**Supplements to the Economics of Household Behavior** Susan van Velzen, 2001 **Housing Markets and Household Behavior in Japan** Miki Seko, 2019-05-08 This book addresses essential questions about housing by building theoretical models based on various real world problems in Japan and testing these models using econometric methods Almost all related empirical analyses use Japanese household longitudinal data Accordingly the author analyzes whole aspects of the data based on an understanding of the actual situation theory and empirical analysis to directly derive a vision of a future housing policy Why are houses expensive and difficult to obtain in Japan Why do people have to live in small houses Why do people not relocate frequently Why is the earthquake insurance subscription rate so low particularly in an earthquake prone country such as Japan even after such a catastrophic event as the Great East Japan Earthquake of 2011 How do existing housing finance and tax policies or laws relate to these real world problems To answer these questions the book clarifies the unique criteria that characterize housing problems in Japan and presents a vision of future housing policy The short answer is that existing housing finance policy that adopts criteria based on the floor space of houses creates incentives for people to live in even smaller houses Furthermore the Japan Rental Act which affects people renting homes reduces residential mobility The incidence of underinsurance against earthquake risk is a result of earthquake insurance market imperfections such as crude and rough geographical risk ratings The book elaborates on these factors in four parts and will be of interest to all readers who are concerned with the housing market and household behavior in Japan

*Handbook of Population and Family Economics* M.R. Rosenzweig, Oded Stark, 1997-04-23 Comprises 21 articles that survey areas of research in population and family economics **The Household in the Economy** Pasquale De Marco, 2025-08-08 This book provides a comprehensive introduction to the field of household economics It explores the various factors that influence household decision making including income wealth preferences and expectations The book

also discusses the role of gender time allocation and risk in household economics One of the key insights from household economics is that households are not simply passive recipients of income Instead they are active decision makers who allocate their resources in ways that they believe will maximize their well being Households make decisions about how much to consume how much to save how much to work and how to invest their money These decisions are influenced by a variety of factors including the household's income its wealth its preferences and its expectations about the future Households also face a variety of constraints such as the availability of resources the prices of goods and services and the policies of the government Despite these constraints households are able to make choices that allow them to achieve their goals For example a household may choose to save money in order to buy a house or it may choose to work more hours in order to earn more income Households also make choices about how to allocate their time such as how much time to spend on work leisure and childcare The decisions that households make have a significant impact on their well being For example households that save more money are more likely to be able to afford a comfortable retirement Households that work more hours are more likely to be able to earn a higher income And households that spend more time on leisure are more likely to be happier This book provides a comprehensive overview of the field of household economics It is essential reading for anyone who wants to understand how households make decisions and how these decisions affect their well being If you like this book write a review
