Longo, M. Capaccioli, G. Busarello, 2012-12-06 The morphological scheme devised by Hubble and followers to classify galaxies has proven over many decades to be quite effective in directing our quest for the fundamental parameters describing the extragalactic manifold This statement is however far more true for spirals than for ellipticals Echoing the concluding remarks in Scott Tremaine's summary talk at the Princeton meeting on Structure and Dynamics of Elliptical Galaxies the Hubble classification of spirals is useful because

many properties of spirals gas content spiral arm morphology bulge prominence etc all correlate with Hubble time By contrast almost nothing correlates with the elliptical Hubble sequence E1 to E7 During the last few years much effort has been put into the search for a more meaningful classification of ellipticals than Hubble's Concomitantly forwarded by some provocative conjectures by R Michard the classical question of whether E galaxies form a physically homogeneous family has been brushed up once more Results of these and other parallel studies look rather promising and point to suture part of the dichotomy between ellipticals and disk galaxies which had become popular in the early eighties owing to dynamical arguments At the same time it appears more and more clear that besides the usual genetic varieties of galaxies products of environmental evolution must also be contemplated in building our modern picture of the reign of galaxies The above considerations prompted us to solicit Prof Structure and Dynamics of Elliptical Galaxies Tim de Zeeuw, 2012-12-06 IAU Symposium 127 was held in Princeton on May 28-31 1986 at the Institute for Advanced Study There were 150 participants from 19 countries This was the first IAU Symposium devoted exclusively to elliptical galaxies The last decade has been a period of exceptionally rapid progress regarding our understanding of elliptical galaxies driven on the observational side by a wealth of new photometric and spectroscopic data and on the theoretical side by the recognition that ellipticals are slowly rotating triaxial systems instead of rotationally flattened bodies The 30 invited speakers reviewed all aspects of this progress its consequences and the major outstanding problems Nearly 80 poster contributions were displayed for the duration of the meeting These contained many of the most recent developments The first part of these Proceedings contains the written versions of the invited reviews and the summary in the order of their presentation The accompanying discussions are based on the written versions of questions and answers as handed in by the participants The second part of this book is devoted to the poster contributions They have been grouped in a thematic order proceeding from morphology to theory Indices of objects subjects and names are provided Unfortunately none of the invited participants from the USSR were able to attend the Symposium The Proceedings include the written versions of the planned contributions by Popov and Polyachenko

Transactions of the International Astronomical Union: Reports on Astronomy C. de Jager, 2012-12-06 This volume contains the fifteenth tri-annual reports of the Presidents of the forty Commissions of the International Astronomical Union it refers to the progress in our discipline during the three years 1970-1971 and 1972 As compared to earlier volumes a gradual change in character is unmistakable The ever increasing flow of publications combined with the obvious necessity to keep the Reports at a reasonable size and price level has gradually forced the Commission Presidents to be more selective than before in drafting their Reports I have certainly stimulated them into that direction in order that Reports like these be valuable and lasting it seems imperative that the individual contributions have the character of a critical overall review where a fairly complete summary is given of the major developments and discoveries of the past three years and in which the broad developments and new trends be clearly outlined while at the same time essential problems for future research are identified

With respect to the latter item I have suggested the Commission Presidents to add to their reports a brief section on scientific priorities for future research in the field of their Commissions In order to save space I have suggested to Commission Presidents that references to published papers are given on the basis of their number in the published issues of Astronomy and Astrophysics Abstracts For instance the indication 06 078 019 or AAA 06 078 The Galaxies of the Local Group Sidney Bergh,2000-05-15 The Local Group is a small cluster of galaxies that includes the Milky Way At least half of all galaxies in the Universe are thought to belong to similar groups This authoritative volume provides a comprehensive synthesis of what is known about the Local Group It begins with a summary of each member galaxy as well as those galaxies previously regarded as possible members The book examines the mass stability and evolution of the Local Group as a whole and includes many important previously unpublished results and conclusions With clarity Professor van den Bergh provides a masterful summary of all that is known about the galaxies of the Local Group and their evolution and expertly places this knowledge in the wider context of on going studies of galaxy formation and evolution the cosmic distance scale and the conditions in the early Universe *An Atlas of Local Group Galaxies* Paul W. Hodge,Brooke P. Skelton,Joy Ashizawa,2006-04-18 This Atlas provides a complete set of images of Local Group Galaxies excluding the three for which identification atlases are already in print and shows the most important objects including many thousands of individual stars and interstellar objects It is unique in its coverage and format and provides a source of these fundamental data that will be used for many years Researchers students and even amateur astronomers will be able to use the Atlas to identify and study the various components of the nearly 30 important galaxies covered by the Atlas The objects identified on the more than 200 charts include variable stars globular star clusters open star clusters stellar associations emission regions supernova remnants planetary nebulae and dust clouds Each galaxy is accompanied by an extensive bibliography *Science* ,

Katgert-Merkelijn,2012-12-06 The astronomer Jan Hendrik Oort 1900 1992 left behind an extensive collection of notes and correspondence both on his research and on matters that concerned him in a variety of official functions Upon Oort's death the collection was augmented by more personal papers letters journals and diaries The resulting collection forms a rich source of information on many aspects of twentieth century astronomy in which Oort played such an important role The scientific and personal material covers the entire span of time from Oort's early youth until his death To make these papers accessible to a wide circle of users the collection has now been catalogued and described the result is presented in this volume A name index and a subject index have been added to facilitate access The inventory is accompanied by a short biographical sketch and a number of photographs mostly relating to Oort's career as a scientist The original papers themselves are archived in the Leiden University Library Subject Guide to Books in Print ,1983 *Radio Galaxies* A.
