

COST-BENEFIT ANALYSIS

Cost-benefit analysis refers to an assessment of the benefits of a particular course of action, weighed against the costs incurred.

OVERVIEW

This type of analysis is useful for identifying the best path forward among a range of possible options, each with their own pros and cons. It is most commonly used in economics. Cost-benefit analysis has two main applications:

1. Determining the soundness of a decision.
2. Providing a basis for comparing alternative decisions.

EXAMPLE

A company decides to conduct a cost-benefit analysis of hiring 10 new workers.

- Total costs: \$200,000
- Total benefits: \$250,000

The company can generate an extra \$50,000 each year, so they should go through with the decision and hire 10 new workers.

Climate Change, Climate Science and Economics G. Cornelis van Kooten, 2012-08-30 This volume enables readers to understand the complexity associated with climate change policy and the science behind it For example the author describes the criticism and defense of the widely known hockey stick temperature graph derived from combining instrumental data and proxy temperature indications using tree ring ice core and other paleoclimatic data Readers will also learn that global warming cannot easily be avoided by reducing CO2 and other greenhouse gas emissions in rich countries Not only is emissions reduction extremely difficult in rich countries but demands such as the UN mandate to improve the lives of the poorest global citizens cannot be satisfied without significantly increasing global energy use and CO2 emissions Therefore the author asserts that climate engineering and adaptation are preferable to mitigation particularly since the science is less than adequate for making firm statements about the Earth's future climate Readers will also learn that global warming cannot easily be avoided by reducing CO2 and other greenhouse gas emissions in rich countries Not only is emissions reduction extremely difficult in rich countries but demands such as the UN mandate to improve the lives of the poorest global citizens cannot be satisfied without significantly increasing global energy use and CO2
