Housing the North American City Michael Doucet, John C. Weaver, 1991-08-06 Doucet and Weaver begin this empirical analytical and narrative study with an analysis of the evolution of land development as an enterprise and continue with an examination of house design and construction practices the development of the apartment building and an account of class and age as they relate to housing tenure They also relate developments in Hamilton to the current state of urban historiography using their case study to resolve discrepancies and contradictions in the literature Among the major themes the authors deal with is a controversial exploration of what they see as a central North American urge the desire to own a home Other themes include the social allocation of urban space the quality and affordability of housing the increased interest of large corporations in the land development and financial service industries and a comparative analysis of housing in Canada and the United States The authors have drawn on civic and business records dating from the early nineteenth century to the latest planning data Combining this information with their comprehensive analysis Doucet and Weaver show that current housing problems and potential solutions are better understood when seen as part of a historical process They provide a critical assessment of the ways in which contemporary society produces shelter and question the use of technical innovations alone to resolve housing crises

Square s commercialism signage cultural diversity and social tolerance have been deeply embedded in New York City s

psyche Its symbolic role guaranteed that any plan for its renewal would push the hot buttons of public controversy free

speech property taking through eminent domain development density tax subsidy and historic preservation In Times Square

Roulette Lynne Sagalyn debunks the myth of an overnight urban miracle performed by Disney and Mayor Giuliani to tell the

far more complex and commanding tale of a twenty year process of public controversy nonstop litigation and interminable

timing was all the mid 1990s saw rising international corporate interest in the city was a mecca for mass market

entertainment and synergistic merchandising Sagalyn details the complex relationship between planning and politics and the

role of market forces in shaping Times Square's redevelopment opportunities. She shows how policy was wedded to deal making and how persistent individuals and groups forged both.

Integrated Architecture Liangyong Wu, 2013-12-01

Integrated Architecture is both a historical and contemporary work. The book was first published in 1989 by Wu Liangyong, one of contemporary China's most influential architects and theoreticians, with the title *A General Theory on Architecture*. His eminence is also recognised by the international architectural community; above all, the group of architectural and urban planning theoreticians battling for a more decisive reform to the concepts, methodologies and practices presiding over the construction and requalification of the contemporary metropolis. I first met professor Wu Liangyong in 2005 at the Faculty of Architecture at Tsinghua University of Beijing. Wu Liangyong founded the school in 1949 at the age of 24, together with Liang Sicheng, the father of modern Chinese architectural studies. From this moment, more than sixty-seven years ago, professor Liangyong has remained a central figure in Beijing's academic community. He remains a constant source of inspiration, not only national, to education reforms and, above all, theoretical, methodological and operative research into architecture, the city and the territory. He is a rare figure present throughout a lengthy historical period, witness the world over to tumultuous upheavals in society and its cities. A period whose most dramatic and exalting manifestations were perhaps to be found in China: a period of war, of hope, of revolutions, of great leaps forward, of presumptions, horrors, errors, new leaps forward, and incomprehensible economic growth, of irreversible social and cultural metamorphoses, and what interests us most, as architects, of staggering urban growth and territorial transformations. The intellect of this minute and genteel figure held fast against the storms of history. The observation of events and the humanist and scientific principles of his personal culture continuously nourished an increasingly more effective reflection on the meaning of architecture in today's world. He also clearly saw its inextricable ties to the substance of the city and the impossibility to substitute the figure of the architect-scientist, humanist and artist. A few years after our meeting, having absorbed direct lessons from Wu's work as an architect and theoretician, I proposed an Italian translation of an anthology of his writings. The material was to be drawn from his many books and essays on architecture and the city, published continuously over the course of his incomparable career. Professor Wu Liangyong responded with a challenge: in lieu of this anthology of texts, he proposed a full translation in Italian and English of a book published twenty years ago, 1989's *A General Theory on Architecture*. Given the pace of cultural debate, it would not have been out of place to imagine a book firmly sedimented in history. I understood instead that it was a milestone in the expression of Wu Liangyong's ideas, a benchmark that in all likelihood served as the starting point for his later theories, even the most recent. Published in other fundamental essays, they range across the vast field of human settlements, touching on all components of the man-made environment. Lucio Valerio Barbera
