Frontiers in Water Resource Economics Renan-Ulrich Goetz, Dolores Berga, 2006-03-09 Most of the books published previously in the field of water resource economics focus on particular aspects of water economics such as institutions pricing or water markets but none of them have given particular attention to methodological questions However the applied methodology within economic research has made some remarkable advances over the last 10-20 years Some of these advances are of particular interest to the field of water economics Therefore we think that a book that focusing on methodological advances within the field of water resource economics and showing how these advances can

be applied in economic analysis of water issues makes a nice complement to the existing literature in this field We identified five areas where we consider the methodological advances to be of particular importance 1 asymmetric information and game theory 2 uncertainty 3 space 4 water quality and 5 production and technology adoption The selected papers for the book fall entirely within these categories The book *Frontiers in Water Resource Economics* draws to a great extent on papers which were presented at the 7 Conference of the International Water and Resource Economics Consortium June 3-5 2001 held in Girona Catalonia Spain This conference was jointly organized with the 4 Conference of Environmental and Resource Economics by the Department of Economics University of Girona

The Economics of Water Demands Steven Renzetti, 2012-12-06 This book arose out of a paper that I wrote for the World Bank at the request of Ariel Dinar the editor for the series in which this volume appears I began that paper by pointing to the growing importance of demand side considerations in water resources The provision of potable water is one of government's oldest functions with evidence of this activity stretching back thousands of years During much of that time water demands were taken as exogenously given and the principle task of authorities was defined as an engineering one how to supply a given quantity of water at least cost In recent years however concerns have arisen from observations of excessive water use degraded water quality and continued inadequate service for many especially the very poor As a result of these and other concerns there is a growing effort to view water resource allocation from a perspective that incorporates consumers preferences along with supply constraints into management plans Renzetti 2000 p 123 The purpose of this volume is to examine in greater detail than was possible in that article what is known regarding the economic characteristics of the demand for water Thus this book is meant to be an extended critical review of the state of the art

Determining the Economic Value of Water Robert A. Young, John B. Loomis, 2014-07-23 Water provides benefits as a commodity for agriculture industry and households and as a public good such as fisheries habitat water quality and recreational use To aid in cost benefit analysis under conditions where market determined price signals are usually unavailable economists have developed a range of alternative valuation methods for measuring economic benefits This volume provides the most comprehensive exposition to date of the application of economic valuation methods to proposed water resources investments and policies It provides a conceptual framework for valuation of both commodity and public good uses of water addressing non market valuation techniques appropriate to measuring public benefits including water quality improvement recreation and fish habitat enhancement The book describes the various measurement methods illustrates how they are applied in practice and discusses their strengths limitations and appropriate roles In this second edition all chapters have been thoroughly updated and in particular the coverage of water markets and valuation of ecosystem services from water has been expanded Robert Young author of the 2005 edition has been joined for this new edition by John Loomis who brings additional expertise on ecosystem services and the environmental economics of water for recreational and other public good uses of water

Water Development and Poverty Reduction I.H.

Olçay Ünver, Rajiv K. Gupta, Aysegül Kibaroglu, 2012-12-06 In the book's four Parts the interdisciplinary approach to many issues contributes to the relationship between water and poverty. Part I includes articles on the conceptual and methodological issues concerning poverty reduction through water resources development. It also offers analysis of quantitative measurements of poverty reduction including some approaches for creating a Water Poverty Index. Part II considers the institutional frameworks for management of water and poverty reduction. Topics range from community based decision making to international leadership. Part III encompasses discussions on participatory irrigation management and the privatization of urban water supplies and sewerage and the link to poverty. Case studies from India, Turkey and Jordan make up Part IV. The studies present diverse water management and development practices for poverty reduction including realistic pricing and effective irrigation practices, the use of water as an engine for sustainable development, small and large scale strategies for reducing the risks and uncertainties in water availability and food security, the economic value of improved water supplies and the positive impact of small scale development projects.

Agricultural Biodiversity and Biotechnology in Economic Development Joseph Cooper, Leslie Lipper, David Zilberman, 2006-05-27 The topics addressed in this book are of vital importance to the survival of humankind. Agricultural biodiversity encompassing genetic diversity as well as human knowledge is the base upon which agricultural production has been built and protecting this resource is critical to ensuring the capacity of current and future generations to adapt to unforeseen challenges. Agricultural biodiversity underpins the productivity of all agricultural systems and is particularly important for poor and food insecure farmers who maintain highly diverse production systems in response to the marginal and risky production conditions they operate under. Understanding the importance of agricultural biodiversity in the livelihoods of the food insecure and enhancing its performance through the use of a variety of tools including biotechnology is a critically important issue in the world today where over 800 million people have insufficient food to meet minimum needs. A strong theme that runs throughout the book is the importance of good public policy interventions to promote the provision of public goods associated with agricultural biodiversity conservation and directing biotechnology development to meet the needs of the poor. The book's primary innovation is that it describes the relationship between biotechnology and plant genetic diversity and puts these in the context of agricultural development. Both the conservation of plant genetic diversity and agricultural biotechnology have received extensive examination but the linkages between the two have not despite the apparently obvious relationship between the two.

Payment for Environmental Services in Agricultural Landscapes Leslie Lipper, Takumi Sakuyama, Randy Stringer, David Zilberman, 2009-03-21 In recent years development policy has responded to an increasing concern about natural resource degradation by setting up innovative payment for environmental services (PES) programs in developing countries. PES programs use market and institutional incentives in order to meet both environmental and poverty alleviation objectives. However their optimal design implications for the rural poor and how these initiatives integrate into international

treaties on global warming and biodiversity loss are still being discussed This book addresses these issues by scrutinizing analytical tools providing policy insights and stimulating debate on linkages between poverty alleviation and environmental protection In particular it turns attention towards the role of environmental services in agricultural landscapes as they provide a living for many poor in developing countries It serves as a valuable reference for academics and students in various disciplines as well as for policy makers and advisors This book is a co publication between Springer and the Food and Agriculture Organization of the United Nations *Regulating Agricultural Biotechnology* Richard E. Just, Julian M. Alston, David Zilberman, 2006-12-26

This book presents the first thorough economic analysis of current agricultural biotechnology regulation The contributors most of whom are agricultural economists working either in universities or NGOs address issues such as commercial pesticides the costs of approving new products liability benefits consumer acceptance regulation and its impacts transgenic crops social welfare implications and biosafety Policy Reforms and Agriculture Development in Central Asia Sandjar Djalalov, Suresh Chandra Babu, 2006-07-02 Achieving sustainable agricultural development is at the forefront of the poverty reduction objective of the Central Asian republics Kazakhstan the Kyrgyz Republic Tajikistan Turkmenistan and Uzbekistan Since independence the countries of the Central Asian region have undergone a series of transition from centrally planned economies to a more market oriented system Wide ranging policy reforms have been implemented although in varying degrees in the five Central Asian countries Despite great efforts by the countries and the external advice and efforts of international agencies to help them to follow a dynamic growth path the progress in policy reforms has been frustratingly slow Generating momentum to reorient the approach and the sequencing of policy reform packages will require rethinking of the policy reform process This is particularly so in the food agriculture and natural resource sectors This further requires improved understanding among the policymakers donors and international agencies of the impact of policy alternatives so that policy reforms and the speed with which they have been implemented are consistent with the objectives and the social and political realities of individual countries in the region Involving the local policy research community in identifying critical issues and challenges setting priorities among them for food and agricultural and natural resource policy research and analysis and implementing joint research studies is the best way to generate knowledge on the impact of policy reforms and to increase ownership of policy design and implementation

Braving the Currents Tamra Pearson d'Estree, Bonnie B.G. Colby, 2006-05-02 Braving the Currents systematically identifies applies and evaluates criteria to define success in complex multi party natural resource disputes The authors elucidate the full range of criteria for defining success that researchers stakeholders and practitioners have relied on as they have participated in and reflected upon environmental conflict resolution CR efforts They examine 28 success criteria from many angles present a method for systematically considering all the elements necessary for successful environmental CR and then apply this analytic framework to eight specific western U S water conflicts The criteria are assessed in terms of their

accessibility reliability validity and overall usefulness in evaluating specific conflict cases and different resolution methods The book concludes with observations about successfully resolved disputes a summary of what the authors have learned through their extensive evaluations and a discussion of how public policies can contribute to dispute prevention and management While the cases focus on water conflicts their processes and assessments are applicable to a wide body of cases At the suggestion of academic reviewers the authors have included Appendix A A Guidebook which enhances the book s text applicability by providing detailed instructions for case documentation and analysis This book will be of particular interest to students and instructors of conflict resolution environmental studies public policy negotiation and resource management public and private sector managers researchers practitioners and attorneys and conflict resolution professionals *Bridges Over Water* Ariel Dinar,2007 NAME **Handbook of Social Networks and the Environment** Michele L. Barnes,Örjan Bodin,2025-08-11 This Handbook examines how social networks underpin environmental problems and also influence the spread of sustainable innovations exploring issues of collaboration power and social influence in environmental contexts It provides an accessible framework for understanding the complex interplay between social dynamics and environmental problems highlighting how social networks can shape and potentially solve pressing environmental challenges Bringing together diverse case studies leading specialists outline the role of social networks in environmental management policy risk disasters and climate adaptation Bridges Over Water: Understanding Transboundary Water Conflict, Negotiation And Cooperation (Second Edition) Ariel Dinar,Shlomi Dinar,Daene C Mckinney,Stephen C Mccaffrey,2013-02-21 Bridges over Water places the study of transboundary water conflicts negotiation and cooperation in the context of various disciplines such as international relations international law international negotiations and economics It demonstrates their application using various quantitative approaches such as river basin modeling quantitative negotiation theory and game theory Case studies of particular transboundary river basins lakes and aquifers are also considered This second edition updates the literature on international water and in depth analyses on political developments and cooperation between riparian states With an appended chapter on principles and practices of negotiation and a new case study on the La Plata Basin this edition is a timely update to the field of transboundary water studies **Giannini Reporter** ,2003 **Cooperative Game Theory and Its Application to Natural, Environmental, and Water Resource Issues** ,2006 Salinity in Irrigation and Water Resources Dan Yaron,1981-02-01 The salinity problem in irrigation an introductory review evaluation and classification of water quality for irrigation effects of salinity and soil water regime on crop yields irrigation and soil salinity fertilization and salinity impact of irrigation on the quality of groundwater and river flows economic evaluation of irrigation with saline water within the framework of farm Economic impacts of regional economic effects of changes in irrigation water salinity within a river basin framework the case of the colorado river *Plan Formulation Appendix* ,1991 The British National Bibliography Arthur James Wells,2002 *Climate Change and Agriculture* Robert O. Mendelsohn,Ariel Dinar,2009-01-01

The specific focus of this seminal work is on the economic impact of climate change on agriculture world wide and how faced with the resultant environmental alterations agriculture might adapt under varied and varying conditions Enhanced with a detailed and comprehensive index Climate Change and Agriculture is highly recommended for academic library environmental studies and economic studies reference collections and supplemental reading lists The Midwest Book Review Despite its great importance there are surprisingly few economic studies of the impact of climate on agriculture and how agriculture can adapt under a variety of conditions This book examines 22 countries across four continents including both developed and developing economies It provides both a good analytical basis for additional work and solid results for policy debate concerning income distributional effects such as abatement adaptation and equity Agriculture and grazing are a central sector in the livelihood of many people particularly in developing countries This book uses the Ricardian method to examine the impact of climate change on agriculture It also quantifies how farmers adapt to climate The findings suggest that agriculture in developing countries is more sensitive to climate than agriculture in developed countries Rain fed cropland is generally more sensitive to warming than irrigated cropland and cropland is more sensitive than livestock The adaptation to climate change results reveal that farmers make many adjustments including switching crops and livestock species adopting irrigation and moving between livestock and crops The results also reveal that impacts and adaptations vary a great deal across landscapes suggesting that adaptation policies must be location specific Finally the book suggests a research agenda for the future Economists in academia and the public sector policy analysts and development agencies will find this broad study illuminating
