Emerging Cognitive Abilities In Early Infancy:

Emerging Cognitive Abilities in Early infancy Francisco Lacerda, Claes von Hofsten, Mikael Heimann, 2000-11-01 Written by a group of developmental scientists this book debates cognitive achievements in early infancy from a multidisciplinary perspective The editors combine knowledge from different areas of infant development research to present an integrated view of the cognitive abilities emerging in early infancy The chapters are arranged in a sequence that best conveys to the reader the line of reasoning that emerged during the development of this book The book opens with chapters dealing with fundamental and general aspects of cognitive development sweeps through the specific theme of language acquisition and closes by returning to general questions concerning different representation modalities

Regression Periods in Human infancy Mikael Heimann, Frans X. Plooij, 2003-10-17 Regression periods play a central role in the psychological development of the human baby Studies of infants have identified 10 periods of regression or a return to a high frequency of mother infant contact within the first 20 months of life These periods of emotional insecurity in the child signal forthcoming periods of developmental advance and the emergence of an array of new skills as a consequence of parent infant conflict over body contact and the renegotiation of old privileges Although the basic idea in this book is an old one the authors believe that regression periods deserve further study and have identified four questions of central importance today Can the phenomenon of regression periods as found by Dutch researchers in 1992 be replicated in other countries and cultures What environmental conditions have an effect on these regression periods and how Are there physical conditions in infants that show a non linear distribution over age similar to regression periods Have brain changes been detected since the review of Fischer Rose 1994 at other ages than the six reported by them and if yes how do these relate to the ages at which regression periods are found Forming the core of this book the replication studies performed in Sweden Spain and England provide support that regression periods are a reliable phenomenon and should be dealt with accordingly whenever developmental processes in infancy are discussed

New Frontiers in Mirror Neurons Research Pier Francesco Ferrari, Giacomo Rizzolatti, 2015-10-08 The discovery of mirror neurons caused a revolution in neuroscience and psychology Nevertheless because of their profound impact within life sciences mirror neuron are still the subject of numerous debates concerning their origins and their functions With more than 20 years of research in this area it is timely to synthesise the expanding literature on this topic New frontiers in Mirror Neurons provides a comprehensive overview of the latest advances in mirror neurons research accessible both to experts and to non experts In the book leading scholars draw on the latest research to examine methodological approaches theoretical implications and the latest findings on mirror neurons research A broad range of topics are covered within the book basic findings and new concepts in action perception theory functional properties and evolution development and clinical implications In particular the last two sections of the book outline the importance of the plasticity and development of the mirror neuron system This knowledge will be key in future research for helping us

understand possible disorders associated with impairments in the mirror neurons system as well as in helping us design new therapeutic tools for interventions within the field of neurodevelopmental disorders and in neurorehabilitation New Frontiers in Mirror Neurons is an exciting new work for neuroscientists psychologists and philosophers of mind

Imitation from Infancy Through Early Childhood Mikael Heimann, 2022-08-30 This book summarizes more than four decades of research on imitation in infancy and its relation to early learning and sociocognitive development in typically and atypically developing children The studies were carried out in a Scandinavian context and thus provide important cultural validation of the central developmental processes The book is divided into three parts Part one focuses on the social and cognitive aspects of imitation discussing links to early parent infant interaction and developmental meaning It addresses evidence for an imitative capacity at birth for typical and atypical infants Also covered are early individual differences in imitation the role of imitation as a social and cognitive learning mechanism in early development and possible links between imitation and temperament Part two presents unique longitudinal studies on early memory development using deferred

imitation as the key method It discusses the biological basis of memory and explores the idea that deferred imitation is an indicator of an infant's ability to understand intentions Part three focuses on imitation in young children with autism and with Down syndrome It examines the role of imitation as a deficit as well as a vehicle for change when used interactively in early interventions for children with autism Imitation from Infancy Through Early Childhood is an essential resource for researchers professors and graduate students as well as clinicians and other professionals in developmental psychology cognitive development psycholinguistics child psychiatry and developmental neuroscience **Research Manual in Child Development** Lorraine Nadelman, 2003-10-03 This unique hands on lab manual in child development provides great ideas and resources for teaching research courses involving child subjects It includes projects in psychomotor perceptual cognitive and social development Projects are preceded by background essays on the history of that topic related research theoretical issues and controversies Each project has hypotheses to test detailed procedures to follow all stimuli individual and group data sheets empty tables suggested statistics discussion questions and an updated bibliography Special features of this second edition The introductory text portion details research considerations including an introduction to psychological research sections on developmental research children as subjects and general experimental research procedures The popular Infant Observation project has the student visit homes with babies for a semester and provides practice in observational data collection reliability assessment and report writing The cognitive development section includes two new subfields Theory of Mind and Language Children's Interpretation of the Word Big in addition to classic studies of Piaget's spatial perspective taking and attention and memory The final chapter describes a suggested neuropsychological project The socialized child section includes a new study on sibling relationships as seen by the older or younger sibling in addition to the earlier projects on self esteem sex identity and cooperation competition The final section describes a suggested cross cultural interview project Progress in Infancy Research Jeffrey W. Fagen, Harlene Hayne, 2002-03 This is the second volume in the series on Infancy Research which presents syntheses of theory on infants development both human and animal For researchers in developmental psychology neuroscience *Learning and the Infant Mind* Amanda Woodward, Amy Needham, 2009 When asking how cognition comes to take its mature form learning seems to be an obvious factor to consider However until quite recently there has been very little contact between investigations of how infants learn and what infants know The chapters in this book document for the first time the insights that emerge when researchers who come from diverse domains and use different approaches make a genuine attempt to bridge this divide Child Development Laura Berk, 2015-05-20 Child Development **Building Object Categories in Developmental Time** Lisa Gershkoff-Stowe, David H. Rakison, 2005-05-06 This book covers a broad range of current research topics in category development Its aim is to understand the perceptual and cognitive mechanisms that underlie category formation and how they change in developmental time The chapters in this book are **Ritual, Play, and Belief in Evolution and Early Human Societies** Colin Renfrew, Iain Morley, Michael

Boyd,2018 This book presents unique new insights into the development of human ritual and society through our heritage of play and performance **Handbook of Self-regulatory Processes in Development** Karen Caplovitz Barrett,2013 Section 1 Development of emotion regulation and self regulation section editor Karen Caplovitz Barrett section 2 Development of self regulation physiological and brain processes section editor Nathan A Fox section 3 Development of self regulation and mastery motivation section editor George A Morgan section 4 Self regulation in atypical development section editors Deborah J Fidler and Lisa A Daunhauer **Connectionist Models of Development** Philip T. Quinlan,2004-03 Connectionist Models of Development is an edited collection of essays on the current work concerning connectionist or neural network models of human development The brain comprises millions of nerve cells that share myriad connections and this book looks at how human development in these systems is typically characterised as adaptive changes to the strengths of these connections The traditional accounts of connectionist learning based on adaptive changes to weighted connections are explored alongside the dynamic accounts in which networks generate their own structures as learning proceeds Unlike most connectionist accounts of psychological processes which deal with the fully mature system this text brings to the fore a discussion of developmental processes To investigate human cognitive and perceptual development connectionist models of learning and representation are adopted alongside various aspects of language and knowledge acquisition There are sections on artificial intelligence and how computer programs have been designed to mimic the development processes as well as chapters which describe what is currently known about how real brains develop This book is a much needed addition to the existing literature on connectionist development as it includes up to date examples of research on current controversies in the field as well as new features such as genetic connectionism and biological theories of the brain It will be invaluable to academic researchers post graduates and undergraduates in developmental psychology and those researching connectionist neural networks as well as those in related fields such as psycholinguistics Emotional Development Jacqueline Nadel,Darwin Muir,2005 A group of scientists consider emotional development from foetal life onwards The text includes views from neuroscience primatology robotics psychopathology and prenatal development **The Imitative Mind** Andrew N. Meltzoff,Wolfgang Prinz,2002-04-18 Imitation guides the behaviour of a range of species Scientific advances in the study of imitation at multiple levels from neurons to behaviour have far reaching implications for cognitive science neuroscience and evolutionary and developmental psychology This volume first published in 2002 provides a summary of the research on imitation in both Europe and America including work on infants adults and nonhuman primates with speculations about robotics A special feature of the book is that it provides a concrete instance of the links between developmental psychology neuroscience and cognitive science It showcases how an interdisciplinary approach to imitation can illuminate long standing problems in the brain sciences including consciousness self perception action coding theory of mind and intersubjectivity The book addresses what it means to be human and how we get that way **Infants' Sense of People** Maria Legerstee,2005-12-08 Infants

Sense of People focusses on infants during their first year of life exploring how they begin to think about other people their feelings emotions and intentions and how they become aware of these aspects of their own development Drawing on a broad range of research and developmental theory Maria Legerstee takes the view that infants have an innate sense of people at birth which is activated through sympathetic emotions She questions the idea that infants use physical parameters such as contingencies or motion to distinguish people from objects and rejects the assumption that infants are mechanical creatures before they become psychological ones She argues persuasively that before infants learn to speak interactions with others are possible because infants have a primitive pre linguistic theory of mind This accessible book provides a valuable synthesis of current thinking on early social and cognitive development and the origins of theory of mind

The Development of Children Michael Cole, Sheila R. Cole, Cynthia Lightfoot, 2005 Development is best understood as a fusion of biological social and psychological processes interacting in the unique medium of human culture In this text the authors have tried to show not only the role of each of these factors considered separately but also how they interact in diverse cultural contexts to create whole unique human beings Pref

The Blackwell Companion to Consciousness Max Velmans, Susan Schneider, 2008-04-15 With fifty five peer reviewed chapters written by the leading authors in the field The Blackwell Companion to Consciousness is the most extensive and comprehensive survey of the study of consciousness available today Provides a variety of philosophical and scientific perspectives that create a breadth of understanding of the topic Topics include the origins and extent of consciousness different consciousness experiences such as meditation and drug induced states and the neuroscience of consciousness

The Acquisition of Syntactic Structure Misha Becker, 2014-04-03 This book explains how children s early ability to distinguish between animate and inanimate nouns helps them acquire complex sentence structure The theoretical claims of the book expand the well known hypotheses of syntactic and semantic bootstrapping resulting in greater coverage of the core principles of language acquisition
