Ehrlich, David S. Dobkin, Darryl Wheye, 1992-03-01 As the human population skyrockets and the toxic impact of human society spreads the natural habitats of birds degrade and diminish and the bird populations decline Two hundred years ago when the United States and Canada were home to less than 5 million people they were also home to some 650 species of birds Today more than 280 million people live there and 33 bird species have already been driven to extinction and well over 150 are in danger of extinction in all or parts of their range This book organized and written by the authors of The Birder's Handbook and enriched by 191 strikingly beautiful color paintings illustrating all of the birds treated is the first concise authoritative review of the status of the birds currently imperiled in the United States and Canada those that are federally listed as Endangered or Threatened and those that are listed by the National Audubon Society as suffering local or regional or Widespread decline It also treats the birds that have been driven to extinction in the past two centuries since the stories of their somber fates can help us learn how to save the other birds that are in jeopardy Because birdwatchers and others are showing increased interest in the tropical birds that survive in Hawaii and Puerto Rico the book includes separate sections on the imperiled and extinct birds of those areas Hawaii is of special importance because it has seen so many extinctions just in the years since Cook's arrival 23 species and subspecies it provides a laboratory for studying the impact of civilization on birds in the wild The individual texts written in clear non technical language cover requirements for successful nesting and feeding worldwide and North American breeding range wintering range and imperiled portions of range current population estimates for Threatened and Endangered birds behavioral And other factors pertinent to conservation former and or current threats associated with decline current status of imperilment federally

funded recovery plans and the date of last sighting in those desperate cases where extinction is imminent or already a fact In the last century coal miners took canaries into the mines reasoning that if poisonous gases were present the birds would give warning by succumbing first Now birds are serving as miners canaries once Again In the language of ecology they are good indicator species warning us that too many people unbridled consumption of wildlands and other natural resources faulty technologies and irresponsible disposal of chemical and other wastes threaten not just birds but ourselves and every other living thing In our daily lives we seldom see the terrible effects of these forces but they are demonstrated every day by scientific surveys of the environment around the world *Extinction and Biogeography of Tropical Pacific Birds* David W. Winged Worlds Olga Petri,Michael Guida,2023-06-26 This edited collection explores our often surprising modes of co-inhabiting the cultural and aerial worlds of birds It focuses on our encounters with non-captive birds and the cultural geographies of feathered flight This book offers a timely contribution to the more-than-human geographies of flight space and territory The chapters support an ethics of

attention as a new basis for the conservation and cultivation of aerial habitats Contributions adopt an interdisciplinary approach to the patterns of intrusion and escape that shape our encounters with birds and unsettle our traditionally terrestrial concepts of space Each chapter focuses on a different aspect of our shared lives with birds ranging from scientific observation to the social media enabled spectacle of co habitation and spatial competition Written in a thought provoking style this book seeks to address a dearth of critical perspectives on the cultural geographies of flight and its implications for the ways in which we understand common spaces around and above us in the context of any effort at conservation

Quaternary Extinctions Paul S. Martin, Richard G. Klein, 2022-01-04 What caused the extinction of so many animals at or near the end of the Pleistocene Was it overkill by human hunters the result of a major climatic change or was it just a part of some massive evolutionary turnover Questions such as these have plagued scientists for over one hundred years and are still being heatedly debated today Quaternary Extinctions presents the latest and most comprehensive examination of these questions Geological Magazine May be regarded as a kind of standard encyclopedia for Pleistocene vertebrate paleontology for years to come American Scientist Should be read by paleobiologists biologists wildlife managers ecologists archeologists and anyone concerned about the ongoing extinction of plants and animals Science Uncommonly readable and varied for watchers of paleontology and the rise of humankind Scientific American Represents a quantum leap in our knowledge of Pleistocene and Holocene palaeobiology Many volumes on our bookshelves are destined to gather dust rather than attention But not this one Nature Two strong impressions prevail when first looking into this epic compendium One is the judicious balance of views that range over the whole continuum between monocausal cultural or environmental explanations The second is that both the data base and theoretical sophistication of the protagonists in the debate have improved by a quantum leap since 1967 American Anthropologist *Bird Lore* ,1917
