Ecosystem Approach In Anthropology:

The Ecosystem Approach in Anthropology Emilio F. Moran, 1990 A reassessment of the ecosystem concept for The Ecosystem Concept In Anthropology Emilio F Moran, Susan H Lees, 2019-09-06 Critics of the ecosystem concept have noted the tendency of ecosystem based studies to overemphasize energy flow to rely on functionalist assumptions to neglect historical and evolutionary factors and to overlook the role of individuals as the locus of natural selection and decision making In this volume leading figures in the study of biological and human ecology evaluate these criticisms and propose ways to advance the state of knowledge in ecological research **Environmental Social Science** Emilio F. Moran, 2011-09-09 Environmental Social Science offers a new synthesis of environmental studies defining the nature of human environment interactions and providing the foundation for a new cross disciplinary enterprise that will make critical theories and research methods accessible across the natural and social sciences Makes key theories and methods of the social sciences available to biologists and other environmental scientists Explains biological theories and concepts for the social sciences community working on the environment Helps bridge one of the difficult divides in collaborative work in human environment research Includes much needed descriptions of how to carry out research that is multinational multiscale multitemporal and multidisciplinary within a complex systems theory context The Structure and Dynamics of Human Ecosystems William R. Kay, Nina-Marie E. Lister, 2008 Is sustainable TUVWYZ development a workable solution for today s environmental problems Is it scientifically defensible Best known for applying ecological theory to the engineering problems of everyday life the late scholar James J Kay was a leader in the study of social and ecological complexity and the thermodynamics of ecosystems Drawing from his immensely important work as well as the research of his students and colleagues The Ecosystem Approach is a guide to the aspects of complex systems theories relevant to social ecological management Advancing a methodology that is rooted in good theory and practice this book features case studies conducted in the Arctic and Africa in Canada and Kathmandu and in the Peruvian Amazon Chesapeake Bay and Chennai India Applying a systems approach to concrete environmental issues this volume is geared toward scientists engineers and sustainable development scholars and practitioners who are attuned to the ideas of the Resilience Alliance an

international group of scientists who take a more holistic view of ecology and environmental problem solving Chapters cover the origins and rebirth of the ecosystem approach in ecology the bridging of science and values the challenge of governance in complex systems systemic and participatory approaches to management and the place for cultural diversity in the quest **Ecosystem Management** William Burch, 2020-09-10 This book documents some of the for global sustainability perceptions strategies and actions of natural resource agencies in the twenty first century as they seek to respond to the changed reality influencing their policies and practices It considers some of the responses in tools techniques and organizational change Greening the College Curriculum Jonathan Collett, Stephen Karakashian, 2013-04-10 Greening the College Curriculum provides the tools college and university faculty need to meet personal and institutional goals for integrating environmental issues into the curriculum Leading educators from a wide range of fields including anthropology biology economics geography history literature journalism philosophy political science and religion describe their experience introducing environmental issues into their teaching The book provides a rationale for including material on the environment in the teaching of the basic concepts of each discipline guidelines for constructing a unit or a full course at the introductory level that makes use of environmental subjects sample plans for upper level courses a compendium of annotated resources both print and nonprint Contributors to the volume include David Orr David G Campbell Lisa Naughton Emily Young John Opie Holmes Rolston III Michael E Kraft Steven Rockefeller and others Navigating Social-Ecological Systems Fikret Berkes, Johan Colding, Carl Folke, 2008-04-24 In the effort towards sustainability it has become increasingly important to develop conceptual frames to understand the dynamics of social and ecological systems Drawing on complex systems theory this book investigates how human societies deal with change in linked social ecological systems and build capacity to adapt to change The concept of resilience is central in this context Resilient social ecological systems have the potential to sustain development by responding to and shaping change in a manner that does not lead to loss of future options Resilient systems also provide capacity for renewal and innovation in the face of rapid transformation and crisis. The term navigating in the title is meant to capture this dynamic process Case studies and examples from several geographic areas cultures and resource types are included merging forefront research from natural sciences social sciences and the humanities into a common framework for new insights on sustainability Living with Biodiversity in an Island Ecosystem Takuo Furusawa, 2016-01-28 This book presents a detailed case study of ecological and cultural interactions between the people and their natural environment at Roviana Lagoon Solomon Islands a land of rich biodiversity This volume documents the subsistence lifestyle of the people and their indigenous ecological knowledge analyzes the effects of recent socioeconomic changes on the people and ecosystem and proposes future directions for sustainability The contents have been designed to answer questions such as What kinds of factors have determined whether current human actions are sustainable or will result in a collapse of biocultural diversity in the Solomon Islands How do Solomon Islanders recognize nature and biodiversity conservation in

traditional ways or under socioeconomic changes and How can harmony between humans and nature be achieved in the Solomon Islands under changing socioeconomic conditions A truly transdisciplinary approach is applied integrating theories of human ecology quantitative ethnobiology and folk ecology and methods of vegetation surveys ethnographic fieldwork remote sensing and health surveys in order to link different domains of humans and the natural world In addition this work focuses on the importance of understanding of diversity not only in natural environments but also in human societies and will be a valuable source for many especially ecologists anthropologists conservation practitioners and rural development Current Trends in Human Ecology Alpina Begossi, Priscila Lopes, 2009-01-14 An exercise of interdisciplinarity at the crossroads of humans and the environment this could be one definition of human ecology as it is demonstrated within this book Examples of different branches of human ecology are shown as feasible alternatives to understand the interactions of human culture and behaviour with the natural environment from all parts of the world Current trends ranging from climate change to ecological knowledge and environmental comanagement are deeply exploited using a diversified array of empirical case studies Theoretical aspects are included and examined in every case including the evolution of culture values and webs of information within cultures. The central theme approaches and reveals the social cultural economic and ecological processes which link human beings to their environment From a mixture of practice and theory we emerge with alternatives to mitigate and prevent the accelerating negative changes currently witnessed on our planet where increasingly fewer people are safe More importantly this book provides examples showing how those whose lives are deeply rooted on a direct natural resource dependency are the first to be affected by the global trend of environmental degradation Small scale fishers farmers and herders from the tropics and from cold regions have their livelihood affected by global changes regional politics and cultural exchanges Whether and how they will survive adapt or embody such changes is not known and this is one more reason to include and involve local groups when searching for sustainable solutions In a changing world exploring current threats and impacts of human actions on the environment is a necessity but bringing about alternatives some of them already part of traditional human practices is urgent and can turn to be a promising solution Anthropology sociology and ecology come together in this book where the unifying goal of theorizing and practising interdisciplinarity in human ecology is shown by closely tracking examples of current trends and developments This book is a harvest from the XV International Meeting of the Society for Human Ecology engaging over 200 people from 27 countries from all continents held in Rio de Janeiro Brazil October 4 7 2007 organized by A Begossi and P Lopes with the support of the Fisheries and Food Institute FIFO and the State University of Campinas UNICAMP This volume ends by indicating several lines of thought and of analyses on current subjects as follows sustainability in different cultural contexts and perspectives methods towards approaching sustainable systems and current global concerns Those include agriculture in tropical areas slash and burn practices climate change and nature and human behavioural patterns among

others **Survival on Meagre Resources** Leif O. Manger,1996 Summarizes research carried out under the Red Sea Area Programme started in 1987 Describes the physical environment of the area and discusses ways in which the Hadendowa people exploit their mountain environment Focuses on the establishment and working of adaptive units within the population Discusses the effects of drought in the 1980s and examines strategies for survival and for pastoral rehabilitation

Zooarchaeology Elizabeth J. Reitz, Elizabeth S. Wing, 1999-02-04 Zooarchaeology is a detailed reference manual for students and professional archaeologists interested in identifying and analysing animal remains from archaeological sites Drawing on material from all over the world and covering a time span from the Pleistocene to the nineteenth century AD the emphasis is on animals whose remains inform us about many aspects of the relationships between humans and their natural and social environments especially site formation processes subsistence strategies and paleoenvironments. The authors discuss suitable methods and theories for all vertebrate classes and molluscs and include hypothetical examples to demonstrate these There are extensive references and illustrations to help in the process of identification Socio-Ecological Research Simron Jit Singh, Helmut Haberl, Marian Chertow, Michael Mirtl, Martin Schmid, 2012-11-13 The authors in this volume make a case for LTSER's potential in providing insights knowledge and experience necessary for a sustainability transition This expertly edited selection of contributions from Europe and North America reviews the development of LTSER since its inception and assesses its current state which has evolved to recognize the value of formulating solutions to the host of ecological threats we face Through many case studies this book gives the reader a greater sense of where we are and what still needs to be done to engage in and make meaning from long term place based and cross disciplinary engagements with socio ecological systems Advances in Ecological Research ,1974-11-29 Advances in Ecological Research The 'Ecosystem Approach' in International Environmental Law Vito De Lucia, 2019-03-28 The ecosystem approach broadly understood as a legal and governance strategy for integrated environmental and biodiversity management has been adopted within a wide variety of international environmental legal regimes and provides a narrative a policy approach and in some cases legally binding obligations for States to implement what has been called a new paradigm of environmental management In this last respect the ecosystem approach is also often considered to offer an opportunity to move beyond the outdated anthropocentric framework underpinning much of international environmental law thus helping re think law in the Anthropocene Against this background this book addresses the question of whether the ecosystem approach represents a paradigm shift in international environmental law and governance or whether it is in conceptual and operative continuity with legal modernity. This central question is explored through a combined genealogical and biopolitical framework which reveals how the ecosystem approach is the result of multiple contingencies and contestations and of the interplay of divergent and sometimes irreconcilable ideological projects The ecosystem approach this books shows does not have a univocal identity and must be understood as both signalling the

potential for a decisive shift in the philosophical orientation of law and the operationalisation of a biopolitical framework of control that is in continuity with and even intensifies the eco destructive tendencies of legal modernity It is however in revealing this disjunction that the book opens up the possibility of moving beyond the already tired assessment of environmental law through the binary of anthropocentrism and ecocentrism <u>I Am Destroying The Land!</u> Susan C Stonich, 2021-01-07 This book is about interconnections those among the historical geographic demographic social economic and ecological aspects of development as well as how Central Americans struggle with the interplay of increasing poverty and environmental degradation Centering on the case of southern Honduras and expanding to include the Central American region Susan Stonich's analysis employs an integrative approach that builds on a strong and varied methodological foundation to encompass both political economy and ecology Stonich examines the systemic linkages among the dynamics of dominant development models and associated patterns of capitalist accumulation regional demography rural impoverishment and environmental decline By casting the discussion against the backdrop of southern Honduras she presents a powerful historical record of how larger socio political communities impact individuals and the natural environment and how in turn people respond She charts the destiny of peasant groups within the dynamics of contemporary capitalism recognizing that the fates of the peasantry and the natural environment are intimately linked Stonich's study contributes to an improved understanding of the complex interrelationships between social processes and environmental degradation offering a timely and pertinent comment on one of the most serious modern challenges Human-Environment Interactions Eduardo S. Brondízio, Emilio F. Moran, 2012-11-15 Drawing on research from eleven countries across four continents the 16 chapters in the volume bring perspectives from various specialties in anthropology and human ecology institutional analysis historical and political ecology geography archaeology and land change sciences The four sections of the volume reflect complementary approaches to HEI health and adaptation approaches land change and landscape management approaches institutional and political ecology approaches and historical and archaeological approaches Nature and Society Philippe Descola, Gisli Palsson, 2003-12-16 The contributors to this book focus on the relationship between nature and society from a variety of theoretical and ethnographic perspectives Their work draws upon recent developments in social theory biology ethnobiology epistemology sociology of science and a wide array of ethnographic case studies from Amazonia the Solomon Islands Malaysia the Mollucan Islands rural comunities from Japan and north west Europe urban Greece and laboratories of molecular biology and high energy physics The discussion is divided into three parts emphasising the problems posed by the nature culture dualism some misguided attempts to respond to these problems and potential avenues out of the current dilemmas of ecological discourse Intelligence and Personality Janet M. Collis, Samuel J. Messick, Ulrich Schiefele, 2012-10-12 This volume brings together leading researchers in a major new effort to bridge the historical gap between the domains of ability and personality The result is a remarkable collection of chapters analyzing critical issues at

the interface style structure process and context Contributors address intelligence and its relation to temperament and character hierarchical models of cognition and personality judgmental data in personality research and structural issues in ability and personality intelligence and conation goal theories the role of conation in the learning environment motivation and arousal intelligence and style stylistic preferences the role of disposition cognitive style and its measurement test taking style and intelligence and personality in context regularities of functioning contextual effects in cultural variation control and Ecological Planning Forster Ndubisi, 2003-04-30 Chosen by Choice consistency the concept of successful intelligence Magazine as an Outstanding Academic Title for 2003 Ecological planning is the process of understanding evaluating and providing options for the use of landscape to ensure a better fit with human habitation In this ambitious analysis Forster Ndubisi provides a succinct historical and comparative account of the various approaches to this process He then reveals how each of these approaches offers different and uniquely useful perspectives for understanding the dialogue between human and environmental processes Ndubisi begins by examining the philosophies behind and major contributors to ecological thinking during the past 150 years as well as the paradigm shift in planning that occurred in recent decades as a result of a growing global ecological awareness He then turns to landscape suitability analysis and discusses alternative approaches to ecological planning such as applied human ecology applied landscape ecology and others Finally he offers a comparative synthesis of the approaches in order to reveal the theoretical and methodological assumptions inherent when planners choose one approach over the other Ndubisi concludes that no one approach can by itself adequately address the whole spectrum of ecological planning issues For this reason he offers guidance as to when it may be appropriate for landscape architects and planners to emphasize one approach rather than another
