China's environmental regulatory policies have undergone tremendous changes in the past seven decades. From 1949 to 1977, with the process of industrialization, China's environmental regulation policy established the basic framework, and the government issued some basic policies related to environmental protection during this period, mainly emphasizing the problem of hygiene during production activities, and also adopted appropriate prevention and control measures for the heavily polluted production process. During this period, a complete legal system and normative charter were lacking. At this time, China's economy was in its infancy, with low economic aggregate and scientific level.

From 1978 to 1991, due to the reform and opening up, China's ownership relations were no longer a single public ownership, and the non-public economy was fully developed. In 1978, the first session of the Fifth National People's Congress of the People's Republic of China adopted Article 11 of the

Economic Development And Environmental Policy:

Economic Development and Environmental Sustainability Ramón López, Michael A. Toman, 2006-06-29 Economic growth as we know it today cannot persist indefinitely if it entails continuous degradation of natural resources and the environment. While in a few countries around the world it appears that environmental degradation has been the result of rapid economic growth, in the vast majority of the developing countries the environment has been equally spoiled despite slow or even negative economic growth. This book provides new insights on the common roots of economic stagnation, poverty, and environmental degradation which unfortunately generally reside in misguided government policies and priorities. By doing this, the volume seeks to provide a broader policy option framework than those found in conventional policy analyses, mainly dominated by the Washington Consensus. It shows that a major omission of the conventional view is that governments tend to allocate government expenditures in a biased way favouring subsidies to the economic elites to the detriment of investments in public goods including human capital, R D, as well as the development of institutions, environmental and otherwise, which are vital for long run growth, poverty reduction, and environmental sustainability.

Local Economic Development and the Environment David Gibbs, 2005-07-08 This book focuses upon the potential to integrate economic and environmental policies at the local and regional scale. Local initiatives are investigated within their wider economic and environmental policy contexts in order to illustrate both the constraints and opportunities for local policy makers. Attention is given to global economic trends as well as to the specific policy contexts of the European Union and the national contexts of the UK, USA, Australia, Japan, and Sweden. The key principles for designing integrative policies and descriptions of initiatives and projects in a variety of locations are also considered.

The Evolving Relationship between Economy and Environment Kazuhiro Okuma, 2017-03-29 This book sheds new light on the relationship between economy and the environment by approaching the issue from evolutionary and institutional economics. Building a framework of theory and empirical analysis, it provides an in depth perspective on how economic growth and environmental policy interact and historically evolve. Orthodox environmental economics usually understands environmental issues under the rules of market economy, while environmental sciences subordinate economy to physical constraints of the environment. Instead of these hierarchical visions, this book recognizes economy and the environment as co-evolving systems. The theoretical framework is elaborated based on the regulation and post Keynesian

theories combined An idea of three dimensional factors capital labor and the environment leads to conceptual and mathematical models which will be applicable to wider analyses Using this framework Japanese history is analyzed as a typical example of environmental policy development Historical transformations of environmental policies and growth regimes are explained using indices and econometric analysis Experiences of strict regulations with positive economic impacts are also identified These works lead to some interesting implications which include mechanisms the possibility and conditions of green growth This book proposes a new approach by bridging the gap between evolutionary institutional economics and environmental economics which should be stimulating to them both and possibly open the door for a new research avenue Guide to Sustainable Development and Environmental Policy William L Ascher,Natalia

The purpose of this research is to figure out the obstacles to effective environmental policy implementation in developing and developed countries The study has relied heavily upon qualitative research by using secondary literature and data The working hypothesis of this study is that there is a correlation between economic development and environmental sustainability and developing countries due to putting economic development on top of their agenda find it more challenging to implement environmental policies than developed countries The relationship between economic growth and environment can be seen as vicious cycle each of them contributing to the other in different ways The research also lists other institutional obstacles to effective policy implementation like the decision making process and political culture of each country The other barriers that hinder environmental policy implementation are behavioral obstacles in both developing and developed countries and the lack of research and development in developing countries Before laying down those obstacles the literature part of this research expands upon the issue in general and presents theories relevant to the conceptual and practical aspects of the topic It seeks to explain the variables involved in more detail Theories like institutionalism neo institutionalism Regime theory collective action serve as means of explaining the issue itself problems associated with them and the ways of going about the issues In the end conclusions and a number of recommendations are drawn from the results obtained
