Ichikawa, 1996-01-01 During the last few years interest in research on the progression of chronic renal diseases has grown to the extent that this field is now in the mainstream of investigative nephrology This interdisciplinary volume brings together the latest data from institutes at the forefront of current research The contents cover a diverse range of topics including apoptosis in renal modeling and remodeling the role of cytokines growth factors and macrophages the metabolism of interstitial collagen and collagenous materials diabetic nephropathy and vasoactive substances in renal injury The use of methodology from morphometry to DNA recombinant technology illustrates the wide range of experimental approaches being adopted Stimulating and up to date this book is essential reading for nephrologists biochemists molecular biologists and all investigators interested in the mechanisms of renal disease progression **Lipids and the Kidney** W. F. Keane, W. H.

Hörl, B. L. Kasiske, Claudio Ronco, 1997 During the past decade experimental and clinical studies have suggested that dyslipidemia may be an important risk factor for the progression of renal disease This volume explores in great detail recent advances in our understanding of the pathogenesis and treatment of this common complication of progressive renal injury In

the experimental investigations presented emphasis is placed on specific disturbances of lipids that are seen in progressive renal disease including the effects of oxidatively modified lipoproteins and Lp a on various functions of the glomerular cells Clinical studies have identified dyslipidemia as a risk factor for progressive renal disease in diabetes mellitus various non diabetic renal diseases and most recently in patients with progressive renal allograft loss An emerging interest in the genetics of dyslipidemia has recently arisen and this topic as it specifically relates to progressive renal disease is discussed The final section of the book offers new insights into the mechanisms of action of antilipemic therapy used in the treatment of dyslipidemia This volume should be read by all nephrologists caring for patients with progressive renal disease and by physicians interested in the biology of lipids diabetes and essential hypertension

**Kidney Transplantation, Bioengineering, and Regeneration** Giuseppe Orlando, Giuseppe Remuzzi, David F. Williams, 2017-06-08 Kidney Transplantation Bioengineering and Regeneration Kidney Transplantation in the Regenerative Medicine Era investigates how the field of regenerative medicine is changing the traditional premises of solid organ transplantation specifically within the field of kidney transplantation In Section I chapters illustrate the state of the art in kidney transplantation as well as the research behind the bioengineering and regeneration of kidney organoids for therapeutic renal replacement In Section II chapters catalog the technologies that are being developed and the methods that are being implemented to bioengineer or regenerate kidneys in order to restore function while critically highlighting those technological advances which hold the most promise The book thus encompasses clinical renal transplantation tissue engineering biomaterial sciences stem cell biology and developmental biology as they are all applied to the kidney Focuses on the synergy between renal organ transplantation and regenerative medicine highlighting the advances within transplantation bioengineering regeneration and repair Educates the transplant community on important regenerative medicine research pertinent to kidney transplantation Develops a shared language for clinicians surgeons and basic researchers to reach across the fields of transplantation and regenerative medicine and facilitate more productive investigation and research Catalogs the technologies being developed and methods being implemented to bioengineer or regenerate kidneys to restore function

Experimental Models for Renal Diseases G. A. Herrera, 2011-01-14 Our understanding of the pathogenesis of renal diseases and the ability to accurately classify and diagnose them has improved considerably over the last two decades Until now however this information has not been available in a single up to date and succinct yet comprehensive source The publication at hand aims at filling this gap condensing a vast amount of information into easily accessible chapters After a discussion of basic concepts and principles of renal tissue reactions to injurious agents using a specific cell compartment approach a multitude of disorders are looked at including renal interstitial fibrosis glomerulosclerosis various forms of glomerulonephritis and nephropathy amyloidosis and renal Fanconi syndrome Some of the chapters address controversial subjects reporting the current situation and showing areas of future potential research interest At the end of many of the contributions a summary is provided often in the form of

a chart to facilitate the understanding of the information and to make it most useful for didactic purposes This book is intended for students of various disciplines as well as clinicians and investigators and all those trying to correlate basic research information with clinical issues      **Glomerulopathies:Cell Biol/Imm** Wardle,1996-04-01 The glomerulopathies are the diseases affecting the filtering units of the kidneys In *Glomerulopathies Cell Biology and Immunology* the author details how recent advances in cell biology and immunology are able to advance our understanding such that we should be able to ameliorate or even arrest the course of these diseases In addition to discussing the fundamental concepts the book covers recent advances pertinent to the pharmacological and clinical management of glomerulonephritides and diabetic nephropathy The book uses a blend of basic science and clinical and experimental findings in a way that is suitable both for trainees in medical science and professional nephrologists      *Renal Fibrosis: Mechanisms and Therapies* Bi-Cheng Liu,Hui-Yao Lan,Lin-Li Lv,2019-08-09 This book systemically presents the latest research on renal fibrosis covering all the major topics in the field including the possible mechanisms biomarkers and strategies for prevention and treatment of chronic kidney disease CKD Due to its high prevalence CKD represents a huge global economic and social burden Irrespective of the initial causes CKD progresses to end stage kidney disease ESKD due to renal fibrosis which is characterized by glomerulosclerosis tubule atrophy and atresia and the excessive accumulation of extracellular matrix ECM in the kidney Unfortunately an estimated 1% 2% of the adult population living with CKD will need renal replacement therapy at some point as a result of ESKD As such strategies for preventing or slowing CKD progression to ESKD are of utmost importance and studies aiming to understand the mechanisms of renal fibrosis have been the focus of intensive research Recently novel insights into the pathophysiological processes have furthered our understanding of the pathogenesis of renal fibrosis and more importantly promoted studies on the early diagnosis and treatment of CKD This book draws lessons from the extensive state of the art research in this field elaborating the new theories and new techniques to offer readers a detailed and comprehensive understanding of renal fibrosis and as well as inspiration for future research directions
