**Beryllium** Edward S. Grew,2018-12-17 Volume

50 of Reviews in Mineralogy and Geochemistry treats Beryllium and its cosmogenic isotopes This volume includes an overview of Be studies in the earth sciences and a systematic classification of Be minerals based on their crystal structure It treats the analysis of these minerals by the secondary ion mass spectroscopy as well as experimental studies of systems involving Be Moreover this volume reviews the behavior of Be in the Solar System with an emphasis on meteorites the Moon and Mars and the implications of this behavior for the evolution of the solar system It gives an overview of the terrestrial geochemistry of Be and discusses the contamination of the environment by this anthropogenic toxin It reports use of the longer lived Be 10 to assess erosion rates and other surficial processes and how this isotope can yield independent temporal records of geomagnetic field variations for comparison with records obtained by measuring natural remnant magnetization be a chemical tracer for processes in convergent margins and can date events in Cenozoic tectonics It reviews applications of the shorter lived isotope Be 7 in environmental studies as well Residual phases include acidic plutonic and volcanic rocks whose geochemistry and evolution are covered while granitic pegmatites which are well known for their remarkable if localized Be enrichments and a wide variety of Be mineral assemblages are reviewed Not all Be concentrations have obvious magmatic affinities for example one class of emerald deposits results from Be being introduced by heated brines Pelitic rocks are an important reservoir of Be in the Earth s crust and their metamorphism plays a critical role in recycling of Be in subduction zones eventually anatexis processes complete the cycle providing a source of Be for granitic rocks      **The**

Voudouris,Stefanos Karamelas,Vasilios Melfos,Ian Graham,2020-03-10 Gems have been used in the manufacture of jewellery and as ornaments since antiquity Considering gems recent statistics have shown that about 15 billion Euros are annually at stake Nowadays gemmology i e the study of gem materials is one of the most expanding fields in the earth sciences positioned between academia and industry As an applied science in gemmology the instruments used should be non or microdestructive and their cost should be reasonable both in terms of equipment and time consumption Gemmology can also be used contribute to the development of pure science and in some cases destructive techniques may have to be used Taking into account the fact that gems are albeit rarely available for scientific research this compilation of 20 articles by around 100 researchers from over 30 different institutions situated in 20 countries from around the globe presented in the Special Issue entitled Mineralogy and Geochemistry of Gems offers very good examples on the application of various methods for their study which will hopefully contribute to our better understanding of gem formation in general and will enhance scientific debates attracting more scientists from various disciplines to get involved in this field      New Publications of the
