Expressway Bus Operations ,1963 Walter S. Rainville,1963 A compilation based on the submissions of two dozen interested properties regarding their experiences with transit bus operations on expressways in urban metropolitan areas up to July or August 1963      The Industrial Ephemeral Namita Vijay Dharia,2022-07-19 What transformative effects does a multimillion dollar industry have on those who work within it The Industrial Ephemeral presents the untold stories of the people politics and production chains behind architecture real estate and construction in areas surrounding New Delhi India The personal histories of those in India s large laboring classes are brought to life as Namita Vijay Dharia discusses the aggressive environmental and ecological metamorphosis of the region in the twenty first century Urban planning and architecture are messy processes that intertwine migratory pathways corruption politics labor struggle ecological transformations and technological development Rampant construction activity produces an atmosphere of ephemerality in urban regions creating an aesthetic condition that supports industrial political economy Dharia s brilliant analysis of the sensibilities and experiences of work lends visibility to the struggle of workers in an era of growing urban inequality      El-Hi Textbooks & Serials in Print ,2003 ,2003      Quantifying Incident-induced Travel Delays on Freeways Using Traffic Sensor Data Yinhai Wang,Patikhom Cheeverunothai,Mark E. Hallenbeck,2008 Traffic congestion is a major operational problem for freeways in Washington State Recent studies have estimated that more than 50 percent of freeway congestion is caused by traffic incidents To help the Washington State Department of Transportation WSDOT identify effective countermeasures against such congestion inducing incidents a thorough understanding of travel delays caused by incidents is essential By using traffic data extracted from archived loop detector measurements and incident log data recorded by the WSDOT Incident Response IR team this research project developed a new algorithm for quantifying travel delays produced by different incident categories The algorithm applies a modified deterministic queuing theory to estimate incident induced delay by using 1 minute aggregated loop detector data Incident induced delay refers to the difference between the total delay and the recurrent travel delay at the time and location influenced by the incident The uniqueness of the delay calculation in this study is the use of a dynamic traffic volume based background profile which is considered a more accurate representation of prevailing traffic conditions According to the test results the proposed algorithm can provide good

estimates for incident induced delay and capture the evolution of freeway traffic flow during incident duration Because actual traffic data measured by loop detectors were used in this study to compute vehicle arrival and departure rates for delay calculations the estimated incident induced delay should be very close to the reality Additionally the proposed algorithm was implemented in the Advanced Roadway Incident Analyzer ARIA system ARIA is a database driven computer system that automates all the computational processes More accurate incident delay information will help WSDOT improve its understanding of congestion inducing incidents and select more effective countermeasures against incident related traffic congestion on freeways **Expressway Influence on Parallel Routes** ,1955 **Highway Research Record** ,1967
