Rao,2003-08-01 A discussion of all the key issues in the use of human pluripotent stem cells for treating degenerative diseases or for replacing tissues lost from trauma On the practical side the topics range from the problems of deriving human embryonic stem cells and driving their differentiation along specific lineages regulating their development into mature cells and bringing stem cell therapy to clinical trials Regulatory issues are addressed in discussions of the ethical debate surrounding the derivation of human embryonic stem cells and the current policies governing their use in the United States and abroad including the rules and conditions regulating federal funding and questions of intellectual property      Adult Craniopharyngiomas Emmanuel Jouanneau,Gérald Raverot,2020-04-09 This volume focuses on adult craniopharyngiomas offering various perspectives The first part of the book provides an up to date overview of the pathogenesis and management of adult craniopharyngiomas helping readers understand the pathogenesis and molecular pathways It highlights the importance of animal models for addressing molecular keys and for developing targeted therapies The second part deals with clinical management detailing the latest results in the era of endoscopic surgery including the major contribution of the extended nasal endoscopic approaches for suprasellar and retrochiasmatic tumors The book also discusses the key aspects of these tumors and how to manage them The last part of the book addresses the future therapies and recurrences after surgery and radiotherapy This volume is of interest to neurosurgeons endocrinologists paediatricians radiologists and oncologists

Developing stem cell-based therapies for neural repair Clare Parish,Lachlan Thompson,2015-01-28 Current pharmacotherapies and surgical intervention provide limited benefit in the treatment of neural injuries or halting disease progression and has resulted in significant hope for the successes of stem cell research The properties of stem cells render them appropriate for cell replacement therapy endogenous repair disease modeling as well as high throughput drug screening and development Such applications will aide in increasing our knowledge and developing treatments for neurodegenerative disorders such as Parkinson s disease and Huntington s diseases as well as neural traumas including ischemic brain damage and traumatic brain injury This Frontiers Research topic encouraged contributions from the general field of stem cell biology with a particular emphasis on utilizing these cells to develop new therapies for neural repair Related articles deal with issues such as breakthroughs in stem cell proliferation differentiation methodologies using pluripotent and neural stem cells for transplantation and endogenous repair the use of patient derived stem cells for disease modeling using stem cells for drug discovery as well as the ethical issues related to the use of stem cells      Androgenesis and Haploid Plants Yves Chupeau,1998-05-20 Jointly published with INRA Paris The use of haploid plants is of increasing importance in plant biology and plant breeding This book illustrates how the advances in plant molecular and cell biology provide an exciting means for the analysis of androgenesis in terms of pollen development and the initiation of embryogenesis It

provides both an appraisal of techniques and their practical application and is the most up to date source of information about the biology of gametophytes      **Atlas of Human Tumor Cell Lines** Robert K.M. **Principles of Perinatal-Neonatal Metabolism** Richard M. Cowett, 2012-12-06. Over the last quarter century or so, specialization within obstetrics and gynecology and pediatrics has resulted in the development of the disciplines of maternal-fetal medicine and neonatology, respectively. A primary focus of maternal-fetal medicine has been to understand the mechanisms of premature delivery and develop treatment modalities for improving the length of gestation. A primary focus of neonatology has been to understand the causes of respiratory distress in the neonate. Success has resulted not only in the lengthening of gestation but an improved understanding of the causes and treatment of neonatal respiratory disease. With increasing success has come the necessity to understand the metabolic principles of the parturient, the fetal-placenta unit, and the neonate. These principles are clearly very important from multiple aspects. Increased understanding of metabolism of the pregnant woman would explain the aberrations occurring in normal and abnormal pregnancy and improve nutritional support for the parturient. A prime example of altered metabolism is the parturient with diabetes. Understanding metabolism of the fetal-placenta unit is necessary to increase the probability that the fetus will be born appropriate for size, irrespective of the gestational age. The various components of neonatal metabolism are important not only for understanding the changes in physiology and biochemistry occurring in the developing neonate but the principles by which nutritional support should be provided.
