Industrial Noise (581) ,1981 **Feature Weighting for Clustering** Renato Cordeiro de Amorim,2012 K Means is arguably the most popular clustering algorithm this is why it is of great interest to tackle its shortcomings The drawback in the heart of this project is that this algorithm gives the same level of relevance to all the features in a dataset This can have disastrous consequences when the features are taken from a database just because they are available To address the issue of unequal relevance of the features we use a three stage extension of the generic K Means in which a third step is added to the usual two steps in a K Means iteration feature weighting update We extend the generic K Means to what we refer to as Minkowski Weighted K Means method We apply the developed approaches to problems in distinguishing between different mental tasks over high dimensional EEG data *Secure IT Systems* Leonardo Horn Iwaya, Liina Kamm, Leonardo Martucci, Tobias Pulls, 2025-01-28 This book constitutes the refereed proceedings of the 29th International Conference on Secure IT Systems NordSec 2024 held in Karlstad Sweden during November 6 7 2024 The 25 full papers presented in this book were carefully reviewed and selected from 59 submissions They focus on topics such as Authentication Cryptography Cyber Physical Systems Cybersecurity and Policy LLMs for Security Formal Verification Mobile and IoT Network Security and Privacy **Advances in Neural Information Processing Systems 9** Michael C. Mozer, Michael I. Jordan, Thomas Petsche, 1997 The annual conference on Neural Information Processing Systems NIPS is the flagship conference on neural computation It draws preeminent academic researchers from around the world and is widely considered to be a showcase conference for new developments in network algorithms and architectures The broad range of interdisciplinary research areas represented includes neural networks and genetic algorithms cognitive science neuroscience and biology computer science AI applied mathematics physics and many branches of engineering Only about 30% of the papers submitted are accepted for presentation at NIPS so the quality is exceptionally high All of the papers presented appear in these proceedings Radar Target Detection Daniel Meyers, 2012-12-02 Radar Target Detection Handbook of Theory and Practice covers a set of graphical solutions to the detection problem designated as Meyer Plots for radar systems design A radar system's major purpose is the detection and location of an object by means of a return signal which could be either a reflection or a beacon This book is composed of four chapters Chapter 1 presents the basic radar range equation which is the basic relationship which permits the calculation of echo signal strength from measurable or known parameters of the radar transmitter antenna propagation path and target Chapter 2 provides examples for determining statistical signal detection using Meyer Plots particularly for determining detection probability and integration loss and efficiency Chapter 3 describes the application of target models to determination of detection probability Chapter 4 examines how Meyer Plots can be used to solve problems involving most any target model *Federal Register* ,1981-01-14 *Wind Energy for the Next Millennium* E. OFDM Baseband Receiver Design for Wireless Communications Tzi-Dar Chiueh, Pei-Yun Tsai, 2008-04-15 Orthogonal frequency division multiplexing OFDM access schemes are becoming more prevalent among cellular and wireless broadband systems accelerating the need for smaller more energy efficient receiver solutions Up to now the majority of OFDM texts have dealt with signal processing

aspects To address the current gap in OFDM integrated circuit IC instruction Chiueh and Tsai have produced this timely text on baseband design OFDM Baseband Receiver Design for Wireless Communications covers the gamut of OFDM technology from theories and algorithms to architectures and circuits Chiueh and Tsai give a concise yet comprehensive look at digital communications fundamentals before explaining modulation and signal processing algorithms in OFDM receivers Moreover the authors give detailed treatment of hardware issues from design methodology to physical IC implementation Closes the gap between OFDM theory and implementation Enables the reader to transfer communication receiver concepts into hardware design wireless receivers with acceptable implementation loss achieve low power designs Contains numerous figures to illustrate techniques Features concrete design examples of MC CDMA systems and cognitive radio applications Presents theoretical discussions that focus on concepts rather than mathematical derivation Provides a much needed single source of material from numerous papers Based on course materials for a class in digital communication IC design this book is ideal for advanced undergraduate or post graduate students from either VLSI design or signal processing backgrounds New and experienced engineers in industry working on algorithms or hardware for wireless communications devices will also find this book to be a key reference

Quantum Optics IV John D. Harvey, Daniel F. Walls, 2012-12-06 This volume contains notes based on the lectures delivered at the fourth New Zealand Symposium in Laser Physics held at the University of Waikato Hamilton February 10 15 1986 At this meeting about 80 physicists working in many parts of the world met to discuss topics of current interest in contemporary laser physics and quantum optics These symposia which have been held triennially since 1977 have evolved into an important meeting ground for experimentalists and theoreticians working in a very rapidly developing field As the format has evolved the number of participants including the number from overseas has grown steadily and this year a poster session was included for the first time enabling a far greater range of topics to be discussed than was possible in the limited lecture time available At this meeting the major interest of the participants concerned the theoretical investigation of squeezed states of the radiation field and the very recently reported experimental observations of such states Other related areas of work reported here include bistability and chaotic behaviour of optical systems the quantum theory of measurements optical tests of general relativity and the current technological limitations governing the stabilization of lasers The editors would like to thank the participants for providing detailed notes for publication shortly after the meeting and the various organisations that have provided financial support

Performance of Detection and Communication Systems Albert H. Nuttall, 1980 **National Safety News**, 1927 **NASA Technical Note**, 1976 **Encyclopaedia of Occupational Health and Safety: Hazards** Jeanne Mager Stellman, 1998 **The Role of Working Memory and Executive Function in Communication under Adverse Conditions** Mary Rudner, Carine Signoret, 2016-06-20 Communication is vital for social participation However communication often takes place under suboptimal conditions This makes communication harder and less reliable leading at worst to social isolation In order to

promote participation it is necessary to understand the mechanisms underlying communication in different situations Human communication is often speech based either oral or written but may also involve gesture either accompanying speech or in the form of sign language For communication to be achieved a signal generated by one person has to be perceived by another person attended to comprehended and responded to This process may be hindered by adverse conditions including factors that may be internal to the sender e g incomplete or idiosyncratic language production occur during transmission e g background noise or signal processing or be internal to the receiver e g poor grasp of the language or sensory impairment The extent to which these factors interact to generate adverse conditions may differ across the lifespan Recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and executive abilities such as updating and inhibition Further frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension To date less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions It has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in long term memory Recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory It is likely that the episodic buffer plays a key role in communication under adverse conditions The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches This will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication As such this topic belongs firmly within the field of Cognitive Hearing Science Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan Such exchange is the forerunner of broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication Such measures might be implemented in relation to the built environment the design of hearing aids and public awareness

Sinusoids Prem K. Kythe, 2014-07-08 A Complete Treatment of Current Research Topics in Fourier Transforms and Sinusoids Sinusoids Theory and Technological Applications explains how sinusoids and Fourier transforms are used in a variety of application areas including signal processing GPS optics x ray crystallography radioastronomy poetry and music as sound waves and the medical sciences With more than 200 illustrations the book discusses electromagnetic force and sychrotron radiation comprising all kinds of waves including gamma rays x rays UV rays visible light rays infrared

microwaves and radio waves It also covers topics of common interest such as quasars pulsars the Big Bang theory Olbers paradox black holes Mars mission and SETI The book begins by describing sinusoids which are periodic sine or cosine functions using well known examples from wave theory including traveling and standing waves continuous musical rhythms and the human liver It next discusses the Fourier series and transform in both continuous and discrete cases and analyzes the Dirichlet kernel and Gibbs phenomenon The author shows how invertibility and periodicity of Fourier transforms are used in the development of signals and filters addresses the general concept of communication systems and explains the functioning of a GPS receiver The author then covers the theory of Fourier optics synchrotron light and x ray diffraction the mathematics of radioastronomy and mathematical structures in poetry and music The book concludes with a focus on tomography exploring different types of procedures and modern advances The appendices make the book as self contained as possible
