Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group received a standard diet and water, while the experimental group received a standard diet and water with a 10% sucrose solution. The experimental group was further divided into two subgroups: the sucrose group and the control group. The sucrose group received a 10% sucrose solution, while the control group received a standard diet and water. The subjects were monitored for 14 days, and the results were analyzed using a two-way ANOVA.
