The Administration of Health Systems Martin Harrison,2017-07-05 In the late 1960s American society entered a period of rapidly accelerating social change Certainty that U S vast scientific and technical capability would be able to find solutions to all problems began to turn to concern as organizational efforts were unable to keep pace with new developments in a variety of areas The health field with its focus on the well being of individuals felt the impact of these changes particularly strongly Medicines became more focused on isolated health practices as the patient s needs were attended to within groups of unrelated biological systems The emerging thought represented in this collection pushes for the perception of health as a right rather than as something to be earned It argues that deprivation of life saving and life fulfilling opportunities to any populations should not be tolerated The editors also demand more awareness of the implications of isolated health activities and make the case for a comprehensive total health care system Health is no longer just a biological function quality of life is also a concern First published in 1971 by administrators of health agencies teachers and health personnel this work presents perspectives on problems and interpretations of forces and issues that are of continuing importance to health administrators The emphasis on the need to focus on the whole patient rather than just their illness and on providing them with a good life not just a disease free one is still as valid today as it was when this volume was initially published

Leithwood, Judith Chapman, P. Corson, P. Hallinger, Ann Hart, 2012-12-06 EDITORS This introduction to the International Handbook of Educational Leadership and Administration describes some of the motivation for developing the book and several assumptions on which is based much of the work represented in its 31 chapters A synopsis of the contents of those chapters is also provided SOME KEY ASSUMPTIONS It is

sometimes suggested that the search for an adequate understanding of leadership is doomed to fail After all there is little evidence of agreement about the concept in spite of prodigious efforts dating back hundreds if not thousands of years Such a view is captured for exam ple in Bennis observation that Of all the hazy and confounding areas in social psychology leadership theory undoubtedly contends for top nomination Probably more has been written and less is known about leadership than any other topic in the behavioural sciences 1959 page 259 We do not find this state of affairs discouraging nor entirely accurate and of course it did not prevent Bennis from proceeding either One reason for our desire to continue in the face of such discouraging words is that a great deal of leadership research aspires to develop a general theory a theory which applies to all or most domains of organized human activity This aspiration inevitably produces decontextualized and therefore abstract categories of practice Howard Gardner s 1995 depiction of leadership as story telling is a case in point
