Cataloging Policy and Support Office,2007 **Thinking in Psychological Science** Jaan Valsiner,2017-12-02 This book explores the development of ideas in psychology s past It is the initial volume in a series intended to shape such ideas into a valuable resource for the discipline s future Scientists in general

are known to ignore their own history considering it to be a graveyard of failures In Thinking in Psychological Science selected ideas of key figures in the cognitive comparative and developmental sides of psychology Karl Duncker Karl Bihler Tamara Dembo Zing Young Kuo C Lloyd Morgan Alexander Chamberlain and Arnold Gesell are traced and the social contexts of their ideas are given a collective analysis focusing on the potential of these ideas for the present state of psychology Representing the scientist as hero has become a necessary component when applying for research monies from governmentally controlled funding agencies Yet the reality is just the opposite Science is not just the product of heroes it is the product of many individuals who often search for solutions to basic problems throughout their lifetimes while only a few arrive at breakthroughs Still familiarity with the flow of thought in the efforts to solve the basic problems of humankind is necessary for any understanding of creativity This book analyzes the processes involved in the search for solutions to major theoretical problems of development Kuo Gesell action and cognition Bihler Bunker Dembo and methodology Morgan Ultimately this is an exciting volume that reveals real science in the making Thinking in Psychological Science will be of interest to students of the social sciences and intellectual history It is ideal for graduate and upper level undergraduate courses in psychology the sociology of science and cognitive science *Foundations of Animal Behavior* Lynne D. Houck, Lee C. Drickamer, 1996-08 Beginning with Darwin's work in the 1870s *Foundations of Animal Behavior* selects the most important works from the discipline's first hundred years forty four classic papers and presents them in facsimile tracing the development of the field These papers are classics because they either founded a line of investigation established a basic method or provided a new approach to an important research question The papers are divided into six sections each introduced by prominent researchers Sections one and two cover the origins and history of the field and the emergence of basic methods and approaches They provide a background for sections three through six which focus on development and learning neural and hormonal mechanisms of behavior sensory processes orientation and communication and the evolution of behavior This outstanding collection will serve as the basis for undergraduate and graduate seminars and as a reference for researchers in animal behavior whether they focus on ethology behavioral ecology comparative psychology or anthropology Published in association with the Animal Behavior Society *Advances in the Study of Behavior* , 1974-11-29 *Advances in the Study of Behavior* **Developmental Psychobiology** Elliott M. Blass, 2012-12-06 ELLIOTT M BLASS Fifteen years have passed since the first volume on developmental psychobiology Blass 1986 appeared in this series and 13 since the publication of the second volume Blass 1988 These volumes documented the status of the broad domain of scientific inquiry called developmental psychobiology and were also written with an eye to the future The future has been revolutionary in at least three ways First there was the demise of a descriptive ethology as we had known it to be replaced first by sociobiology and later by its more sophisticated versions based on quantitative predictions of social interactions that reflected relatedness and inclusive fitness Second there was the emergence of cognitive science including cognitive development as an enormously

strong and interactive multidisciplinary effort Making the functional brain more accessible made this revolution all the more relevant to our discipline In the laboratory immunocytochemical detection of immediate early genes such as *c-fos* now allows us to trace neuronal circuits activated during complex behaviors The functional brain of primates especially humans was also made very accessible through neuroimaging with which we can look at and into brains as they solve and attempt to solve particular tasks Those of us who were trained in neurology as graduate students two or three decades ago recognize only the people in white coats and patients in beds or on gurneys when we visit neurological units today The rest is essentially new

History of Psychology in Autobiography Carl Murchison, 1961 Synthesizing Nature-nurture Gilbert Gottlieb, 2014-09-19 This volume provides a primarily nontechnical summary of experimental and theoretical work conducted over the course of 35 years which resulted in a developmental framework capable of integrating causal influences at the genetic neural behavioral and ecological levels of analysis It describes novel solutions to the nature nurture problem at both the empirical and theoretical levels Following field observations laboratory experiments led to the discovery of the nonobvious prenatal experiential basis of instinctive behavior in two species ground nesting mallard ducklings and hole nesting wood ducklings This work also describes the experiences that lead to the rigid canalization of behavioral development as well as the social and sensory experiences that favor the continuance of flexibility The author also describes in detail a developmental psychobiological systems view that supports a behaviorally and psychologically mediated pathway to evolutionary change in humans and other species Written in a way that is readable to even the nonspecialist the text is accompanied by numerous photographs that illuminate and add personal meaning to the written words Readers will be engaged by the emphasis on the human aspect of the scientific enterprise *Vertebrate Embryology* Waldo Shumway, 1927
