Committee, 1961 *Economic Education* United States. Congress. Joint Economic Committee. Subcommittee on Economic Progress, 1967 **An International Perspective on Economic Education** William B. Walstad, 2012-12-06 Economics is

taught in some form in the secondary schools of nations throughout the world The subject is rarely taught in elementary schools and while economics courses are offered in universities the majority of students end their formal education with secondary school Thus the best opportunity for the economic education of the youth of a nation occurs in secondary schools

This book examines economic education at this critical level of the educational system. The teaching of economics in secondary schools varies across countries. These differences occur because of history, the structure of education, and other national factors. At the same time, there are common elements in the economic education of many countries, especially in content coverage. This contrast between the common features and the uniqueness of economic education in secondary schools of major industrial nations exemplifies the international perspective presented in this book. The international perspective is developed in the six sections of the volume. The first section discusses why nations should include economics in school curricula and presents a framework for teaching economics that should have global appeal. Dissension and consensus on economic issues among North American and European economists are examined in the second section. The third section surveys the U.S. research literature on precollege economic education and assesses the current state of economics instruction in U.S. schools. The economics curricula and educational practices in seven other nations—the U.K., Canada, Japan, Germany, Austria, Korea, and Australia—are described in the fourth and fifth sections. The fifth section also presents international comparisons of economic understanding based on national testing in six of those nations. The sixth and final section explores the role of economic education in centrally planned economies and its effects on the transition to a market economy, using Russia, Bulgaria, and China as case studies.

Econometric Modeling in Economic Education Research

William E. Becker Jr., Rolf A. Walstad, 2012-12-06. Since its establishment in the 1950s, the American Economic Association's Committee on Economic Education has sought to promote improved instruction in economics and to facilitate this objective by stimulating research on the teaching of economics. These efforts are most apparent in the sessions on economic education that the Committee organizes at the Association's annual meetings. At these sessions, economists interested in economic education have opportunities to present new ideas on teaching and research and also to report the findings of their research. The record of this activity can be found in the *Proceedings of the American Economic Review*. The Committee on Economic Education and its members have been actively involved in a variety of other projects. In the early 1960s, it organized the National Task Force on Economic Education, which spurred the development of economics teaching at the precollege level. This, in turn, led to the development of a standardized research instrument, a high school test of economic understanding. This was followed later in the 1960s by the preparation of a similar test of understanding college economics. The development of these two instruments greatly facilitated research on the impact of economics instruction, opened the way for application of increasingly sophisticated statistical methods in measuring the impact of economic education, and initiated a steady stream of research papers on a subject that previously had not been explored.

Innovations in Economic Education Mary Beth Henning, 2016-11-25. *Innovations in Economic Education* addresses the growing issue of financial illiteracy by showing how economics can be successfully integrated into classrooms from kindergarten through higher education. Pre-service teachers, experienced educators, curriculum leaders, parents, and school administrators will find practical ideas to improve economic

understanding At the elementary level the book provides creative ways of introducing young students to the basic concepts of economics financial justice and social action For higher grade levels the book offers ideas to integrate economics into current history civics and math curricula The final portion of the book features recommendations by leading economic educators on how economics can play a greater role in teachers professional development The pedagogical tools presented in each chapter include lesson plans and practical insights and are designed to meet the NCSS C3 Framework and Common Core State Standards for Social Studies This book is a timely and valuable resource for all educators interested in improving their students economic literacy and financial decision making

The Future of Education and Labor Gerald Bast,Elias G. Carayannis,David F. J. Campbell,2019-12-10 This book explores the ways in which education impacts labor markets Specifically the contributions in this book indicate that the future of labor is creative socially aware and inter disciplinary while identifying the changes and innovations needed in our educational systems to meet this demand Due to an increasing automatization robotic manufacturing the character of labor and work in general will change dramatically in the near future This will be the case not only in the western countries but also in the larger emerging economies in Asia for example China and India While societal environments economy and the character of labor are increasingly in a process of dramatic changes the educational systems and the leading principles of research about labor and employment are not changing adequately Cross disciplinary inter disciplinary and trans disciplinary thinking and learning is not the main focus of our educational systems Consequently the systems of academic research follow and apply disciplinary or even sub disciplinary strategies avoiding cross disciplinary research approaches and not supporting inter disciplinary academic career models This book introduces such strategic models to better prepare the next generation of workers for the new knowledge economy and the future of democratic societies
