Economics Of Automatic Testing:

Economics of Electronic Design, Manufacture and Test M. Abadir,T. Ambler,2013-06-29 The general understanding of design is that it should lead to a manufacturable product Neither the design nor the process of manufacturing is perfect As a result the product will be faulty will require testing and fixing Where does economics enter this scenario Consider the cost of testing and fixing the product If a manufactured product is grossly faulty or too many of the products are faulty the cost of testing and fixing will be high Suppose we do not like that We then ask what is the cause of the faulty product There must be something wrong in the manufacturing process We trace this cause and fix it Suppose we fix all possible causes and have no defective products We would have eliminated the need for testing Unfortunately things are not so perfect There is a cost involved with finding and eliminating the causes of faults We thus have two costs the cost of testing and fixing we will call it cost 1 and the cost of finding and eliminating causes of faults call it cost 2 Both costs in some way are included in the overall cost of the product If we try to eliminate cost 1 cost 2 goes up and vice versa An economic system of production will minimize the overall cost of the product Economics of Electronic Design Manufacture and Test is a collection of research contributions derived from the Second Workshop on Economics of Design Manufacture and Test written for inclusion in this book *The Economics of Automatic Testing* Brendan Davis,1994 This work is based upon the concept that the optimum strategy for electronics testing can only be established after a detailed economic analysis of the alternatives The first seven chapters deal with issues that have to be considered when making decisions about testing including the key roles of quality and time to market in today s industrial companies Chapter eight describes the analytical approaches that can be used to make these decisions while the remaining four chapters deal with the post decision activities such as the evaluation of commercial testers the financial justification and the presentation to senior management of the proposals Economics and Law of Artificial Intelligence Georgios I. Zekos,2021-01-11 This book presents a comprehensive analysis of the alterations and problems caused by new technologies in all fields of the global digital economy The impact of artificial intelligence AI not only on law but also on economics is examined In the first part the economics of AI are explored including topics such as e globalization and digital economy corporate governance risk management and risk development followed by a quantitative econometric analysis which utilizes regressions stipulating the scale of the impact In the second part the author presents the law of AI covering topics such as the law of electronic technology legal issues AI and intellectual property rights and legalizing AI Case studies from different countries are presented as well as a specific analysis of international law and common law This book is a must read for scholars and students of law economics and business as well as policy makers and practitioners interested in a better understanding of legal and economic aspects and issues of AI and how to deal with them

The Regional Economics of Technological Transformations Roberta Capello,Camilla Lenzi,2021-08-30 The Regional Economics of Technological Transformations provides a comprehensive overview of 4 0 technological transformations in

Europe and their socio economic impact with a particular emphasis on the regional dimension of the phenomena The authors employ extensive original data and robust quantitative methods to analyse technological change in all regions of the 27 EU countries plus the UK and shed light on this trend for Europe and beyond Structured in four parts the book first looks at conceptual definitions empirical measurements and expected impacts on both the economic performance GDP and productivity growth and the labour market and then moves on to analyse where 4 0 technological transformation actually takes place in Europe and the reasons for this Next it offers original empirical evidence on the impacts of the different transformations and of their intertwined effects on both the economy and the society Finally the book explores the policy implications of this technological transformation This book will be valuable reading for advanced students researchers and policymakers working across regional economics industrial economics and innovation policy It will be of primary interest to regional scientists interested in the field who may enjoy the conceptual and empirical solutions to the study of a very complex timely and still largely unexplored theme Sociologists engineers and political economists can benefit from the book s analysis noting the urgency of the development of new ethical rules governing the new digital and labour markets Finally the book may appeal to policymakers interested in opportunities to increase regional competitiveness and sustainability goals through the advent of 4 0 technologies
