Lithography Stefan Landis, 2013-03-04. Lithography is now a complex tool at the heart of a technological process for manufacturing micro and nanocomponents. A multidisciplinary technology, lithography continues to push the limits of optics, chemistry, mechanics, micro and nano fluids etc. This book deals with essential technologies and processes primarily used in industrial manufacturing of microprocessors and other electronic components.

Microfabrication for Industrial Applications Regina Luttge, 2011-08-31. Microfabrication for Industrial Applications focuses on the industrial perspective for micro and nanofabrication methods including large scale manufacturing, transfer of concepts from lab to factory, process tolerance, yield, robustness and cost. It gives a history of miniaturization, micro and nanofabrication and surveys industrial fields of application illustrating fabrication processes of relevant micro and nano devices. Concerning sub-micron feature manufacture, the book explains the philosophy of micro nanofabrication for integrated circuit industry, thin film deposition, waveguide, plastic semiconductor, material processing, packaging, interconnects, stress, e.g. thin film residual, economic and environmental aspects. Micro nanomechanical sensors and actuators are explained in depth with information on applications, materials incl. functional polymers, methods, testing, fabrication, integration, reliability, magnetic microstructures etc. Shows engineers possibilities of dimension, precision, large volume manufacturing of micro computing and displays, beamers, LCD, TFT. Case studies are given for sensors, resonators, probes, transdermal medical systems, micro pumps, valves, inkjets, DNA analysis, lab on a chip, micro cooling.

Nano- and Microfabrication for Industrial and Biomedical Applications Regina Luttge, 2016-06-12. Nano and Microfabrication for Industrial and Biomedical Applications, Second Edition focuses on the industrial perspective on micro and nanofabrication methods including large scale manufacturing, the transfer of concepts from lab to factory, process tolerance, yield, robustness and cost. The book gives a history of miniaturization and micro and nanofabrication and surveys industrial fields of application illustrating fabrication processes of relevant micro and nano devices. In this second edition a new focus area is nanoengineering as an important driver for the rise of novel applications by integrating bio nanofabrication into microsystems. In addition, new material covers lithographic mould fabrication for soft lithography, nanolithography techniques, corner lithography, advances in nanosensing and the developing field of advanced functional materials. Luttge also explores the view that micro and nanofabrication will be the key driver for a tech revolution in biology and medical research that includes a new case study that covers the developing organ on chip concept. Presents an interdisciplinary approach that

makes micro nanofabrication accessible equally to engineers and those with a life science background both in academic settings and commercial R D Provides readers with guidelines for assessing the commercial potential of any new technology based on micro nanofabrication thus reducing the investment risk Updated edition presents nanoengineering as an important driver for the rise of novel applications by integrating bio nanofabrication into microsystems *Document and Image Compression* Mauro Barni,2018-10-08 Although it is true that image compression research is a mature field continued improvements in computing power and image representation tools keep the field spry Faster processors enable previously intractable compression algorithms and schemes and certainly the demand for highly portable high quality images will not abate *Document and Image Compression* highlights the current state of the field along with the most probable and promising future research directions for image coding Organized into three broad sections the book examines the currently available techniques future directions and techniques for specific classes of images It begins with an introduction to multiresolution image representation advanced coding and modeling techniques and the basics of perceptual image coding This leads to discussions of the JPEG 2000 and JPEG LS standards lossless coding and fractal image compression New directions are highlighted that involve image coding and representation paradigms beyond the wavelet based framework the use of redundant dictionaries the distributed source coding paradigm and novel data hiding techniques The book concludes with techniques developed for classes of images where the general purpose algorithms fail such as for binary images and shapes compound documents remote sensing images medical images and VLSI layout image data Contributed by international experts *Document and Image Compression* gathers the latest and most important developments in image coding into a single convenient and authoritative source
