Hidden Assets Charles Ehin, 2006-07-06 Based on his diverse personal experiences and two decades of interdisciplinary research Dr Ehin unveils the mysteries and shows the practicality of tapping into the ever evolving yet extraordinarily powerful informal networks present in all social groups What this book reveals is the extraordinarily dynamic and tight linkage between three hidden organizational success factors responsible for most work accomplished in both for profit and nonprofit ventures especially in the development of new innovations The book shows why in a knowledge economy it is essential to design organizations that facilitate the fundamental collaborative and creative qualities of human nature rather than unconsciously suppressing them In doing so it is made obvious why most mergers and change efforts fail and the reasons why an average employee only works at two thirds of his her capacity This work clearly demonstrates how smart institutions can harness rather than manage these invisible emergent forces and in the process avoid the dismal record of past organizational transformation initiatives Hidden Assets is a must read not only for top executives knowledge professionals and organizational scholars but for everyone associated with private public or voluntary social institutions

Geertz, 2017-08-10 Written by leading theorists and empirical researchers this book presents new ways of addressing the old question Why did religion first emerge and then continue to evolve in all human societies The authors of the book each with a different background across the social sciences and humanities assimilate conceptual leads and empirical findings from anthropology evolutionary biology evolutionary sociology neurology primate behavioral studies explanations of human interaction and group dynamics and a wide range of religious scholarship to construct a deeper and more powerful explanation of the origins and subsequent evolutionary development of religions than can currently be found in what is now

vast literature While explaining religion has been a central question in many disciplines for a long time this book draws upon a much wider array of literature to develop a robust and cross disciplinary analysis of religion The book remains true to its subtitle by emphasizing an array of both biological and sociocultural forms of selection dynamics that are fundamental to explaining religion as a universal institution in human societies In addition to Darwinian selection which can explain the biology and neurology of religion the book outlines a set of four additional types of sociocultural natural selection that can fill out the explanation of why religion first emerged as an institutional system in human societies and why it has continued to evolve over the last 300 000 years of societal evolution These sociocultural forms of natural selection are labeled by the names of the early sociologists who first emphasized them and they can be seen as a necessary supplement to the type of natural selection theorized by Charles Darwin Explanations of religion that remain in the shadow cast by Darwin s great insights will it is argued remain narrow and incomplete when explaining a robust sociocultural phenomenon like religion
