- Given functions $f(n)$ and $g(n)$, we say that $f(n)$ is $O(g(n))$ if there are positive constants c and n_0 such that

$$f(n) \leq cg(n) \text{ for } n \geq n_0$$

- Example: $2n + 10$ is $O(n)$
 - $2n + 10 \leq cn$
 - $10 \leq cn - 2n$
 - $10/(c - 2) \leq n$
 - $10 \leq n$ (if c is 3)
 - Pick $c = 3$ and $n_0 = 10$

Semidistributive Modules and Rings A.A. Tuganbaev, 2012-12-06 A module M is called distributive if the lattice $\text{Lat } M$ of all its submodules is distributive i.e. $F \cap (G + H) = (F \cap G) + (F \cap H)$ for all submodules F, G and H of the module M A module M is called uniserial if all its submodules are comparable with respect to inclusion i.e. the lattice $\text{Lat } M$ is a chain Any direct sum of distributive resp uniserial modules is called a semidistributive resp serial module The class of distributive resp semidistributive modules properly contains the class of all uniserial resp serial modules In particular all simple resp semisimple modules are distributive resp semidistributive All strongly regular rings for example all factor rings of direct products of division rings and all commutative regular rings are distributive all valuation rings in division rings and all commutative Dedekind rings e.g. rings of integral algebraic numbers or commutative principal ideal rings are distributive A module is called a Bezout module or a locally cyclic module if every finitely generated submodule is cyclic If all maximal right ideals of a ring A are ideals e.g. if A is commutative then all Bezout A modules are distributive

System Stephen M. Highstein, Richard R. Fay, 2006-04-18 The Springer Handbook of Auditory Research presents a series of comprehensive and synthetic reviews of the fundamental topics in modern auditory research. The volumes are aimed at all individuals with interests in hearing research including advanced graduate students, postdoctoral researchers, and clinical investigators. The volumes are intended to introduce new investigators to important aspects of hearing science and to help established investigators to better understand the fundamental theories and data in fields of hearing that they may not normally follow closely. Each volume is intended to present a particular topic comprehensively and each chapter will serve as a synthetic overview and guide to the literature. As such, the chapters present neither exhaustive data reviews nor original research that has not yet appeared in peer-reviewed journals. The volumes focus on topics that have developed a solid data and conceptual foundation rather than on those for which a literature is only beginning to develop. New research areas will be covered on a timely basis in the series as they begin to mature. Logic Programming and Nonmonotonic Reasoning

Ulrich Furbach, 1997-07-02 Development and environment problems have reached such alarming proportions that the very survival of humanity is now subject to critical and unprecedented threats. In its latest report, the German Advisory Council on Global Change (WBGU) criticizes Germany's global change research community for its lack of international orientation, its bias towards individual disciplines, and for its weaknesses in translating scientific results into a form readily accessible to policymakers. The Council identifies alternatives for restructuring the research landscape, focusing primarily on a new Syndrome Approach for global change research. By applying this tool, scientists can systematically describe and analyze the diseases afflicting the Earth System and thus elaborate response options. Image Processing for Computer Graphics Jonas Gomes, Luiz Velho, 2013-04-17 Image processing is concerned with the analysis and manipulation of images by computer. The focus of this book is to provide a thorough treatment of image processing with an emphasis on those aspects most used in computer graphics. Throughout, the authors concentrate on describing and analyzing the underlying concepts rather than on presenting algorithms or pseudocode. As befits a modern introduction to this topic, a good balance is struck between discussing the underlying mathematics of the subject and the main topics covered: signal processing, data discretization, the theory of colour, and different colour systems, operations in images: dithering and half-toning, warping and morphing, and image processing. **Recent Advances in Environmentally Compatible Polymers** J. Williams, 2001-10-26 Based on the proceedings of the eleventh international Cellucon conference held in Tsukuba, Japan, this book offers a comprehensive overview of important research undertaken into all aspects of environmentally compatible polymers. It deals with natural and synthetic polymer materials such as gels, fibres, pulp and paper, films, foams, blends, and composites, and shows how environmental compatibility such as biodegradability and recyclability can be developed by utilising natural polymers such as polysaccharides and polyphenols.
