Extending Web Services Technologies:

Extending Web Services Technologies Lawrence Cavedon, Zakaria Maamar, David Martin, Boualem Benatallah, 2006-03-30
Extending Web Services Technologies addresses the rapidly growing impact of Multi Agent Systems on web services tools and techniques. In particular, the book addresses the potential for MAS techniques to impact the difficult challenges that must be tackled for web services technology to realize its promises. The area of web services offers the multi agent community exciting research possibilities including similarities in system architectures, powerful tools, and a focus on issues such as trust and reliability. Likewise, techniques developed in the multi agent research community promise to have a strong impact on this fast growing technology. The contents contain contributions by leading international researchers and professionals from both the web services and Multi Agent Systems community. Topics include semantic web services and associated standards architectures, integrating agents and services, transactions, authorization, and service composition. **Securing Web**

Services: Practical Usage of Standards and Specifications Periorellis, Panos, 2007-10-31 This book collects a complete set of studies addressing the security and dependability challenges of Web services and the development of protocols to meet them. Encompassing a complete range of topics including specifications for message level security, transactions, and identity management, it enables libraries to provide researchers an authoritative guide to a most challenging technological topic. Provided by publisher [Enabling Technologies for Wireless E-Business](#) Weidong Kou, Yelena Yesha, 2006-12-15 Advances in

wireless technologies promise to revolutionize the way we conduct business. This book provides complete coverage of the enabling technologies needed to make wireless e business effective. These include wireless security, mobile payment, location based services, mobile data management, and RFID technologies. The authors are highly distinguished. Dr. Weidong Kou is a Chief Architect and a Senior Manager of IBM Greater China Group and a Laureate of 2004 Friendship Award of China. Dr. Yelena Yesha is an Exceptional Research Professor in the Department of Computer Science and Electrical Engineering at the University of Maryland. This book is an ideal introduction for both self study and taught e business classes or commercial training. **Emerging Web Services Technology Volume III** Walter Binder, Schahram Dustdar, 2009-11-23 This third

volume on Emerging Web Services Technologies follows the current search activities in the areas of Web Services and Service Oriented Architectures. It includes the proceedings of the 3 Workshop on Emerging Web Services Technology 2008 (WEWST 08) which was colocated with the 6 European Conference on Web Services (ECOWS 08) and took place in November 2008 in Dublin, Ireland. In addition, this volume features three papers from the ECOWS 08 business track. WEWST focuses on research contributions advancing the state of the art in Web Services technologies. The main goal of the WEWST workshop is to serve as a forum for providing early exposure and much needed feedback to grow and establish original and emerging ideas within the Web Services community. The wide variety of tools, techniques, and technological solutions presented in WEWST share one common feature: they advance the current Web Services research in

new directions by introducing new sometimes controversial ideas into the field. As such WEWST is the natural extension to the main ECOWS conference. For this edition of WEWST we accepted 6 full papers and 3 short papers. We would like to thank the paper authors for their submissions and for their contribution to the timely preparation of these proceedings as well as for their presentations and lively discussions during the workshop. At the same time we would like to thank our Program Committee for their work and for submitting the reviews on time. Last but not least we would like to thank the ECOWS conference organizers for their help organizing a successful workshop.

Agent-Based Technologies and Applications for Enterprise Interoperability Klaus Fischer, Jörg Müller, Renato Levy, 2012-03-09. The ATOP Agent Based Technologies and Applications for Enterprise Interoperability workshop series focuses on technologies that support interoperability in networked organizations on successful applications of these technologies and on lessons learned. In particular ATOP brings together research combining ideas from MDA and SOA with agent technologies. The ATOP 2009 and 2010 workshops were held at the AAMAS conferences in Budapest Hungary in May 2009 and in Toronto Canada in May 2010. The 11 papers presented here were carefully reviewed by three members of the international Program Committee and selected out of 25 contributions to the workshops. The topics covered are modeling interoperable systems semantic approaches to enterprise interoperability and interoperable business processes and business interactions. These papers are completed by an invited contribution reporting on OMG agent standardization. The main goal was to collect approaches for the application of agent technologies in these areas. Current trends in the development of agent technologies are compared with recent developments in service oriented and model driven system design with respect to their ability to solve interoperability problems.

Although the use of cloud computing platforms and applications has expanded rapidly most books on the subject focus on high level concepts. There has long been a need for a book that provides detailed guidance on how to develop secure clouds. Filling this void *Developing and Securing the Cloud* provides a comprehensive overview of cloud computing.

Service Chain Management Christos Voudouris, Gilbert Owusu, Raphael Dorne, David Lesaint, 2007-12-18. Service chain management enables service organisations to improve customer satisfaction and reduce operational costs through intelligent and optimised forecasting planning and scheduling of the service chain and its associated resources such as people networks and other assets. The area is quite broad covering field force and workforce automation network and asset planning and also aspects of customer relationship management human resources systems and enterprise resource planning. Furthermore it addresses the key challenge of how all these technologies and systems are integrated into a cohesive blueprint. In this book Christos Voudouris and his group together with experts from industry and academia present the latest innovations and

technologies used to manage the operations of a service company The viewpoints presented are based on the BT experience and on associated research and development in collaborating universities and partner companies The focus is on real world challenges and how technologies can be used to overcome practical problems in a don't just survive thrive approach The unique combination of technologies experiences and systems looked at from the different perspectives of service providers and users and combined with advice on successful benefit realisation and agile delivery of solutions makes this an indispensable read for managers and system architects in the service industry *Network World*, 2002-10-07 For more than 20 years Network World has been the premier provider of information intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations Readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce
