Extending the Educational Ladder William Mark Zumeta,1985 **Enhancing the Postdoctoral Experience for Scientists and Engineers** Institute of Medicine,National Academy of Engineering,National Academy of Sciences,Committee on Science, Engineering, and Public Policy,2000-09-08 The concept of postdoctoral training came to science and engineering about a century ago Since the 1960s the performance of research in the United States has increasingly relied on these recent PhDs who work on a full time but on a temporary basis to gain additional research experience in preparation for a professional research career Such experiences are increasingly seen as central to careers in research but for many the postdoctoral experience falls short of expectations Some postdocs indicate that they have not received the recognition standing or compensation that is commensurate with their experience and skills Is this the case If so how can the postdoctoral experience be enhanced for the over 40 000 individuals who hold these positions at university government and industry laboratories This new book offers its assessment of the postdoctoral experience and provides principles action points and recommendations for enhancing that experience Extending the Educational Ladder ,1984 **Women in Science and Engineering: Increasing Their Numbers in the 1990s** National Research Council,Policy and Global Affairs,Office of Scientific and Engineering Personnel,Committee on Women in Science and Engineering,1991-02-01 From time to time it is necessary to alert the research and policy communities to opportunities for action in areas of mutual concern One such area is the participation and utilization of women in science and engineering in the United States This book explores the underparticipation of women in these fields and presents a strategic plan to bring qualified women into such careers as researchers teachers and practitioners of science and engineering **The Cost effectiveness of digital subtraction angiography in the diagnosis of cerebrovascular disease** ,1985 *Higher Education: Handbook of Theory and Research* Michael B. Paulsen,2015-01-12 Published annually since 1985 the Handbook series provides a compendium of thorough and integrative literature reviews on a diverse array of topics of interest to the higher education scholarly and policy communities Each chapter provides a comprehensive review of research findings on a selected topic critiques the research literature in terms of its conceptual and methodological rigor and sets forth an agenda for future research intended to advance knowledge on the chosen topic The Handbook focuses on a comprehensive set of central areas of study in higher education that encompasses the salient dimensions of scholarly and policy inquiries undertaken in the international higher education community Each annual volume contains chapters on such diverse topics as research on college students and faculty organization and administration curriculum and instruction policy diversity issues economics and finance history and philosophy community colleges advances in research methodology and more The series is fortunate to have attracted annual contributions from distinguished scholars throughout the world Demographic Trends and the Scientific and Engineering Work Force ,1987 **The Economics of American Universities** Stephen A. Hoenack,Eileen L. Collins,1990-06-01 This

book discusses the adjustment of universities to the changing financial environment Its authors analyze the relationship between higher education inputs and outputs assess the available information about the determinants of university costs survey the influence of market conditions and pricing strategies on students demands for attendance at institutions of higher education summarize research on the objectives for institutions of higher education held by different participants and funders analyze how universities determine their priorities and relative funding for different activities and disciplines and explore the economics of universities research functions In addition the book addresses three questions regarding the external fiscal environment facing American universities What are the recent and emerging changes in the key economic variables affecting these institutions What mechanisms have universities used in the past to cope with tighter financial constraints What are the implications for university research activities as these institutions adjust to their fiscal constraints

New Languages and Landscapes of Higher Education Peter Scott,Jim Gallacher,Gareth Parry,2017 The landscapes of higher education have been changing rapidly with enormous growths in participation rates in many countries across the world and major developments and changes within institutions But the languages that we need to conceptualise and understand these changes have not been keeping pace The central argument in this book is that new ways of thinking about higher education the new languages of its title are needed to understand the role of universities and colleges in contemporary society and culture and the global economy new landscapes Over reliance on existing conceptualisations of higher education has made it difficult to understand fully the nature of 21st century higher education It may also have encouraged a view that there is no alternative to the development of more marketized forms of higher education The analysis offered suggests that the future is much more open It argues that familiar categories normally accepted as givens are actually more fluid Systems of higher education whether expressed through direct public funding or through regulatory regimes are being eroded Institutions often assumed to be to be given enhanced agency by more corporate forms of management and governance are no longer powerful actors if they ever were Research often corralled by assessment and management systems is becoming more diffuse and distributed Learning supposedly more focused on skill outcomes and employability retains a more broadly educative function The publicness of higher education has not disappeared as public funding has diminished but taken on new forms With contributions from leading figures drawn from a wide range of countries this book provides an authoritative analysis of many of the major issues which dominate discussion with respect to policy practice and research in the field of higher education and it can expect to become a major source book for all who are interested in the development of higher education in the 21st Century Contingent Faculty and the Remaking of Higher Education Eric Fure-Slocum,Claire Goldstene,2024-01-23 An educational crisis from its origins to present day experiences In the United States today almost three quarters of the people teaching in two and four year colleges and universities work as contingent faculty They share the hardships endemic in the gig economy lack of job security and health care professional

disrespect and poverty wages that require them to juggle multiple jobs This collection draws on a wide range of perspectives to examine the realities of the contingent faculty system through the lens of labor history Essayists investigate structural changes that have caused the use of contingent faculty to skyrocket and illuminate how precarity shapes day to day experiences in the academic workplace Other essays delve into the ways contingent faculty engage in collective action and other means to resist austerity measures improve their working conditions and instigate reforms in higher education By challenging contingency this volume issues a clear call to reclaim higher education s public purpose Interdisciplinary in approach and multifaceted in perspective *Contingent Faculty and the Remaking of Higher Education* surveys the adjunct system and its costs Contributors Gwendolyn Alker Diane Angell Joe Berry Sue Doe Eric Fure Slocum Claire Goldstene Trevor Griffey Erin Hatton William A Herbert Elizabeth Hohl Miguel Ju rez Aimee Loiselle Maria C Maisto Anne McLeer Steven Parfitt Jiyeon Park Claire Raymond Gary Rhoades Jeff Schuhrke Elizabeth Tandy Shermer Steven Shulman Joseph van der Naald Anne Wiegard Naomi R Williams and Helena Worthen

Innovation Policy in the Knowledge-Based Economy

M.P. Feldman, Albert N. Link, 2012-12-06 Scholars in the science and technology field have not collectively questioned much less proposed an agenda for policy makers Now is an appropriate time for such an undertaking First there is a growing belief that the U S national research and development system like that of many industrial nations is changing due to global competitive pressures and advancements in information technology and electronic commerce Second industry s R D relationship with the academic research community is changing not only because of the global competition but also because of alterations in the level of government support of fundamental research As a result policy makers will need to rethink their approaches to science and technology issues This volume is a collection of essays by scholars about innovative policy in the knowledge based economy By knowledge based economy we mean one for which economic growth is based on the creation distribution and use of technology As such innovation policy in such an economy must enhance the creation distribution and use of knowledge that leads to the creation distribution and use of technology This volume considers elements of an innovation policy innovation policy and academic research innovation policy in electronic commerce and innovation policy and globalization issues
