Extraction and Exploitation of Intensional Knowledge from Heterogeneous Information Sources Domenico

Ursino,2003-07-31 The problem of integrating multiple information sources into a unified data store is currently one of the most important challenges in data management Within the field of source integration the problem of automatically generating an integrated description of the data sources is surely one of the most relevant The significance of the issue can be best understood if one considers the huge number of information sources that an organization has to integrate Indeed it is even impossible to try to do all the work by hand Like other important issues in data management the problem of integrating multiple data sources into a unique global system has several facets each of which represents per se an interesting research problem and comprises for instance that of recognizing at the intensional level similarities and dissimilarities among scheme objects that of resolving representation mismatches among schemes and that of deciding how to obtain an integrated data store out of a set of input sources and of a semantic description of their contents The research and application relevance of such issues has attracted wide interest in the database community in recent years And as a consequence several techniques have been presented in the literature attacking one side or another of this complex and multifarious problem

Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him.
