Emergent Forms Of Life And The Anthropological Voice:

Emergent Forms of Life and the Anthropological Voice Michael M. J. Fischer, 2003 Table of contents *Theory in Social and Cultural Anthropology* R. Jon McGee, Richard L. Warms, 2013-08-28 Social and cultural anthropology and archaeology are rich subjects with deep connections in the social and physical sciences Over the past 150 years the subject matter and different theoretical perspectives have expanded so greatly that no single individual can command all of it Consequently both advanced students and professionals may be confronted with theoretical positions and names of theorists with whom they are only partially familiar if they have heard of them at all Students in particular are likely to turn to the web to find quick background information on theorists and theories However most web based information is inaccurate and or lacks depth Students and professionals need a source to provide a quick overview of a particular theory and theorist with just the basics the who what where how and why if you will In response SAGE Reference plans to publish the two volume *Theory in Social and Cultural Anthropology An Encyclopedia* Features Benefits Two volumes containing approximately 335 signed entries provide users with the most authoritative and thorough reference resource available on anthropology theory both in terms of breadth and depth of coverage To ease navigation between and among related entries a Reader's Guide groups entries thematically and each entry is followed by Cross References In the electronic version the Reader's Guide combines with the Cross References and a detailed Index to provide robust search and browse capabilities An appendix with a Chronology of Anthropology Theory allows students to easily chart directions and trends in thought and theory from early times to the present Suggestions for Further Reading at the end of each entry and a Master Bibliography at the end guide readers to sources for more detailed research and discussion **African Futures** Brian Goldstone, Juan Obarrio, 2017-01-31 Civil wars corporate exploitation AIDS and Ebola but also democracy burgeoning cities and unprecedented communication and mobility the future of Africa has never been more uncertain Indeed that future is one of the most complex issues in contemporary anthropology as evidenced by the incredible wealth of ideas offered in this landmark volume A consortium comprised of some of the most important scholars of Africa today this book surveys an intellectual landscape of opposed perspectives in order to think within the contradictions that characterize this central question Where is Africa headed The experts in this book address Africa's future as it is embedded within various social and cultural forms emerging on the continent today the reconfiguration of the urban the efflorescence of signs and wonders and gospels of prosperity the assorted techniques of legality and illegality lotteries and Ponzi schemes apocalyptic visions a yearning for exile and many other phenomena Bringing together social political religious and economic viewpoints the book reveals not one but multiple prospects for the future of Africa In doing so it offers a pathbreaking model of pluralistic and open ended thinking and a powerful tool for addressing the vexing uncertainties that underlie so many futures around the world *Dreamscapes of Modernity* Sheila Jasanoff, Sang-hyun Kim, 2015-09-02 *Dreamscapes of Modernity* offers the first book length treatment of

sociotechnical imaginaries a concept originated by Sheila Jasanoff and developed in close collaboration with Sang Hyun Kim to describe how visions of scientific and technological progress carry with them implicit ideas about public purposes collective futures and the common good The book presents a mix of case studies including nuclear power in Austria Chinese rice biotechnology Korean stem cell research the Indonesian Internet US bioethics global health and more to illustrate how the concept of sociotechnical imaginaries can lead to more sophisticated understandings of the national and transnational politics of science and technology A theoretical introduction sets the stage for the contributors wide ranging analyses and a conclusion gathers and synthesizes their collective findings The book marks a major theoretical advance for a concept that has been rapidly taken up across the social sciences and promises to become central to scholarship in science and technology studies

Will to Live João Biehl, 2021-10-12 Will to Live tells how Brazil against all odds became the first developing country to universalize access to life saving AIDS therapies a breakthrough made possible by an unexpected alliance of activists government reformers development agencies and the pharmaceutical industry But anthropologist João Biehl also tells why this policy hailed as a model worldwide has been so difficult to implement among poor Brazilians with HIV AIDS who are often stigmatized as noncompliant or untreatable becoming invisible to the public More broadly Biehl examines the political economy of pharmaceuticals that lies behind large scale treatment rollouts revealing the possibilities and inequalities that come with a magic bullet approach to health care By moving back and forth between the institutions shaping the Brazilian response to AIDS and the people affected by the disease Biehl has created a book of unusual vividness scope and detail At the core of Will to Live is a group of AIDS patients unemployed homeless involved with prostitution and drugs that established a makeshift health service Biehl chronicled the personal lives of these people for over ten years and Torben Eskerod represents them here in more than one hundred stark photographs Ethnography social medicine and art merge in this unique book illuminating the care and agency needed to extend life amid perennial violence Full of lessons for the future Will to Live promises to have a lasting influence in the social sciences and in the theory and practice of global public health

Barcoding Nature Claire Waterton, 2017-07-05 DNA Barcoding has been promoted since 2003 as a new fast digital genomics based means of identifying natural species based on the idea that a small standard fragment of any organism's genome a so called micro genome can faithfully identify and help to classify every species on the planet The fear that species are becoming extinct before they have ever been known fuels barcoders and the speed scope economy and user friendliness claimed for DNA barcoding as part of the larger ferment around the genomics revolution has also encouraged promises that it could inspire humanity to reverse its biodiversity destructive habits This book is based on six years of ethnographic research on changing practices in the identification and classification of natural species Informed both by Science and Technology Studies STS and the anthropology of science the authors analyse DNA barcoding in the context of a sense of crisis concerning global biodiversity loss but also the felt inadequacy of taxonomic science to address such loss The authors

chart the specific changes that this innovation is propelling in the collecting organizing analyzing and archiving of biological specimens and biodiversity data As they do so they highlight the many questions ambiguities and contradictions that accompany the quest to create a genomics based environmental technoscience dedicated to biodiversity protection They ask what it might mean to recognise ambiguity contradiction and excess more publicly as a constitutive part of this and other genomic technosciences Barcoding Nature will be of interest to students and scholars of sociology of science science and technology studies politics of the environment genomics and post genomics philosophy and history of biology and the anthropology of science

Sounding the Limits of Life Stefan Helmreich, 2015-10-27 What is life What is water What is sound In *Sounding the Limits of Life* anthropologist Stefan Helmreich investigates how contemporary scientists biologists oceanographers and audio engineers are redefining these crucial concepts Life water and sound are phenomena at once empirical and abstract material and formal scientific and social In the age of synthetic biology rising sea levels and new technologies of listening these phenomena stretch toward their conceptual snapping points breaching the boundaries between the natural cultural and virtual Through examinations of the computational life sciences marine biology astrobiology acoustics and more Helmreich follows scientists to the limits of these categories Along the way he offers critical accounts of such other than human entities as digital life forms microbes coral reefs whales seawater extraterrestrials tsunamis seashells and bionic cochlea He develops a new notion of sounding as investigating fathoming listening to describe the form of inquiry appropriate for tracking meanings and practices of the biological aquatic and sonic in a time of global change and climate crisis *Sounding the Limits of Life* shows that life water and sound no longer mean what they once did and that what count as their essential natures are under dynamic revision

How to Read Ethnography Paloma Gay y Blasco, Huon Wardle, 2019-04-08 *How to Read Ethnography* is an essential guide to approaching anthropological texts It helps students to cultivate the skills they need to critically examine and understand how ethnographies are built up as well as to think anthropologically and develop an anthropological imagination of their own The authors reveal how ethnographically informed anthropology plays a distinctive and valuable role in comprehending the complexity of the world we live in This fully revised second edition includes fresh excerpts from key texts for analysis and comparison along with lucid explanations In addition to concerns with argument authority and the relationship between theory and data the book engages with the purpose value and accountability of ethnographic texts as well as with their reception and usage A brand new chapter looks at the kinds of collaboration between informants consultants and anthropologists that go into the making of ethnographic writing

Recoding Life Sakari Tamminen, Eric Deibel, 2018-07-11 This book addresses the unprecedented convergence between the digital and the corporeal in the life sciences and turns to Foucault's biopolitics in order to understand how life is being turned into a technological object It examines a wide range of bioscientific knowledge practices that allow life to be known through codes that can be shared copied owned claimed and managed and optimised remade through codes based on

standard language and biotech engineering visions The book s approach is captured in the title which refers to the biopolitical The authors argue that through discussions of political theories of sovereignty and related geopolitical conceptions of nature and society we can understand how crucially important it is that life is constantly unsettling and disrupting the established and familiar ordering of the material world and the related ways of thinking and acting politically The biopolitical dynamics involved are conceptualised as the metacode of life which refers to the shifting configurations of living materiality and the merging of conventional boundaries between the natural and artificial the living and non living The result is a globalising world in which the need for an alternative has become a core part of its political and legal instability and the authors identify a number of possible alternative platforms to understand life and the living as framed by the metacodes of life This book will appeal to scholars of science and technology studies as well as scholars of the sociology philosophy and anthropology of science who are seeking to understand social and technical heterogeneity as a characteristic of the life sciences **New Organs Within Us** Aslıhan Sanal,2011-07 An ethnographic analysis of organ transplantation in Turkey based on the stories of kidney transplant patients and physicians in Istanbul
